The Proceedings of the 27th International Technical Conference on Coal Utilization & Fuel Systems

Volume I of II

March 4 – 7, 2002
Sheraton Sand Key
Clearwater, Florida, USA
# TABLE OF CONTENTS

**VOLUME I (Pages 1 – 618)**

## Economic & Financial Perspectives
*Chairman: Donald P. Daley, Lurgi Lentjes, NA*

1. **Evaluating the Merits of Coal Projects in a Competitive Electric Market**
   Patricia A. Rawls, U.S. Department of Energy, National Energy Technology Laboratory; Richard E. Weinstein, P.E., Albert A. Herman, Jr., and James J. Lowe, Parsons Infrastructure & Technology Group Inc., USA

2. **Gasification: Opening Coal to New Markets**
   David Gray and Glen Tomlinson, Mitretek Systems, USA

3. **Economic Assessment of Life Cycle Analysis of Coal Production and Use Process**
   Jayanta Bhattacharya, PhD, Associate Professor, Department of Mining Engineering, Indian Institute of Technology, INDIA

## The Vision 21 Program I, II & III
*Chairmen: Dr. Lawrence A. Ruth, National Energy Technology Laboratory, U.S. Department of Energy and Fred Glaser, U.S. Department of Energy*

4. **Vision 21 Partial Gasification Module Pilot Plant Tests**
   A. Robertson, Foster Wheeler Development Corporation, USA

5. **Vision 21 - Systems Integration Methodology**
   Dr. A.D. Rao and Dr. G.S. Samuelsen, Advanced Power and Energy Programs, University of California; Dr. F.L. Robson, KraftWork Systems, Inc.; and Dr. W. H. Day, Pratt & Whitney Power Systems, USA
Novel Composite Membranes for Hydrogen Separation in Gasification Processes in Vision 21 Plants
Michael Schwartz, ITN Energy Systems, Inc., USA.............49

Near-Term Potential for Power Generation from Coal with Zero Atmospheric Emissions

A Computational Workbench Environment for Virtual Power Plant Simulation
Mike Bockelie, Martin Denison, Dave Swensen, Zumao Chen, Connie Senior and Adel Sarofim, Reaction Engineering International, USA.................................63

Advanced-Gasification Combustion: Bench-Scale System Design and Experimental Results
George Rizeq, Janice West, Raul Subia, Arnaldo Frydman, and Vladimir Zamansky, GE Energy and Environmental Research Corporation; and Kamalendu Das, U.S. Department of Energy, National Energy Technology Laboratory, USA.............75

Progress in Development of Direct FuelCell®/Turbine Systems
Hossein Ghezel-Ayagh and Joe Daly FuelCell Energy, Inc., USA..........................85

Software Integrations for Power Plant Simulations

Oxygen Transport Membranes for Application to Zero Emission Power Plants Using Solid Oxide Fuel Cells
G. Maxwell Christie, Ph.D. and Troy M. Raybold, Ph.D., Praxair, Inc.; and Larry A. Shockling, Ph.D., Keqin Huang, Ph.D., and Thomas E. Gilboy, Siemens Westinghouse Power Corporation, Stationary Fuel Cells, USA..........................99
Hydrogen Separation Membranes for Vision 21 Energy Plants

Mercury Control I & II
Chairman: Stanley J Vecci, McDermott Technology, Inc.

Study on Measuring Method of Mercury in Flue Gas and Its Application for Coal-fired Test Plant
Hirofumi Kikkawa and Takanori Nakamoto, Babcock-Hitachi Kure Research Laboratory, JAPAN.................................113

Where Did the Mercury Go? An Examination of the ICR with Respect to the Role of Surface Area
T. Thomas, The Ohio State University, USA.......................125

Full-scale Testing of Mercury Control for Wet FGD Systems
Dennis K. McDonald, Michael G. Milobowski, and Paul S. Nolan, Babcock & Wilcox; and Gerald T. Amrhein, Greg A. Kudlac, and Deborah Madden Yurchison, McDermott Technology, Inc, USA...........................................135

Utilization of Combustion Modifications to Control Mercury Emissions
Vitali Lissianski, Vladimir Zamansky, Peter Maly, and Randy Seeker, GE Energy and Environmental Research Corporation, USA..................................................137

Impact of Coal Chlorine and Flue Gas Temperature on Mercury Speciation

Pre-Combustion Removal of Mercury from Coal
F.D. Guffey, A.E. Bland, and T.H. Brown, Western Research Institute, USA................................................147
Pilot-Scale Research at NETL on Mercury Measurement and Control
William J. O'Dowd, Richard A. Hargis, and Henry W. Pennline, National Energy Technology Laboratory, U.S. Department of Energy, USA..........................................................159

Biomass Interest Group I & II
Chairman: Evan Hughes, Electric Power Research Institute

Firing Sawdust and Tire-Derived Fuel with Coal at Willow Island Generating Station
David Tillman, Foster Wheeler Energy Corporation; Kathleen Payette, Tim Banfield and Glenn Holt, Allegheny Energy Supply Co., USA.................................................................165

Emissions Management at Albright Generating Station through Biomass Cofiring
Kathleen Payette, Tim Banfield and Tom Nutter, Allegheny Energy Supply Co.; and David Tillman, Foster Wheeler Energy Corporation, USA.................................................................177

Biomass Cofiring: Results of Technology Progress from the Cooperative Agreement between EPRI and USDOE
David Tillman, Foster Wheeler Energy Corporation; Sean Plasynski, National Energy Technology Laboratory, U.S. Department of Energy; and Evan Hughes, Electric Power Research Institute, USA.................................................................187

Modeling Combustion and Pyrolysis of Wood Chips
Matthew Hagge, M.S. and Kenneth M. Bryden, Ph.D., Iowa State University, Department of Mechanical Engineering, USA.................................................................203

The Environmental Benefits of Cofiring Biomass and Coal
Margaret K. Mann and Pamela L. Spath, National Renewable Energy Laboratory, USA.................................................................205
Biomass Combustion and Cofiring Issues Overview: Alkali Deposits, Flyash, NO\textsubscript{x}/SCR Impacts  
Larry Baxter, Dale Tree, Fernando Fonseca and Warren Lucas, Brigham Young University, USA.................................217

Cofiring Mixtures of Urban Wood and Coal to Stoker Boilers  
James T. Cobb, William W. Elder and Hongming Li, Chemical and Petroleum Engineering Department, University of Pittsburgh, USA.........................................................227

Biomass Cofiring, Other Biomass Energy Topics, and Results From the EPRI Biomass Interest Group  
Evan Hughes, Electric Power Research Institute, USA......233

Advanced Materials  
Chairman: Fred Glaser, U.S. Department of Energy

A Rugged, Reliable Check Valve for Extremely Harsh Environments  
Todd R. Snyder, Southern Research Institute, USA..........235

Gas Separations Based on Electrical Swing Adsorption  
Roddie R. Judkins and Timothy D. Burchell, Oak Ridge National Laboratory, USA.................................247

Materials for Ultrasupercritical Coal-Fired Power Plants  
R. Viswanathan, Strategic Science and Technology, Electric Power Research Institute; R. W. Swindeman, and I. G. Wright, Oak Ridge National Laboratory; and R. Purgert, Energy Industries of Ohio, USA.................................................257
Recent Experiences with Utility SCR's
Chairman: Michael J. Rini, Alstom Power

Economic and Environmental Analysis of IGCC Power Generation with SCR Technology for Further NOx Reduction
David Gray and Glen Tomlinson, Mitretek Systems; Massood Ramezan, Science Applications International Corporation; and Gary Stiegel, U.S. Department of Energy, National Energy Technology Laboratory, USA..............................273

Second Generation SCR's
Edward V. Bowes, Dominion; and Michael J. Rini, Alstom Power, USA..................................................277

Leveraging Physical Flow Modelling and CFD to Optimize SCR Designs
David Anderson, Alstom Power Plant Labs, USA.........279

Fluidized Bed Combustion
Chairman: Donald Bonk, National Energy Technology Laboratory

Prediction of Deposit Formation in Biomass (Co-) Fired FBC Using an Advanced Characterisation Method
Maria Zevenhoven, Patrik Yrjas, Rainer Backman, Bengt-Johan Skrifvars, and Mikko Hupa, Åbo Akademi University, Process Chemistry Group, FINLAND..................281

Aspects of Co-Firing Natural Gas in Fluidized Bed Combustion
Dennis Y. Lu, and Edward J. Anthony, CANMET Energy Technology Centre, Natural Resources Canada, CANADA..................................................293
Co-combustion of Lignite and Municipal Solid Waste in a Fluidized Bed: Emission of Nitrogenous Species
K. Suksankraisorn, S. Patumsawad, P. Vallikul, and B. Fungtammasan, Waste Incineration Research Center (WIRC), Department of Mechanical Engineering, King Mongkut’s Institute of Technology North Bangkok, THAILAND; and A. Accary, Laboratoire Gestion Des Risques et Environnement (GRE), Universite de Haute Alsace, FRANCE

Effect of Mineral Matter on Coal Combustion Reactivity
Andrés F. Rojas and Juan M. Barraza, School of Chemical Engineering; and Magdalena Urhán, and Arlex Chavez, Escuela de Recursos Naturales y Medio Ambiente, University of Valle, COLOMBIA

Gasification Technologies
Chairman: Al Moussa, Blazetech Corporation

Opportunities for ORIMULSION® Gasification via IGCC Technology
Franzo Marruffo, PhD, Wladimir Sarmiento, Alejandro Alcalá, Quality and Technology Department, PDVSA-BITOR, VENEZUELA

The Impact of ITM Oxygen on Economics for Coal-Based IGCC
VanEric E. Stein, Air Products and Chemicals, Inc.; Edhi Juwono, Texaco Power and Gasification; and Elia P. Demetri, Concepts NREC, USA

Thermal Destruction of Plastic Materials in Solid Wastes
Daisuke Jinno, Ashwani K. Gupta, The Combustion Laboratory, Department of Mechanical Engineering, University of Maryland, USA; and Kunio Yoshikawa, Department of Environmental Science and Technology, Interdisciplinary Graduate School of Science and Engineering, Tokyo Institute of Technology, JAPAN
Low NOx Combustion I & II
Chairman: Alan Paschedag, Burns & Roe Enterprises

NOx Reduction of a 165 MW Wall-Fired Boiler Utilizing Air and Fuel Flow Measurement and Control
Marion Cherry, Santee Cooper, Dave Earley, Air Monitor Corporation/Combustion Technologies Corporation, David Silzle, Air Monitor Corporation, USA..........................365

Optimization and NOx Reduction Using On-Line Pulverized Coal and Airflow Measurement and Control
J. J. Letcavits, AEP – Pro Serv, Inc., USA.........................383

Development of an Ultra-Low NOx Integrated System for Pulverized Coal Fired Power Plants

Summary of Recent NOx Achievements with Low NOx Firing Systems and Highly Reactive PRB and Lignite Coal: as low as 0.11 Lb NOx/mmBtu
Robert Lewis, Gary Camody, and Patrick Jennings, ALSTOM Power, Performance Projects, USA..........................397

Operational and Performance Update on New Ultra Low NOx Combustion Systems with Fuel/Air Monitoring and Control Technology
John Grusha, Stefan Laux and Scott Slingerland, Foster Wheeler Power Group, USA.................................399

Development of an Effective 1:N Splitter For use in Multi-Phase Transport Systems
Joel Vatsky, Advanced Burner Technologies Corporation, USA.......................................................411
Ability of Models to Predict NO\textsubscript{x} Formation in Coal Fired Boilers
Anthony Williams, PhD Student, University of Queensland; John H. Pohl, Consultant Combustion and Pollution Control, Ultra-Systems Technology Pty Ltd.; and Steve Visona, Deceased, AUSTRALIA

Low NO\textsubscript{x} Results: Large & Small
Joel Vatsky, Tarkel Larson, and Charles Onaitis, Advanced Burner Technologies Corporation, USA

Update on Combustion Modification NO\textsubscript{x} Control for Coal-Fired Utility Boilers
Doug Gauld, Chris Latham, Todd Melick, Roy Payne and Todd Sommer, GE Energy and Environmental Research Corporation, USA

Opportunity Fuels I & II
Chairmen: David Tillman, Foster Wheeler Corporation, and Dr. Ashwani Gupta, University of Maryland

Utility Perspectives on Opportunity Fuels
Kirby Letheby, Alicant Energy, USA

Low Solids Coal Water Slurry Cofiring for NO\textsubscript{x} Trim
Joseph J. Battista, Cofiring Alternatives (EPRI/UCIG), USA

The Propensity of Liquid Phases Forming During Coal-Opportunity Fuel (Biomass) Cofiring as a Function of Ash Chemistry and Temperature
Sharon Falcone Miller and Bruce G. Miller, The Energy Institute, The Pennsylvania State University, Coal Utilization Lab; and David Tillman, Foster Wheeler Corporation, USA

Co-Firing Tire-Derived Fuel with Coal
N. Stanley Harding, N.S. Harding & Associates, USA
Petroleum Coke as a Supplementary Fuel for Cyclone Boilers:
Characteristics and Test Results
David Tillman, Foster Wheeler Corporation, USA.............489

Ashes to Energy: The Coleman Station Project
Jack Groppo and Tom Robl, University of Kentucky, Center for
Applied Energy Research, USA......................................503

Cofiring Wood Residue and Sunflower Hulls with Coal
Bruce C. Folkedahl and Christopher J. Zygarlicke, Energy &
Environmental Research Center, University of North Dakota,
USA.................................................................515

Effect of Wood Fuel on SO₂ Emissions in Co-firing with Peat and Coal
in Fluidized Bed Boiler
Markku M. Orjala, Veli-Pekka Heiskanen, Riikka M. Ingalsuo
and Jouni P. Hämäläinen, VTT Energy, FINLAND...........527

Computer Simulations
Chairman: Dr. Kenneth M. Bryden, Iowa State University

Computational Model for Efficient Filter Design
F. Hrdlicka, O. Kubelka, and P. Slavik, Czech Technical
University, Dept. of Fluid Dynamics and Power Engineering
and Department of Computer Science and Engineering,
CZECH REPUBLIC..............................................539

Modeling of Mercury States in Coal-Fired Utility Boilers
Z. Chen, C. L. Senior, and A. F. Sarofim, Reaction Engineering
International, USA..................................................549

Evaluation of Biomass Co-firing Injection Strategies Using CFD
Simulations: Pilot- and Full-scale Results
Kevin Davis, Hong-Shig Shim, David Lignell, and Martin
Denison, Reaction Engineering International; and Larry Felix,
Southern Research Institute, USA.................................561

xii
A Generic Simulation Method for the Lower and Upper Furnace of Coal-Fired Utility Boilers Using both Air Firing and Oxy-Fuel Combustion with CO₂ Recirculation
Ligang Zheng, Bruce Clements and Allan Runstedtler,
CANMET Energy Technology Center, Natural Resources Canada, CANADA..........................571

VR-XPR: A Toolkit for Rapid Development of Virtual Energy Systems
Kenneth M. Bryden, Ph.D., Gengxun Huang, M.S., Peter Johnson, M.S., Department of Mechanical Engineering, Iowa State University; and Edmundo Vasquez, Ph.D., Research and Development, Alliant Energy Corporation, USA..............581

Coal Compatible Fuel Cells I & II
Chairman: Hans J. Ziock, Los Alamos National Laboratory

Coal Compatible Fuel Cells; A User’s Wish List
Klaus. S. Lackner, Department of Earth & Environmental Engineering, Columbia University, USA...............583

Adapting Solid Oxide Fuel Cells for Coal Derived Fuels
Robert J. Remick, Associate Director, High Temperature Fuel Cell Technology, Gas Technology Institute, USA.............585

A Coal Fuelled Solid Oxide Fuel Cell System
Vik Arild, Lygrø Asle, Ce M., J. Byrknæs and P. Bratlund, Prototech AS, NORWAY.................................595

Anode Materials For Coal Gas Fuel Cells
Fernando Garzon, Eric Brosha and R. Mukundan, Los Alamos National Laboratory, USA............................607
Solid Oxide Fuel Cells
S. C. Singhal, Battelle Fellow and Director, Fuel Cells, Pacific Northwest National Laboratory, USA

The Opportunity for Coal-based Solid Oxide Fuel Cell Powerplants
Craig P. Jacobson, Steven J. Visco, and Lutgard C. De Jonghe, Materials Sciences Division, Lawrence Berkeley National Laboratory, USA

Using Advanced Solid Oxide Fuel Cells in Zero Emission Coal Systems
Romesh Kumar and Michael Krumpelt, Electrochemical Technology Program, Chemical Technology Division, Argonne National Laboratory, USA

VOLUME II (Pages 619 – 1,187)

Coal Preparation I & II
Chair: Lisa Corathers, National Mining Association

Integrated Carbon Recovery Systems for Fine Coal Processing Waste
Y.P. Chugh, A. Patwardhan and D.P. Patil, Southern Illinois University; R Q. Honaker, B. K. Parekh, D. Tao and Z. Chen, University of Kentucky; and L. Khan, Illinois State Geological Survey, USA

The Significance of Illinois Coal and the Illinois State Geological Survey (ISGS) Washer
Latif Khan and William R. Roy, Illinois State Geological Survey; and Ken K. Ho, Illinois Clean Coal Institute, USA

Coal Drying Improves Performance and Reduces Emissions
Charles Bullinger and Mark Ness, Great River Energy; and Nenad Sarunac and Edward K. Levy, Energy Research Center, Lehigh University, USA
