Fractal properties of earthquake ground motions in Japan
T. Takahashi, K. Takanashi & T. Tanabe

Formulation of nonlinear LRFD and its application to codified design
T. Takada & K. Yamaguchi

Parametric identification of an isolated bridge
R.Y. Tan & H.C. Huang

Importance sampling method for time-dependent reliability analyses with Poisson white noises
H. Tanaka

Damage to small earth dams by heavy rainfall in Japan
S. Tani

Spatial variability of soil properties in slope stability analysis: Fragility curve generation
J. Tantalla, J.-H. Prevost & G. Deodatis

Hydrologic fragility assessment of concrete gravity dams
P.B. Tekie & B.R. Ellingwood

Probabilistic finite element analysis of the lower cervical spine under eccentric loading
B.H. Thacker, D.P. Nicoletta, S. Kumarasen, N. Yoganandan & F.A. Pintar

Corrosion crack based assessment of the life-cycle reliability of concrete structures
P. Thoft-Christensen

Monitoring based maintenance for civil engineering structures
L. Thompson, B. Westerno & M. Tominaga

Optimization of structure integrity and maintenance control
S.A. Timashev

Equivalent cubicization for nonlinear systems
M.A. Tognarelli & A. Kareem

Reliability-based life-cycle cost analysis of reinforced concrete structures in marine environments
D.V. Val & M.G. Stewart

Alternative approach to random digits utilization for reliability assessments
T. Vanura

Estimation of seismic hazard in territory of Southern Finland
P. Varpasuo

Generation of design ground motion time histories for the Lianyungang NPP
P. Varpasuo & P.H.A.J.M. van Gelder

Probabilistic seismic safety assessment for Leningrad Nuclear Power Plant
P. Varpasuo

Moment-based fatigue load models for wind energy systems
P.S. Veers, L. Manuel, L.M. Fitzwater & S.R. Winterstein

Increased reliance on analysis for certification of aircraft structures
D. Veley, C. Pettit & D. Holzwarth

Definition of acceptable risk in flood-prone areas
H.G. Voorman, P.H.A.J.M. van Gelder, J.K. Vrijling & M.D. Pandey

Developments towards full probabilistic design codes
A.C.W.M. Vrouwenvelder

Traffic loads on bridges in the Netherlands based on recent traffic measurements
T. Vrouwenvelder & P. Waarts

Cracking and spalling reliability analysis considering spatial variability for reinforced concrete structures
K.A.T. Vu & M.G. Stewart

Seismic reliability analysis of a single-story L-shaped woodframe building
C.H. Wang, G.C. Foliente & P. Paevere

On reliability of corrugated steel web in prestressed concrete box girder bridges
E. Watanabe, T. Kadotani, M. Miyauchi, M. Tomimoto & M. Kano

Probabilistic-based performance prediction for HMA pavements
B.N. Whitten, K.C. Chou & N.M. Jackson
FPKTOOL: A computational framework for the vibration of GWN-driven SDOF systems
S.F. Wojtkiewicz & L.A. Bergman  
Numerical solution of high dimensional Fokker-Planck equations
S.F. Wojtkiewicz & L.A. Bergman  
Symptom based reliability in health-monitoring
F.S. Wong & J.T.P. Yao  
Estimating probability of structural failure using energy method
K.K.F. Wong & Y. Wang  
Earthquake ground motion simulation for Mid-America cities
C.L. Wu & Y.K. Wen  
Application of the empirical model decomposition and the Hilbert spectrum to the identification of building seismic response data
T.S. Wu, C.H. Loh & N.E. Huang  
A reliable capacity-spectrum method
Q. Xue  
Nonlinear static analysis for capacity evaluation of various structural systems
A. Yakut, N. Kishi & J. Song  
Redundancy and reliability of engineering systems with information entropy
K. Yamamoto, H. Ohto & M. Hoshiya  
Hull girder strength of a tanker under longitudinal bending considering strength diminution due to corrosion
N. Yamamoto & T. Yao  
New development of super-dense seismic monitoring and damage assessment system for city gas networks
F. Yamazaki, Y. Shimizu, W. Nakayama, K. Kogamekaru, E. Ishida & R. Isayama  
Dynamic modeling and performance considerations on large-scale MR fluid dampers
G. Yang, B.F. Spencer Jr., J.D. Carlson & M.K. Sain  
Optimal performance-based design of passive energy dissipation systems
J.N. Yang, S. Lin & A.K. Agrawal  
Identification of nonlinear systems via Hilbert transform using free vibration measurements
J.N. Yang & Y. Lei  
Seismic reliability analysis for highway network system
S.C. Yeh & C.H. Loh  
Hybrid directional simulation for structural reliability estimation
M. Yonezawa, Y.-T. Park & S. Okuda  
Damage detection using Monte Carlo filter based on non-Gaussian noise
I. Yoshida  
Seismic risk assessment procedures for a system consisting of distributed facilities
Part two: Seismic hazard modeling
S. Yoshida, Y. Imazuka & M. Mizutani  
Importance sampling method with kernel density estimate – A general approach
L. Yu & P.K. Das  
Probabilistic system identification for nonlinear systems with uncertain input
K.-V. Yuen & J.L. Beck  
Bayesian time-domain methodology for identification of modal parameters from ambient data
K.-V. Yuen & L.S. Katafygiotis  
Semi-active control of wind-induced vibration of tall building using magneto-rheological damper
C.-B. Yun, J.-I. Gu, S.B. Kim & Y.-S. Kim  
Bias in axial capacity of single bored piles arising from failure criteria
L.M. Zhang & W.H. Tung  
Non-destructive inspection and fatigue reliability updating
R. Zhang & S. Mahadevan  
Moment approximations for system reliability evaluation
Y.-G. Zhao & T. Ono

XVII
Microstructure simulation and reliability analysis
Y. Zhao & S. Mahadevan

Stochastic fracture mechanics based fatigue damage assessment for short crack growth
Z. Zhao & I.R. Orisamolu

Stochastic optimal control of reliability of quasi non-integrable Hamiltonian systems
W.Q. Zhu, Z.L. Huang & M.L. Deng

System behavior of post-tensioned beam bridges – An experimental study
A. Znidaríč, F. Moses & M. Ghosn
