Nic Symposium 2001

edited by
Horst Rollnik
Dietrich Wolf

Symposium, 5. - 6. December 2001
Forschungszentrum Jülich
Proceedings

organized by
John von Neumann Institute for Computing

NIC Series Volume 9

ISBN 3-00-009055-X
Contents

Activities of the NIC Research Groups

Advanced Sequential Monte Carlo Methods in Physics
P. Grassberger 1

Research of a Research Group: The Case of the Elementary Particle Physics Group at NIC
K. Jansen 13

Astrophysics
Introduction by P. L. Biermann 25

Chemodynamical Evolution of Dwarf Irregular Galaxies
G. Hensler, A. Rieschick 27

Supernova Explosions of Massive Stars

Double Black Holes in Galactic Nuclei – Do they Merge or not?
M. Hemsendorf, R. Spurzem, S. Sigurdsson 51

Chemistry
Introduction by S. Peyerimhoff 61

Binding Properties in Protein Nucleic Acids
B. Dietrich, T. A. Hupp, B. Engels 63

Molecules as Mechanical Machines. Genetic Algorithms in the Search of Appropriate Descriptions of Molecular Catalysts
G. Huttner, J. Friedrich, A. Frick, V. Schulz, J. Karas, J. Hunger, St. Beyreuther 73

Efficient Calculation of Rovibrational Energy Levels of General Tetratomic Molecules
M. Mladenović 85

Computersimulation of Free Liquid Surfaces
J. Oberbrodhage, H. Morgner 95

Transition Metal Centers in Biological Matrices: Structure and Function of Vanadate in Vanadium Haloperoxidases and as Phosphate Analog
W. Plass 103
Metallic Glasses and Glass Forming Melts under External Forces or Reduced Dimension: Molecular Dynamics Simulations
K. Brinkmann, K.-B. Küchemann, H. Teichler 233

Condensed Matter
Introduction by K. Binder and H. Müller-Krumbhaar 243

Numerical Investigations of the Glass Transition and Glassy State of Structural Glasses and Spin Glasses
K. Binder, J. Horbach, W. Kob 247

Exact Diagonalization Results for Strongly Correlated Electron-Phonon Systems
H. Fehske, A. Weije, G. Wellein 259

Zener Breakdown in Superlattices
St. Glutsch 271

A Bosonic Model for High-Temperature Superconductivity and Antiferromagnetism: Numerical Simulation Studies

Magnetism and Structure on Atomic Scale
W. Hergert, V. S. Stepanyuk 291

Multi-Overlap Simulations of Spin Glasses
W. Janke, B. A. Berg, A. Billoire 301

Many-Body Correlation Effects in Photoexcited Semiconductor Heterostructures
T. Meier, Ch. Sieh, St. Weiser, M. Reichelt, Ch. Schlichenmaier, S. Siggelkow, P. Thomas, St. W. Koch 315

Computer Simulation of Chiral Liquid Crystal Phases
R. Memmer 325

Simulations of Liquid Crystals: Bulk Structure and Interfacial Properties

Metal-Insulator Transitions and Realistic Modelling of Correlated Electron Systems
N. Blümer, K. Held, G. Keller, D. Vollhardt 347
Polymers
Introduction by K. Kremer

Phase Transitions in Macromolecular Systems: Monte Carlo and Molecular Dynamics Simulations of Coarse Grained Models
K. Binder, J. Baschnagel, M. Müller, W. Paul

Critical Phenomena and “Crossover Scaling” in Model Systems for Soft Condensed Matter
K. Binder, J. Houdayer, E. Luijten, M. Müller

Computer Modeling of Charged Polymers
Ch. Holm, K. Kremer, M. Deserno, H. J. Limbach

Polyelectrolyte Brushes: A Molecular Dynamics Study
Ch. Seidel

Dissipative Particle Dynamics Simulations of Planar Amphiphilic Bilayers
J. C. Shillcock, R. Lipowsky

Fluid Dynamics

Massively Parallel Direct Numerical Simulation of Turbulent Combustion
M. Lange, J. Warnatz

Environment
Introduction by C. Simmer

Broadening of Convective Cells During Cold Air Outbreaks: A Numerical Study Using a Parallelized Large-Eddy Simulation Model
S. Raasch, M. Schröter

Sensitivity Studies with Numerical Models of Medium Resolution of the Atlantic Ocean
J.-O. Beismann, R. Redler

Modelling of Atmospheric Chemistry-Transport Processes
R. Wolke, O. Knoth, E. Renner, W. Schröder, J. Weickert

Nuclear and Atomic Physics
Introduction by P. Grassberger

Few-Baryon Systems
W. Glöckle, H. Witała, J. Golak, H. Kamada, A. Nogga
Computer Science and Numerical Mathematics

Introduction by M. Griebel

Hash Based Adaptive Parallel Multilevel Methods with Space-Filling Curves
M. Griebel, G. Zumbusch

High Performance FEM Simulation via FEAST and Application to Parallel CFD via FEATFLOW
Ch. Becker, S. H. M. Buijsen, S. Kilian, St. Turek

P. Bastian, K. Johannsen, St. Lang, S. Nägele, Ch. Wieners, V. Reichenberger, G. Wittum, Ch. Wrobel
