Contents

Invited Speech

New technologies to Create New Opportunities for the Railways and Society of the 21st Century ................................................................. 1
Shuichiro Yamanouchi, Chairman, East Japan Railway Company

Keynote Speech

Current Research Trends in the European Rail Sector ................................. 7
Phillipe Roumeguère, Chief Executive, Union Internationale des Chemins de fer

INFORMATION & COMMUNICATION: The New Frontiers in North American Railway Technology ................................................................. 17
Roy A. Allen, President, Transportation Technology Center, Inc.

A: Customer Service

Oral Sessions

AO1: Operation Management ........................................................................ 25
SAGACE™ A Systemic Modelling Method to Analyse and to Improve the Main Processes of a Railway Company : Application to a Parisian Suburb Line

Innovative Slot Management Systems for Guided Traffic

A Simulation Study on the Energy Saving Strategy of Train Operation

Optimising Operation Management with a Multi-Agent Approach - using TCS as an example

Life Cycle Costing and Operational Availability

AO2: System Capacity .................................................................................. 30
A Dedicated European Railway Network for Freight

Capacity Analysis, a Missing Link in Planning Infrastructure

AO3: Ticketing ............................................................................................. 32
Contactless Smart Card AFC Trials in East Japan Railway Co.

A New Approach for a More Efficient Operations Management in Suburban Areas
The Development of the Automatic Gate Machine for the Tokaido Shinkansen

Development of the Automatic Ticket Gate System Processing Two Tickets at Once

**AO4: Freight Transshipment**

Innovative Horizontal Transhipment Techniques

Increasing the Effectiveness of Ship to Train Transfers in Container Terminals: A Way to Sustain Intermodality

Mega Hub for Intermodal Traffic - the Planning of the Most Advanced Container Terminal in the World

Modern Methods of Freight-Train-Operation to Reach an Efficient and Economic Transport of Single Wagons and Small Groups

**Specialist Sessions**

**AS1: Passenger Comfort**

Use of the S.E.A. to Calculate and Optimize the Noise in the Driver's Cab of a Locomotive

Effects of Vibrational Factors on the Riding Comfort Evaluation of Tilting Train Passing Curve Transitions

Development of the Series 700 Shinkansen Train-set (Improvement of Riding Comfort and Cabin Environment)

Modernisation of Techniques for Assessment of Speed Potential and Riding Comfort of New Vehicles - Indian Railways Experience

Assessment of the Acoustical Comfort in Trains at SNCF: a Social Survey within Coaches

**AS2: Challenging Conventional Thinking**

Measuring the Environmental Impacts of High Speed Rail and Maglev in North America: What Railway Designers Need to Know

A Study on Dynamic Response of Guideway Structures on Yamanashi Maglev Test Line

Railways: Future Threats to Their Environmental Advantage

Efficient Passenger Trains for the Future

A New PM LSM Controlled-Repulsive Maglev Vehicle

Concept of Commuter Train for Saving Energy and Costs
AS3: Comfort in Stations ......................................................... 52
Modeling Pedestrians in Transfer Stations
Research of an Efficient Air-Conditioning System in a Station Concourses
Numerical Simulation for Bioclimatic Comfort

Poster Sessions

AP1: Urban Transportation ..................................................... 55
Modelling Generalised Rail Commuter Costs for use in Urban Transport Planning
Standardization of Urban Rapid Rail Vehicles in Korea
Consideration on Common Use of Smart Card Ticket among Operators

AP2: Operation Management .................................................. 58
Quality as a Business Philosophy for Less Efficient Networks
A Study on Reliability Allocation for Rolling Stock System
An Automatic Station Shunting Scheduling System: S4 - A Challenge to Intractable Combinatorial Problems –
Possible Benefits from Technological Foresight Studies on Non Railway Transportation Modes
Probabilistic Risk Assessment for Track Invasion and Breakdown Events in Railway Lines

B: Train Control

Oral Sessions

BO1: Intelligent Transportation Systems .................................. 65
Technologies for Flexible Passenger Transport Modes – A Railway's Contribution –
Integrated Control Room: A New Concept of the Italian Railways towards Year 2000
Train Control and ITS
AXONIS™ Alstom Latest Proven Technologies Dedicated to a Complete Driverless System
BO2: Safety Technology
The Safety and Electromagnetic Compatibility Implications of the Introduction of Transmission Based Train Control
Uncertainty Analysis in Railway Probabilistic Safety Assessment
MACSI: A Methodological Approach to Control Sub-Systems Integration in an Intelligent Transportation System
Creation of A Capital of Knowledge in the Field of Railway Safety

BO3: Man-Machine Interface
Presentation of a Range of Driving Desks for Locomotives
The Stress System in Train Drivers
Improving Safety Performance for Driver-less Operation Using FMCW Radar
Study of the Fatigue Induced on Train Drivers by Long Driving Periods

BO4: Tracking
Automatic Train Position Detecting and Reporting System
The FIRE Project
Satellite-based Location and Telecommunication for Railway Applications
Automatic Supervision of Wagons at Yugoslav Railways - Pilot Plant Project at Belgrade Railway Junction

BO5: Level Crossing
Automatic Electronic Detector of Obstacles over the Level Crossing Area
Level Crossings - Comparison between Europe, USA and Japan
Application of Computers in Estimation of the Traffic Degree of Safety at Level Crossings
Level Crossing Safety Improvement

Poster Sessions
BP1: Intelligent Transportation Systems
The Development and Application of Transient Detect-Recording System on Locomotives
System for Grasping Train Operating Status at the Site

Enhancement of the Occupancy of Railroads Using "Virtually Coupled Train Formations"

Interactive Simulation Program for Train Scheduling Using Advanced Expert System

Evaluating MRT Mixed-Fleet Operation by OOP Simulation Models

**BP2: Safety Technology** ................................................................. 90

Simulation models for the Fire Safety of the Lyon-Torino Basis Tunnel

Realizing Benefits Through the Integration of ATCS with Railroad Management

Information Systems: Key Challenges for Application

Deterioration Prediction of Electronic Equipment

Automation in Rail Traffic: Automated Train Control - Options and Obstacles

Cost-Effective Train Radio Communication on Indian Railways

**BP3: Safety Critical Software** .................................................. 95

Hierarchical Railway Signaling Fault Diagnosis System Based on Neural Network and

Expert System

Safety Critical Software of Météor Developed with the B Formal Method and the Vital

Coded Processor

A Study on Computer Simulation Methods for Railway Transportation Safety

Safety Technologies for Computerised Signalling Systems and Relevant Safety

Management Activities in Japan

Fault Tolerant Train Navigation System Using Multisensor Integration Methods

**C: Vehicles (Freight and Passenger)**

**Oral Sessions**

**CO1: Bogies & Running Gear** .................................................. 103

High Speed Bogie - Mutual Development JR East – DBAG

The Mechatronic Train: Requirements and Concepts

Global Active Suspension System for Railway Coaches
The Potential for Heavier Payload on Existing Track by using "Track-Friendly" Rail Vehicle Suspension Designs

CO2: Train Monitoring
---------------------------------- 107
Managing the Vehicle-Infrastructure Interface in a Privatised Railway Environment
Development of Automatic Solid Axle Flaw Detection Line for Narrow-Gauge Line Cars
An Image Processing Based System for Wheel and Flange Profile Measurement
Development of Commuter Train Adopting Information Technology
ECP for Heavy Freight Service: Train Control and Monitoring for the 21st Century

CO3: Tilting
---------------------------------- 112
Adaptation of Norwegian Tracks to Tilting Trains - Specific Aspects of High Speed Curving
A Study of the Track Maintenance and Change of Track Condition after Tilting Car Introduction in Sikoku Railway Company
Research on Motion Sickness
Influence from Lateral Acceleration and Roll Motion on Nausea: A Simulator Study on Possible Causes of Nausea in Tilting Trains

CO4: Maglev
---------------------------------- 116
Repulsive Magnetic Levitation System with Permanent Magnets
Superspeed Maglev Vehicle Transrapid 08 Qualification and Type Certification
Characteristics of Train Control and Power Supply Systems at Yamanashi Maglev Test Line
Results of Running Tests of the MLX01 Yamanashi Maglev Test Line Vehicles

Specialist Sessions

CS1: Vehicle Safety
---------------------------------- 121
Evaluating New Technologies for Railway Tank Car Safety through Cooperative Research
Development of a Crash Optimized Solebar for Driver's Cab Underframe of Railway Vehicles
Carbodies for High Structural Integrity and Safety
Investigation about Crashworthy Composite Materials Suitable for Transport Vehicles
Application of Numerical Simulation to Passenger Safety

**CS2: Brake Control** ................................................................. 126

Appropriate Brake Control Based on Adhesion Characteristics
Numerical Heat Transfer and Fluid Flow of Wheel and Tread Brake Shoe
Dry Friction-Induced Oscillations of Railway Disk Brakes and Wheels

**Poster Sessions**

**CP1: Train Monitoring** ............................................................. 129

Development of the Computerized System for the Realization of Concurrent Engineering at Design and Manufacturing Process of Rolling Stock
Development of a Methodology and Facility for Non-dismantling Inspection of AC Traction Motors
From X2000 to Crusaris Regina: Development of LCC Technology
Development of Gauge-Changing EMU
Virtual Assessment of Railway System and Components

**CP2: Freight** ............................................................................. 134

Internet-Based International Rail Freight Monitoring - The RailTrace System
Study on Freight Transportation by Train Ferry between Korea and China
Passive Refrigeration for Transportation and Storage of Fresh Perishable
A Logistic Centre in the Transcontinental Transport System Europe-Asia
The Cargo Transport Market in the Eurasian Transport Corridors

**CP3: Traction Drives** ................................................................. 139

The High Efficiency IM Drive by GTO CSI with Regenerative Commutation and Snubber Energy
Technological Development of the Series 700 Shinkansen High-Speed Train
Technological Development of an IGBT Applied Traction System for the Series 700 High-Speed Train

Development of Multiple Unit Operation Control for Train Set of DMU and EMU

PWM Converter Control Stability as Variable Impedance for Linear Generator

Double Current Band Control for N.P.C. Inverter

Simulation of Chopper Controlled DC Series Traction Machine in Motoring and Braking Mode for Tehran Metro Application

Series EH500 Induction Motor Drive Locomotive for Dual Power Lines with IGBT Converters

\textbf{D: Infrastructure}

\textit{Oral Sessions}

\textbf{DO1: Maintenance Management of Track} \hspace{1cm} 149

Improved Performance of Infrastructure by Benchmarking the Infrastructure Costs

Simulation Can Help Decision Making in Rail Maintenance

Simulation of Rail Maintenance Management for Reducing Overall Life Cycle Cost

Modeling the Transition Process of Railway Track Irregularity and Its Application to Decision Making for Maintenance Strategy

\textbf{DO2: Track Monitoring} \hspace{1cm} 153

Laboratory and Full-Scale Prototype Evaluation of Ground Penetrating Radar on Railway Trackbed Ballast

Use of Axle Box Acceleration to Detect Track and Rail Irregularities

The System for Monitoring Condition of Rail Fastening and Better Performance for the High-speed Confirming Vehicle

Track Stiffness: a Tool for Maintenance?

\textbf{DO3: Ballast Track} \hspace{1cm} 157

Evaluating Track Structures: Life Cycle Cost Analysis as a Structured Approach

The "Frame-Sleeper-Track" An Innovative Ballasted Railway Track

Influence of Bridge Dynamics on Ballast Deterioration on High Speed Lines
Reduced Life-Cycle Cost by Potential Changes in Track Technology - Track Structure with Matching Renewal Cycle of Rails and Fastenings with Concrete Sleepers

Durability Tests of Ladder Sleepers under Heavy Axle Loads at TTCI

**DO4: Wheel/Rail Interaction** ................................................................. 162

The Application of Proven Wheel/Rail Technology to Minimise Wheel and Rail Wear and Maintenance Costs on the New Airport Railway in Hong Kong

A Successful Approach to Rail Operations in Low Adhesion Conditions

Experimental Investigation on Wheel-Rail Contact by Means of Ultrasonic Waves

Dynamic Responses of Railway Track to Rail Corrugation Excitations by Using Finite and Infinite Elements Model

**Specialist Sessions**

**DS1: Track Life Cycle Cost** ................................................................. 167

Low Life Cycle Cost on Total Rail System Level: System Optimization with DOCplus

Reduction of the Costs of the Construction of High Speed Lines

Infrastructure for New High Speed Lines. Transition Structures Optimization of Design and Calculation

Economizing Maintenance Costs by Enhancing the Management of Welded Joints

TC type Low-maintenance Track for Existing Lines

**DS2: Catenary** ...................................................................................... 172

Preparation and Characterization of Composite Materials for Strips of Pantographs by Different Metallurgical Methods

Development of Measuring Apparatus for Contact Wire Wear Using Sodium Vapour Lamps

Development of High Speed Simple Catenary for Projected Shinkansen

Optimization of New D.C. Catenary by Means of Measurements and Simulation of Pantograph-Catenary Interaction

Investigation of Stress of Contact Wire Clamped with Steady Arm on a Constant Uplift Force Passing by

Novel Contact Material with Improved Wear Performance for Railway Power Collection
DS3: Rail Monitoring

Improvement of CWR Maintenance with New Measuring Technique Utilizing Barkhausen Noise
A New Detecting Method for Rail Corrugation by Using Wavelet Analysis
The Non-Destructive Measurement of Stress-Free Temperature in Continuous Welded Rail
JR Kyushu's Countermeasures for Corrugation

DS4: Slab Track

The Development of Ballastless Track for the High Speed Line South in the Netherlands
Comparison of Two Types of Slab Track - Considering Dynamics
Slab Track for the Extension of the Madrid Metro

Poster Sessions

DP1: Tunnels

A Study on Seismic Behavior of Shield Tunnels in Longitudinal Direction
Development of New Grouting Method for Aged Tunnels and its Application
Experimental Study of the Aerodynamic Countermeasures for Reducing the Micro-Pressure Waves and Pressure Fluctuations in High-Speed Train-Tunnel Interfaces
Maintenance and Management of Undersea Tunnel
Pressure Waves Effects of High Speed Trains Running Parallel on Large and Medium Sized Tunnels of Italian High Speed Lines
Infrasound Problems Occurring Near Tunnel Portals of High-speed Railway
Tunnel Inspection System for Railways Using Continuously Scanned Image System

DP2: Wheel/Rail Interaction

The Wheel as Sensor of Interaction between Wheel and Rail
Revive of Lubrication between Rail & Wheel in Iranian Railway
The Effects of Low Noise Wheels on the Noise and Vibration of Subway Vehicles
Development of Wheel Tread Nicknamed "CS Tread" for Narrow Gauge Lines
Evaluation of a Derailment Detection Algorithm by a Running Simulation of the Vehicle on a Main Line

**DP3: Bridges** ................................................................. 197

Vehicle/Bridge Dynamic Interaction Analysis for Ultrahigh Speed Rail

Floating Ladder Track and New Viaduct Structures to Provide Low-Vibration and Superior Running Safety during Earthquake

The Monitoring of Bridges for Scour. The Experience of the Italian State Railways (F.S.)

Securing SHINKANSEN Operation against Growing Demand for Development of Cross Structure

Construction of Pier Using Preloaded and Prestressed Geosynthetic-Reinforced Soil Structure Method

Development of Incremental Launching Method for Extradosed Bridge

**DP4: Stations & Structures** .................................................. 203

On Construction of New Shinagawa Station of Tokaido Shinkansen

Landscape Design of Railway Viaduct

A Mobile Terminal for Information and Control

The MASK Demonstrator: An Emerging Technology for User-Friendly Passengers Kiosk

**DP5: Track Monitoring** ....................................................... 207

Practical Use of TRASC on Track State Confirming Cars

Running Stability of Two-Wheelset Inspection Vehicle for Shinkansen

Using Automobile to High-Speed Confirming Vehicle for Shinkansen's Safety

The Development of the Guiding Method for Tamping Machine's Lining Work Under the High Speed Operation at Shinkansen Line & Ordinary Line

Automatic Measuring of Rail Gaps

TIMON

Automatic Control of Tamping Tools of SMTT

SOFI: Virtual System for Track Operation Training
DP6: Infrastructure ........................................ 215

Economical Analysis of the Influence of Mixed Traffic on High Speed Lines

Simulation Models for Establishing the Railway Infrastructure Capacity

Study on the Mitigation of Slope Disaster along Railways with Remote Sensing Data

Project for Restoring a Railway Embankment with Expanded Polystyrene (EPS)

Deformation Properties of Railroad Ballasts Subjected to Monotonic and Cyclic Loadings

Optical Inspection of Rolling Stock and Infrastructure

Modeling of Technical Features of the Total Rail System

E: Environment

Oral Sessions

EO1: Cross Wind ............................................. 225

TRANSAERO: Results of an European Research Project in Railway Aerodynamics

Wind Tunnel Tests on Aerodynamic Characteristics of Vehicles under Cross-winds

Analysis of the Relationship between the Nose Shape of High Speed Train and the Pressure Distribution against Wayside Equipment

Regulation of Train Operation Based on Natural Wind Direction and Velocity under Strong Winds

EO2: Vehicle Noise ......................................... 229

Adtranz Advanced Technology Development Project for Noise and Vibration

Development of the Series 700 Shinkansen Train-Set (Improvement of Noise Level)

High Speed Trains with Bogie Fairings: European Research into Reducing Aerodynamic Drag and Noise

EO3: Pantograph ............................................. 232

Low-Noise Pantographs and Insulators

Considerations for High Performance Pantographs

Experimental Aeroacoustical Study of the TGV Pantograph Recess
Phototube Sensor for Active Pantographs

**Specialist Sessions**

**ES1: Aerodynamics Simulation** ........................................ 237
The Reduction of Disturbance of the Train Draft Pressure in Passing by Each Other
Numerical Simulation of the Flow Around a Six-Coach High Speed Train
RAPIDE: A Project of Joint Aerodynamics Research of the European High-Speed Rail Operators
Methodology for Computing the Flow Around a High Speed Train for Drag Estimation and Validation Using Wind Tunnel Experiments
A Cooperation Study between RTRI and SNCF on Aeroacoustics: Numerical Simulations and Measurements of the Aerodynamic Noise of Car Body Irregularities

**ES2: Noise Distribution** .................................................. 242
Passive Lift Suppression Mechanism for Low Noise Pantograph
Prediction of the Effect of Noise Barriers for Railway by Two-Dimensional BEM
Acoustic Characteristics of Aeroacoustic Noises Radiated from Simplified Models on a Flat Base
Project on an Innovative Acoustic Barrier, Particularly for Railway Superstructures
Annoyance due to Combined Noise Sources
Wind Tunnel Tests for Reducing Aeroacoustic Noise from High-Speed Trains

**Poster Sessions**

**EP1: Electromagnetic Compatibility** ............................... 249
Computation of Inductive Coupling between Electrified Railways and Communication Cables
Multisystem Harmonic Detection and Analysis in Real Time for Electromagnetic Conducted Emissions in Railways Environment
Evaluation of the Mutagenic Activity of Magnetic Fields
Comparison between Measurements and Simulations on 25 kV Traction Power Supply Systems
The Electromagnetic Environment of Railway Installations: Modelling Techniques
Perspectives of Modeling and Integration Activities for the assessment of Electrical System Compatibility for Advanced Rail Vehicles (ESCARV EU Project)

Electrical System Compatibility for Advanced Rail Vehicle (ESCARV): A Crosss-Company and Multi-National Project for Modeling Predicting Interoperability Problems

**EP2: Energy** ................................................................. 256

High Temperature Superconducting Transformer for Railway Application

Advanced Energy Management on Railway Vehicles

Development of Single Phase Feeding Power Conditioner for Shinkansen Depot

Two Control Center and Switching Methods of CSC System

Development of Substation Support System for DC Electric Railways

Minimization of Sensors in Traction Drives by Speed Sensorless Motor Control

Sensitivity Analysis of Railway Line Impedance to Variations of Electrical and Geometrical Parameters

Feasibility of Fuel Cell Rail Vehicles

**Author Index** .............................................................. 265
