Preface .............................................................................................................. xi  
WMEL Graduate Research Assistants ............................................................... xiii  
Wood Composites Hall of Fame ...................................................................... xv  
Hall of Fame Inductees 2001 ........................................................................... xvii

## Session I

**Durability of Wood-Based Composites**  
*Moderator, Robert J. Tichy*

- Flexural Properties of Structural Lumber Products After Long-Term Exposure to 150°F and 75% Relative Humidity  
  *David W. Green and James W. Evans* ......................................................... 3
- Biodeterioration of Wood-Based Composites and its Prevention  
  *Jeffrey J. Morrell* .......................................................................................... 17
- Long-Term Load Effects for Wood Composites  
  *Erol Karacabeyli* .......................................................................................... 25
- Lessons in Durability from the Building Envelope Research Consortium (BERC) Experience in British Columbia  
  *Don Hazleden* ............................................................................................ 31
- Advanced Hygrothermal Modeling of Building Materials Using MOISTURE-EXPERT 1.0  
  *Achilles N. Karagiozis* ................................................................................ 39
- Wood Based Panels with Improved Durability for Laminate Flooring Applications  
  *Laurence Mott* ........................................................................................... 49
- Green Blending to Improve Panel Durability  
  *Chris F. Edwardson* ................................................................................... 55
- Finite Element Modeling of Dimensional Stability in Layered Wood Composites  
  *Alain Cloutier* ............................................................................................ 63
Session II
Oriented Strandboard — What’s Next?
Moderator, Bernard Fuller

Opportunities Versus Expectations: World Market Prospects for OSB and MDF
Bernard Fuller ................................................................. 75

How Durable Is Structural Sheathing?
Stephen L. Quarles .......................................................... 85

High Capacity OSB Mill — The Ainsworth Experience
Michael Ainsworth ............................................................ paper not available at presstime

Controlling Thickness Swell in Oriented Strand Composites
Jeffrey D. Linville and Michael P. Wolcott ............................. 91

Operating Experiences — Producing OSB with Continuous Presses
Andreas Woestheinrich and Joachim Meier ........................... 103

OSB Developments in Europe
Harald Fried ........................................................................ 109

Session III
Ag-Fiber Products and Process Developments
Moderator, Chris Edwardson

Agrifiber Composite Panels: Environmentally Responsible Product Performance
Alan L. Boyd ........................................................................ 117

Ag-Fiber “Dot Gone” — A Litany of Failure
Donald E. Lengel .................................................................. 125

Agricultural Fiber Product Differentiation — Creating Value through Product Attributes
Richard Chunta ..................................................................... 133

Strawboards Bonded with Urea Formaldehyde Resins
George Mantanis and Jochem Berns ....................................... 137

Straw-Based Composite Panels — Attributes, Issues, and UF Bonding Technology
Wayne Wasylciw ................................................................. 145

Session IV
Managing Composite Panel Industry Waste
Moderator, Kurt Bigbee

MACT Rule Development Update — 2001
Kurt Bigbee ........................................................................ 157

Bio-filtration Techniques and Experience
Gary McGinnis .................................................................... paper not available at presstime

Formaldehyde Biological Removal from Exhaust Air in the Composite Panel Board Industry —
from Pilot Tests to Industrial Plant Operation
Massimo M. Ferranti ............................................................ 165
Technical Forum

Smart Solutions to Wrapping Problems in the Panel Industry
Jacques L. Cadieux ......................................................... 179

Characterization of Heat and Mass Transfer in the Mat During Hot-Pressing of MDF Panels
Rosilei A. Garcia and Alain Cloutier ..................................... 179

Axial Collapse of Oil Palm Frond Fiber/Epoxy Circular Cylindrical Composite Shell
El-sadig Mahdi Ahmed, B.B. Sahari, A.M.S. Hamouda, and Y.A. Khalid ................................................. 179

The Best of Both Worlds: Improved Board Properties and Lower VOC’s Using Hybrid Drying Technologies
Peter Zagorzycki .......................................................... 180

Forintek MDF Pilot Plant
André Moffet ............................................................. 180

Software Model of MDF Fiber Processing for Plant and Process Optimization
Shusheng Pang and Jeremy Warnes ..................................... 181

Finishing Line Challenges when Producing OSB with a Continuous Press
Michael Tart ............................................................... 181

Ceramicrete®-Bonded Building Materials Using Forest Waste
Donald W. Brown, Lauren K. Powell, Arun S. Wagh, and Seung-Young Jeong ................................................. 182

Statistical Methodology to Characterize Variability of Wood Composites
Alejandro M. Bozo and Michael P. Wolcott ................................ 182

Developing Strategies for MACT Compliance
Kevin D. Kaff ............................................................... 183

Modeling of the Core Temperature Gradient of MDF with Control Limits for Data Signatures
Timothy M. Young and Chris Huber ..................................... 183

On-Line Laser Measurement of OSB Strand Alignment
Siguo Chen ................................................................. 183

Pyrolysis Oil for OSB Wood Adhesives
Felisa D. Chan, B. Riedl, X-M. Wang, X. Lu, and C. Roy ................................................................. 184

GluScan Resin Distribution
Kevin Groves and Tim M. Worthen ..................................... 184

Computer Software Programs for Wood Composite Processing
Brad J. Wang and Chunping Dai ......................................... 184

USDOE — Office of Industrial Technologies (OIT): Win-Win Industry/Research Community Opportunities
John Ryan ................................................................. 185

Case Study of Progressive Marketing and Leading Technology for Tafisa and Plum Creek
Francesco Zenere and Frederick T. Kurpiel ................................ 185

Minimizing NOx and VOC Emissions Reductions from Energy Plants in the Board Industry
Tom Wechsler and Eric Dessecker ...................................... 185

Electrostatic Effect of Lining Materials in Blenders on Powder PF Resin Distribution on Strand Surfaces
Xiang-Ming Wang, Hui Wan, Daniel Lefèbvre, and Danny Giguère .......................................................... 186
Toward the Use of Melamine in Standard and Moisture-Resistant Adhesives: Economics and Additional Performances
Willem Cramer, Arne Jansen, and Kai Kruze ........................................ 186

Next Generation Hydro-Dyn® Press Fluid Technology
James Habermehl ................................................................. 187

PMDI as an Additive to UF- and MUF-Resins for Particleboard Production
Ted Frick and Bill Motter ...................................................... 187

Mechanical Characterization of the Curing Process of Adhesives During Hot-Pressing of Wood-Based Panels
Christian Heinemann and Arno Fruehwald .................................. 187

 Flake Preparation – Klöckner Wood Technology Products Reduce Machine Downtime and Increase Processing Efficiency
Bengt Nilsson ............................................................................. 188

Influence of Efficiency Improvement on Process Belts in the Board Industry
Markus Kraft and Bernd Roser .................................................. 188

GreCon Raw Density Profile Analyzer StenOgraph
Stephan Zimmermann ............................................................... 189

Improving Wood Flour Processing Efficiency
Jason Kessler ............................................................................. 189

New Generation Fast Cure Phenol-Formaldehyde Resins for Improved Dimensional Stability in Particleboards and OSB
Peter Collins ............................................................................. 189

Roll Screening for PB, MDF, and OSB
Michael McNeley ..................................................................... 190

Double Trough Blending Reduces Fiber Damage and Increases Resin Distribution Efficiency
Doug Moore ............................................................................... 190

Determination of Dynamic MOE of Particleboards Made Solely from Recycled Particles
Sumire Kawamoto, James Muehl, and R. Sam Williams .................. 190

Update...Low Temperature, Conveyorized Strand Drying, and Exhaust Abatement Technology
Jeffrey L. Dexter and Bill Nowack ............................................ 190

Production Parameters Affecting the Palmboard Quality
S.A. Kandeel and R.A. Abohassan .............................................. 191

New Particleboard and OSB Flake Technology
Robert Loth ................................................................................ 191

Appendix

Conversion Factors ...................................................................... 195

Symposium Cochairs and Session Moderators ..................................... 199

List of Papers, Authors, and Addresses ............................................ 201

Attendees and Addresses ................................................................ 203
