PROCEEDINGS OF THE SECOND INTERNATIONAL WORKSHOP ON ROBOT MOTION AND CONTROL

RoMoCo'01

UNIVERSITY OF ZIELONA GÓRA
POZNAŃ UNIVERSITY OF TECHNOLOGY

OCTOBER 18-20, 2001 - BUKOWY DWOREK, POLAND
# TABLE OF CONTENTS

Human-centered robotics and haptic interactions  
*O. Khatib*  .......................................................... 11

## 1. Plenary

Mobile robots versus intelligent transport systems  
*A. Borkowski*  .......................................................... 13

## 2. Kinematics

Laser calibration and kinematical analysis and synthesis of robots. Selected problems  
*J. Fączek, Z. Buśko, A. Morecki*  .......................................................... 19

Verification of kinematics parameters of manipulating systems using contact-less measurement system, based on laser interferometry  
*W. Klimasara, Z. Pilat, T. Stasiak*  .......................................................... 27

On some methods to improve kinematic properties of parallel manipulators  
*K. Mianowski*  .......................................................... 31

On inverse kinematics of stationary and mobile manipulators  
*K. Tchoń*  .......................................................... 39

Performance analysis of multi-legged systems  
*M.F. Silva, J.A.T. Machado, A.M. Lopes*  .......................................................... 45

## 3. Robot Control I

Quasi optimal control for two-link arm with flexible joints  
*Y. Aoustin, A. Formal’sky*  .......................................................... 51

Homogeneous set point control for serial manipulators in terms of normalized quasi-velocities  
*P. Herman, K. Kozłowski*  .......................................................... 59

Fuzzy logic implementation in mobile robot control  
*S. Pawłowski, P. Dutkiewicz, K. Kozłowski, W. Wróblewski*  .......................................................... 65

A quantification of peak force in a switching controlled impact operation  
*J.K. Tar, I.J. Rudas, K. Kozłowski, T. Ilkei*  .......................................................... 71

## 4. Robotic Applications I

Behavior learning to predict using neural networks (NN): towards a fast, cooperative and adversarial robot team (RoboCup)  
*A. Chohra, P. Schöll, H.U. Kobialka, J. Hermes, A. Bredenfeld*  .......................................................... 79
Optimal neural network output feedback control for robot manipulators
M. Jungbeck, M.K. Madrid ................................................................. 85

Hand gesture recognition for man-machine interaction
T. Kapuścinski, M. Wysocki ................................................................. 91

Distributed control application for a robot manipulator
M. Ramírez, L.A. González, B. Ivankovic ........................................... 97

5. Multiagent Systems

Evolutionary algorithms for navigation of underwater vehicle
J. Balicki, Z. Kitowski ................................................................. 103

Mobile robot cooperation in simple environments
A. Borkowski, M. Gnatowski, J. Malec ........................................... 109

Multiagent behavioral control system for a group of mobile robots
D. Dobroczyński ................................................................. 115

A quasi-formal approach to structuring multi-robot system controllers
C. Zieliński ................................................................. 121

6. Manipulator Trajectory Planning

Motion planning and partial stabilization of infinite-dimensional systems
A. Zuyev ................................................................. 129

Real time collision free motion control in telerobotic systems
G. Lian, Q. Zhao, Z. Sun ................................................................. 135

Planning of an optimal collision-free trajectory subject to control constraints
G. Pająk, I. Pająk ................................................................. 141

Heuristics in time-optimal motions of robotic manipulators
P. Gawłowicz ................................................................. 147

7. Plenary

Telesurgery and robotics on Tomorrow's Surgery
W. Waliszewski ................................................................. 151

8. Robot Control II

A universal $\lambda$-tracking controller for mobile manipulators
A. Mazur ................................................................. 153

An algebraic approach to boundary stabilization for parabolic systems with Dirichlet boundaries
T. Nambu ................................................................. 161
Robust tracking with control vector constraints
*P. Dutkiewicz, M. Michalski, M. Michałek* .................................................. 169

Robot motions in a dynamic environment
*M. Galicki* ......................................................................................... 175

9. Mechatronic Design in Robotics

On electrical analogues of mechatronic systems
*E. Jezierski* ....................................................................................... 181

UML as integration tool for design of the mechatronic system
*Z. Mrozek* ....................................................................................... 189

Embedded controller design – mechatronic approach
*M. Petko, T. Uhl* ............................................................................... 195

10. Robot Control III

An adaptive control method of automated vehicles with integrated longitudinal and lateral dynamics in road following
*L. Beji, Y. Bestaoui* .......................................................................... 201

Robust, direct torque control of induction motor drives in application to industrial manipulator
*R. Beniak, P. Wach, P. Wosik* .......................................................... 207

Nonlinear control methods for disturbance rejection on a hydraulically driven flexible robot
*M. Bröcker, M. Lemmen* .................................................................. 213

Multi-robot coordination
*W. Kowalczyk* ................................................................................ 219

11. Walking Robots

Control system of walking robot
*T. Zielińska* .................................................................................... 225

Vision based obstacles recognition for the climbing robot “Safari”
*P. Dutkiewicz, M. Ławniczak* .......................................................... 231

Flip gait synthesis of a biped based on Poincare map
*T. Geng, X. Xu* ................................................................................ 239

Transfer of biological principles in the construction of quadruped walking machines
12. Robotic Recognition Systems

Multi-sonar system with differentiated directions of acoustic axes
B. Kreczmer, K. Stachera ......................................................... 251

The usage of hidden Markov models in a vision system of a mobile robot
B. Kwolek ............................................................................. 257

Lateral control of an aurial unmanned robot using visual servoing techniques

Laser and camera for road edge and mid-line detection
W.S. Wijesoma, K.R.S. Kodagoda, A.P. Balasuriya ........................................ 269

13. Plenary

Sensor fusion based on fuzzy Kalman filter
J.Z. Sąsiadek, J. Khe ............................................................... 275

14. Robotic Applications II

Fuzzy ArtMap neural network (FAMNN) based collision avoidance approach
for autonomous robotic systems (ARS)
O. Azouaoui, M. Ouaaz, K. Achour, A. Chohra, A. Farah ................................. 285

Computer controlled robot processing of shipbuilding profile system based on RPC
communication method
H. Wang, G. Ding, G. Yan, Y. Shun .................................................. 291

The section-steel deformation’s measure and compensation in the lining-cutting
robot system
Y. Wang, G. Ding, L. Lin .................................................................. 299

Hybrid force/position control for two cooperative Stäubli RX60 industrial robots
J. Bekalarek, R. Zawal, K. Kozłowski .................................................. 305

The psycho-sociological and organisational consequences of the introduction of robots.
The advisable organisational culture
J. Stankiewicz ............................................................................. 311

Author Index ............................................................................ 317
