Proceedings of
The Eighth International Congress
on Sound and Vibration 2001

Volume 1

Editors:
L. Cheng, K. M. Li and R. M. C. So
# TABLE OF CONTENTS

## VOLUME 1

### Keynote Lecture

**Systems Approach to the Acoustical Design, Construction and Maintenance of Railways in Hong Kong**  
*Glenn Frommer* ................................................................. 1

**The Challenge to Break the Ultimate Noise Barrier: Sources and Control of Airframe Noise**  
*Hanno Heller, Werner Dobrzynski* ........................................... 9

**Feedback in Active Noise Control**  
*Jing Tian, Li Xiaodong* .................................................... 23

**The Physics of Reverberation**  
*Jie Pan* ........................................................................ 33

**Wave Propagation and Sound Transmission in Sandwich Composite Plates**  
*Anders Nilsson* ................................................................. 44

**Auditory Mechanics**  
*Hiroshi Wada* ................................................................. 61

### Acoustical transducer and measurement

**Optical Measurement of Strong Sound Waves Using Background Schlieren (B0S)**  
*Gerd E. A. Meier* ............................................................... 71

**Development of Promising Acoustic-Emission Sensors**  
*A.A. Bazhenov, V.I. Yarovikov, L.F. Drozdova* ....................... 77

**Comparison of Reference Image Generation Techniques for Projection Movie Interferometry**  
*Debasish Mishra, Jonathan D. Blotter* ................................... 87

**Acoustical Measurements for Noise Control**  
*Gunnar Rasmussen* ............................................................ 95

**Noise Source Localization Using Diffraction Phenomena of Spherical Probe**  
*H. S. Na, J. C. Patrat* ....................................................... 103

**A Novel Type of Flat Electrodynamic Acoustic Transmitter for Flow Medium**  
*Valery M. Tsaplev* ............................................................. 111

**Dynamic Focusing Using a Unique Transducer and Time Reversal Process**  
*R. K. Ing, S. Catheline, N. Quieffin, M. Fink* ......................... 119

**System for Measurement of Microphone Distortion and Linearity from Medium to Very Highlevels**  
*Erling Frederiksen* ............................................................ 127

**Calculating the Sound Field in an Acoustic Intensity Probe Calibrator - A Practical Utilization of Boundary Element Modelling**  
*Erling Sandermann Olsen, Vicente Cutanda, Johan Gramtorp, Anders Eriksen* .......................... 135
Measurement of Acoustic Intensity in a Near Field Space Needs of Avoiding Scattering by Measuring Instruments

Fujihiko Sakao ................................................................. 143

New Microphone Technologies

Peter J. Henning .................................................................. 151

Beamforming-based Partial Field Decomposition in Nearfield Acoustical Holography

W. H. Lee, E. S. Hwang, Yeon June Kang .................................. 155

Active noise control

Status and Future Research Directions of Active Noise and Vibration Control

Kam W. Ng ........................................................................... 161

Active Sound Transmission Control for a Weak Panel - Cavity Coupled System through a Elastically Supported Flexible Boundary

S.K. Lau, S.K. Tang .................................................................. 169

Investigation of Non-linear Dynamics of the Echo Path for Voice Echo Cancellers

Edin Begic, M.O. Tokhi .......................................................... 177

Robust Active Noise Control in a Finite Duct by Separation of Traveling Waves

S. Liu, J. Yuan, K. Y. Fung ...................................................... 183

The Z-domain Adaptive Modeling of Finite-Length Acoustic Waveguide Fed by the Loudspeaker (with Application on Active Noise Control)

Branko Somek, Martin Dadic, Sinisa Fajt .................................. 191

The Optimal Configurations of Control System in Free Field

Jun Yang, Tan See-Ee, Gan Woon-Seng, Zhang Ming ....................... 199

A Model Free Frequency Domain Self-Tuner for Active Sound and Vibration Control

Thomas Meurers, M. Veres Sandor ............................................ 207

Analysis of the Convergence Characteristics of a Multiple Channel ANC System

Guoyue Chen, Masato Abe, Toshio Sone .................................... 215

Periodic Disturbance and Noise Rejection Method Using Adaptive Feedforward Controller

H. S. Na, Youngjin Park ........................................................ 221

Hybrid Adaptive Active Noise Control System

Sen M. Kuo, W. S. Gan .......................................................... 229

A New Full Adaptive Algorithm for Active Noise Control in the Presence of Acoustic Feedback

Xiaojun Qiu, Colin H. Hansen ................................................ 237

Performance Analysis of an LMS Magnitude/Phase Adjuster for an Active Noise Controller

Yegui Xiao, Naoko Tani, Akira Ikuta ....................................... 245

Performance Analysis of FXLMS Algorithm with Secondary Path Modelling Error

Duan-Shi Chen, Xu Sun .......................................................... 253
Active Noise Control with Virtual Sensors

Colin D. Kestell, Colin H. Hansen

Active Noise Control in Rectangular Rooms

Jingnan Guo, Jie Pan, M. Hodgson

Integrated Headsets Using the Adaptive Feedback Active Noise Control System

Seng Gan Woon, Sen Mow Kuo

A Method for Calculating the Coherence Coefficient for Active Control of Traffic Noise Transmission Through an Opening Window into a Rectangular Room in High-Rise Buildings

Jiping Zhang, Weikang Jiang, Ningrong Li

Active Control of Engine Induced Noise in a Naval Application

Mathias Winberg, Sven Johansson, Thomas Lag

Active vibration control

Active Control of Machine-Tool Vibration in a CNC Lathe Based on an Active Tool Holder Shank with Embedded Piezo Ceramic Actuators

Linus Pettersson, Lars Hakansson, Ingvar Claesson, Sven Olsson

Hybrid Vibration Isolation with Thunder Actuators

J.-P. Marouze, L. Cheng, P. A. Gauthier

Active Cluster Control of a Planer Structure

Nobuo Tanaka

Active Vibration Control to Reduce the Low Frequency Vibration Transmission Through an Existing Passive Isolation System

Jin W. Lee, Xun Li, Ben S. Cazzolato, Colin H. Hansen

Active Damping for Gantry Milling Machines

Christian Ehmann, Schonhoff Ulrich, Nordmann Rainer

Feedback-LMS Control of Lateral Vibration in a Train Car

Per Persson, S. Johansson, L. Hakansson, L. Claesson, T. Samuels

Experimental Study on Vibration Control of Flexible Rotor System by Magnetorheological Fluid Damper

Guang Meng, Wang J. X.

Robust Vibration Control of Flexible Structures Using the Hoo-Based Controller with Model Error Compensator

Der-An Wang, Yi-Mei Huang

Variable Structure Control for Linear and Non-Linear Vibrating Structures Theoretical & Experimental Results

Tri-Tan Van Can, Fanggao He, Karl Sammut, Lei Chen

PD-PI-Type Fuzzy Logic Vibration Control of Flexible-Link Manipulators

N. H. Siddique, M. O. Tokhi

Sinusoidal Reference Strategy for Adaptive Feedforward Control of Wind-Excited Super-Tall Buildings

Fujun Peng, Ming Gu, Hans-Jurgen Niemann

Pole-placement Control of a Smart Vibrating Beam

R. G. Scott, M. D. Brown, M. C. Levesley
A Study of a Generalised Active Vibration Clamping and Shock Absorber
Lei Chen, Fangpo He, Karl Sammut, Tri-Tan Van Cao .................................................. 395

Optimal Design of Engine Mount Using an Enhanced Genetic Algorithm and Simplex Method
Young Kong Ahn, Young-Chan Kim, Bo-Suk Yang, Mehdi Ahmadian, Woon Kyung Baek ............. 403

A Study of Dynamic Analysis and Design of Engine Mount Systems
Hong Jae Yim, Sang Beom Lee ................................................................. 411

Design Sensitivity Analysis and Optimization of an Engine Mount System using the FRF-based Substructuring
Doo-Ho Lee, Woo-Seok Hwang, Chan-Mook Kim ................................................. 419

Design of an Active Mount for a Compact Engine
Ronnie Leung ........................................................................................................... 427

Effects of Non-linearity on an X-LMS Active Vibration Isolation Platform Using Piezo-stacks Actuators Modelling and Experiments
Alain Berry, Yann Pasco ...................................................................................... 435

Aeroacoustics

Flow Induced Vibration of Blades In a Cascade
Yin Lung Lau, M. C. Ronald So, R. C. K. Leung ...................................................... 443

Weakly Compressible and Incompressible Navier-Stokes Equations for Hydrodynamic and Hydroacoustic Problems
San-Yih Lin, Shen Min Liang, Jeu-Jiun Hu .......................................................... 451

Supression of the Vibrational Noise Disturbances in Measuring the Turbulence Parameters
Grigory A. Fedotov ................................................................................................. 459

On Fully Staggered-mesh Higher Order Schemes and Finite-volume CFD Methods for Aerodynamic Sound Simulation
G. S. Djambazov, Choi Hong Lai, K. A. Pericleous .................................................. 463

Noise Generation by Rotating Staff and Surge in a Vacuum Cleaner Suction Unit
Mirko Cudina, Jurij Prezelj .................................................................................. 471

PIV Applied to Acoustical Phenomena
J. A. Cosgrove, J. M. Buick, D. M. Campbell, C. A. Greated ........................................ 479

Numerical Investigation of Eigen Oscillations near the Honeycomb in the Channel
Alexander Makarov .................................................................................................. 487

Ship Propeller: Theoretical and Experimental Approach to Noise Performance Evaluation
Bruno Bardi, Enrico Ferrari, Ottavio Pinto, Cesare Tarditi ........................................ 495

Frequencies of Aerodynamically Generated Discreet Tones from a 15 m Diameter Wind Turbine
Yoshinori Nii ............................................................................................................. 501

An Investigation of Subsonic Cavity Flows Using Simultaneous PIV and Pressure Measurements, with Comparison against CFD
Graham Ashcroft, Chan Sammie, Zhang Xin ......................................................... 509

The Interaction of Noise and Vibration in Vehicles
Klaus Genuit ............................................................................................................. 517
Experimental Identification of Aerodynamic and Vibroacoustic Noise in Small Axial-Flow Fans
   T. L. George Chong, Renjing Cao, Lixi Huang ................................................................. 669

Aeroacoustic Analysis of Panel Flutter
   Lixi Huang ......................................................................................................................... 677

Flow Field in the Semi-Cylindrical Cavity with Self Excited Aerodynamic Tone
   Maruta Yoshiyuki .................................................................................................................. 685

Aerodynamic Sound Generated by a Coaxial Circular Tube in an Axisymmetric jet — Effect of Absence by Acoustic Resonance
   Sakao Fujihiko ..................................................................................................................... 693

Experimental Study on Noise Generated from Louver exposed to Flow
   Kunihiko Ishihara ............................................................................................................... 701

Scaling Laws of Hydrodynamic Noise Generation for Simple Fluid Valve Mode
   Matjaz Prek ......................................................................................................................... 709

Acoustic Scattering by Complex Geometry Using CAA-Chimera Method
   Jianping Yin, Jan Delfs ......................................................................................................... 717

Suppression of the Self-Induced Oscillations of the Underexpanded Jets Impinging Upon An Object
   H. D. Kim, H. S. Kim, H. Kashimura, T. Yasunobu, T. Setoguchi ........................................ 725

Interaction Noise Computations in Axisymmetrical Turbofan Inlets
   Cyril Polacsek ....................................................................................................................... 733

Computation of Broadband Noise Radiated by a Ducted Fan
   Serge Lewy ......................................................................................................................... 741

VOLUME 2

Architectural acoustics and noise in buildings

Analysis of Reverberation Time Values in Churches According to Country and Architectural Style
   Victor Desarneau, Antonio P.O. Carvalho ............................................................................... 749

Challenge for the Auditorium Acoustics in 21st Century
   Albert Xu .............................................................................................................................. 757

Finite Element Sound Field Analysis of Rooms in Built Environment
   Toru Otsuru, Reiji Tomiku, Miki Toyomasu, Yasuo Takahashi .............................................. 765

Investigation on Diffusion of Sound Fields in Reverberation Rooms by Finite Element Method
   Reiji Tomiku, Toru Otsura, Yasuo Takahashi, Keishi Tonaka ............................................... 773

The Application of Acoustic Simulation to the Design of a Reverberation Room for Gas-Fired Boilers Noise Testing
   Antonio Calabrese ............................................................................................................... 781

Two Type Measurements for Reverberation Time of Noisy Acoustic Room based on the Difference of State Equation and Estimation Method
   Kimjnobu Nishimura, Mitsuo Ohta ..................................................................................... 789
