Christian Leibundgut, Stefan Uhlenbrook, Jeff McDonnell (Eds.)

Runoff Generation and Implications for River Basin Modelling

Proceedings of the International Workshop on Runoff Generation and Implications for River Basin Modelling 9-12 October 2000, Freiburg i. Br., Germany

The Workshop was jointly convened by
International Association of Hydrological Sciences (IAHS)  
International Commission on Tracers (ICT)  
International Commission on Surface Water (ICSW)  
IHP/OHP-FRIEND/ERB National Working Group

2001

Institut für Hydrologie der Universität Freiburg i. Br.
Contents

Session 1: Physical processes and mechanisms of stream flow generation at the catchment scale

Foreword to the special issue: Runoff generation and implications for river basin modelling
*Stefan Uhlenbrook, Jeff McDonnell, Chris Leibundgut* 1

A decision scheme to identify dominant flow processes at the plot-scale for the evaluation of contributing areas at the catchment-scale
*Simon Scherrer, Felix Naef* 11

Spatial variability and scale dependent runoff generation
*Bernd Diekkrüger, Helge Bormann, Christian Renschler* 17

Soil moisture patterns and runoff generation in a small Dartmoor catchment, south-west England
*Erik Meyles, Andrew Williams, John Dowd, Les Ternan* 28

Space-time patterns of runoff generation in the Löhnersbach catchment
*Robert Kirnbauer, Günter Blöschl, Peter Haas, Gabriele Müller, Bruno Merz* 37

Neither macropores nor interflow: generation of spiky discharge peaks in small forested catchments and its implications on stream water chemistry
*Gunnar Lischeid* 46

Spatial distribution and temporal behaviour of dry weather flow components in a small drainage basin
*Steffen Möller, Wolfhard Symader* 54

The role of infiltration conditions on storm runoff generation at the hillslope and lower meso-scale
*Axel Bronstert, Daniel Katzenmaier* 60

Episodic rising in nitrate concentration of streamwater due to partial dieback of pine forest in Japan: Runoff generation processes as a controlling factor of the seasonality
*Nobuhito Ohte, Naoko Tokuchi, Masanori Katsuyama, Satoru Hobara, Yuko Asano, Keisuke Koba* 68

Evaluation of water residence times in small headwater catchments
*Yuko Asano, Taro Uchida, Nobuhito Ohte* 75

The use of cumulative data for characterising hydrological systems
*Chris Barnes* 82
Integrated approach of investigating and modelling runoff formation considering information from environmental and artificial tracer experiments

*Andreas Herrmann, Matthias Schöniger, Sybille Schumann* 90

Soil water variability and the conservation of wet, species-rich grasslands in Devon, United Kingdom

*Francien van Soest, Andrew Williams, Robert Parkinson* 98

Identification of hydrotopes in a small forested catchment (Dürreych, Black Forest, Germany)

*Guido Waldenmeyer, Markus Casper* 104

Soil moisture variability and land use in a seasonally arid environment

*A. G. Williams, J. L. Ternan, C. Fitzjohn, S. de Alba, A. Perez-Gonzalez* 111

**Session 2: Runoff generation processes at the hillslope and headwater scale**

A new conceptual model for hillslope runoff, ground-water and oxygen-18

*Jan Seibert, Allan Rodhe, Kevin Bishop* 118

Towards a better process representation of catchment hydrology in conceptual runoff modelling

*Jan Seibert, Jeff McDonnell* 128

Analysis of flowpath dynamics at a forested headwater catchment, central Japan

*Taro Uchida, Yuko Asano, Nobuhiro Ohte, Takahisa Mizuyama* 139

Experimental analysis of rainfall-runoff events in two small adjacent mountainous catchments

*Christoph Sambale, Gerd Peschke* 148

Runoff generation on artificial slopes from mined lands in a mediterranean-continental environment: Teruel coalfield, Spain

*José-Manuel Nicolau* 155

A study on ponding time and infiltration capacity during steady rainfall using a rainfall simulator

*Kazumasa Fujimura, Yoshihisa Ando, Fumio Yamada, Akihiro Nagaiwa* 161
Session 3: Process-oriented modeling at different scales

Internal validation of the HBV model
*Sten Bergström, Göran Lindström*

A knowledge-based system to improve the pre-processing of distributed precipitation-runoff models
*Sven Zimmermann, J. Töpfer, Gerd Peschke*

Modeling runoff generation in a forested catchment in southern Finland
*Harri Koivusalo, Teemu Kokkonen, Tuomo Karvonen*

Integrating tracer studies with semi-distributed models: Recent insights from a sub-arctic catchment in the Cairngorm Mountains, Scotland
*Chris Soulsby, Sarah M. Dunn, Rob Malcolm*

Non-calibrated models for the dry hydrologic regime – from the arid to the mediterranean zone
*Jens Lange, Chris Leibundgut, Samar Husary, Marwan A. Hassan, Asher P. Schick*

Modelling of runoff and its components and model validation in Swiss pre-alpine and alpine catchments
*Joachim Gurtz, Massimiliano Zappa, Karsten Jasper, Mark Verbunt, Alexandre Badoux, Tomas Vitvar, Herbert Lang*

Improving the representation of water balance and runoff processes in mesoscale hydrologic models for water management modelling
*Joachim Geyer, David C. Garen, Andreas H. Schumann*

Towards reduced conceptual rainfall-runoff modelling uncertainty
*Thorsten Wagener, Matthew J. Lees, Howard S. Wheater*

Optimizing land use management – a new approach for hydrologic modelling
*Manfred Fink, Sven Kralisc, Wolfgang-Albert Flügel, Clemens Beckstein*

Simulation of hydrological processes with the atmospheric land-surface scheme SEWAB
*Heinz-Theo Mengelkamp, Kirsten Warrach, Gerard Kiely*

Integrated water quality modeling by coupling client-server based DBMS, GIS and the solute model WASMOD (Water and Substance Model)
*Ulrike Bende-Michl*

Physically-based rainfall-runoff models: setbacks and solutions
*Tom H. M. Rientjes, Paolo Reggiani*
Extrapolating parameters of a conceptual catchment scale model to different catchments without calibration
*Sarah M. Dunn, Carmen Bernzen, Chris Soulsby, Rob Malcolm, Allan Lilly* 266

How far from the modelling optimum? Analysing a process-based catchment model by artificial neural networks
*Gunnar Lischeid, Stefan Uhlenbrook* 276

New studies for stream-subsurface hydrologic exchange (bank storage)
*Tobias Conradt, Matthias Schöniger* 284

Retrieval of hydrological parameters from remote sensing data
*Volker Hochschild* 292

A SVAT-scheme combined with a regionalized baseflow separation for large scale groundwater recharge modeling
*Volker Armbruster, Markus Haas, Christian Leibundgut, Siegfried Demuth* 298

Operational application of the water balance model LARSIM in the Neckar basin
*Manfred Bremicker, Kai Gerlinger* 306

Modelling water retention at forest sites as a tool for water management
*Wolfgang Bott, Thilo Hofmann, Dietmar Schenk* 313

**Session 4: Tracer and modeling studies for investigating runoff generation processes at different scales**

Modeling hydrologic responses in a small forested watershed by a new dynamic TOPMODEL (Panola Mountain, Georgia, USA)
*Norman E. Peters, James Freer, Keith J. Beven* 318

Effects of the variations of groundwater levels on the hydrochemical processes in a headwater catchment, Japan
*Masanori Katsuyama, Nobuhito Ohte* 326

Uncertainties of two, three and five component hydrograph separations in a mountainous catchment
*Simon Hoeg, Stefan Uhlenbrook* 333

Verification of flow processes in soils with combined sprinkling and dye tracer experiments
*Markus Weiler, Felix Naef* 345
The separation of flow pathways in a sandstone catchment of the northern Black Forest using a nested approach
Markus Casper, Erich J. Plate, Jens Mehlhorn, Holger Volkmann, Guido Waldenmeyer

Humic substances and agrochemicals in the discharge components of Scheyern
K.-P. Seiler, C. Hellmeier

Hydrograph separation of selected runoff events using DOC and 18O as natural tracers
Holger Volkmann, Markus Casper

Analysis of high resolution multi-frequency, multi-polarimetric and interferometric airborne SAR data for hydrologic model parameterization
Martin Herold, Volker Hochschild

Poster abstracts

Delineation of areas with homogeneous system response (HRUs) for parameterizing hydrologic relevant processes – a case study from Thuringia
Klaus Bongartz

Distributed hydrological model parameterization of large scale – afforested areas in the north-east cape province, South Africa
Jürg Helmschrot

J2000 – a new modelling system for distributed simulation of hydrological processes in large river basins
Peter Krause

Matrix and bypass-fluxes in quaternary and tertiary sediments of Scheyern
K.-P. Seiler, S. Schneider

Introducing topological information of hydrological response units for physically-based distributed catchment modelling
Helmut Staudenrausch

Infiltration study in a soil layer of a dry flood plain using artificial tracers
Paul König, Morten Karnuth, Lutz Jaeger, Christian Leibundgut

Mean values of runoff and evapotranspiration calculated for the Hydrological Atlas of Germany (HAD)
P. Jankiewicz, G. Glugla, C. Rachimow, K. Richter, G. Fürtig
Soil water repellency: a cause of temporal variations in response time to rainfall events at a range of scales from point to catchment in size?  

Design floods in small torrential catchments  
F. Forster, H. Kleindienst, St. Vogt, A. Badoux, Ch. Hegg  

A comparison of runoff components obtained by measurements of natural tracers and by recursive digital filtering of hydrographs  
Klaus Eckhardt, Stefan Uhlenbrook  

Forest die-back due to bark beetle infestation and its effects on water budget and runoff components in the Bavarian Forest National Park  
Lothar Zimmermann, Robert Schwarze
