Contents

Akimoto, H.; Matsuzaki, Y.; Ogawa, Y.; Takezume, T.; Kubo, S. 3
Wind tunnel measurements of 6-component forces and moments acting on a model of new wing-in-surface effect craft of all-wing type for 8 passengers

Alexandrov, G.V.; Gryazin, V.Y.; Strelkov, V.V. 13
Control automation of passenger ekranoplan

Azcueta, R.; Bertram, V. 22
High-performance marine vehicles as naval platforms - An overview

Barone, M.; Bertorello, C. 34
Resistance and structural modulus for multiattribute trimaran hull design

Begovic, E.; Boccadamo, G.; Zotti, I. 47
On the effect of viscous forces on the motions of high speed hulls

Bertorello, C.; Bruzzone, D.; Cassella, P.; Zotti, I. 60
High speed craft - Investigation on the resistance towing test procedure

Bolinger, C. 72
Construction of the world largest solar powered catamaran

Brizzolara, S. 87
Hydrodynamic design and analysis of unconventional fin stabilisers

Bruzzone, D.; Gualeni, P. 104
Numerical prediction of high speed catamaran behaviour in waves

Depascale, R.; Elefante, M.; Sebastiani, L.; Soave, M.; Viviani, M. 114
Identification of hydrodynamic coefficient from standard manoeuvres

El Moctar, O.M.; Bertram, V. 127
Rudder loads for a fast ferry at unusually high rudder angles

Elsasser, B.; Whittaker, T. 135
The excitation of ships by wave wash generated by high speed craft

Fach, K. 145
High speed craft in service

Folse, R.; Torti, F. 153
Slamming induced pressures on HSC

Fritsch, M.; Bertram, V. 167
Power prediction and hull improvement for conventional fast vessels

Gning, P.B.; Tarfaoui, M.; Collombet, F.; Davies, P. 178
Damage of composite cylinders under low-speed impact

Gosch, T. 186
Design criteria for the use of very high tensile steel in fast ships

Hasegawa, K.; Iqbal, K.S. 196
Environmental performance of land and marine transportation in inland shipping - Impact of ship speed

Hayman, B.; Osnes, H.; Skiple, A.; McGeorge, B. 204
Exploiting the non-linear response of sandwich panels in high speed craft design

Hellesoy, A. 219
Evacuation analysis as a design tool
Jensen, A.E.; Taby, J.; Pran, K.; Sagvolden, G.
*Full-scale measurements of global loads on SES vessels built in FRP sandwich materials using networks of fibre optic strain sensors*

*R&D on an advanced ride control system for a high speed mono hull*

Koushan, K.; Steen, S.; Zhao, R.
*Wake wash minimisation by hull form optimisation using artificial intelligence*

Lavis, D.R.
*A new tool for assessing the cost-benefit of emerging technologies for naval and commercial ships*

Lindenauf, O.; Bertram, V.; El Moctar, O.M.; Gatchell, S.
*Aerodynamic flow simulations for an SES employing virtual reality post-processing techniques*

Luco, R.; Salas, M.; Tarfaoui, M.; Bertram, V.
*Finite element structural modelling of a composite-material multihull*

Lyngstad, A.O.
*Fatigue of high speed craft – In service experience*

Nusser, S.
*Fire safety assessment of equivalent design solutions*

Perez, F.
*The effect of length in a fast boat*

Schi"ffer, W.
*Paddle-steamer DS “Gallia” on the Lake Lucerne: High Tech of 1913 or 2002?*

Schmode, D.; Bertram, V.
*Aerodynamic flow computations for a Superfast ferry*

Schwetz, A.; Sahoo, P.
*Wave resistance of semi-displacement high-speed catamarans through CFD and regression analysis*

Seif, M.S.
*Parametric analysis on planing hull*

Tellkamp, J.
*Application of a Monte Carlo simulation for damage stability calculations*

Toxopeus, S.; Loeff, G.
*Manoeuvring aspects of fast ships with pods*

Urban, J.
*Energy dissipation in sandwich structures during axial crushing*

Wang, D.; Atlar, M.; Mesbahi, E.
*Experimental investigation on propeller wash using laser doppler anemometry*

Woodward, M.; Clarke, D.; Atlar, M.
*An investigation into the course stability and control of a fast, pod driven ropax*

Yoshida, Y.
*A scale effect check about resistance estimation of planing boats*

Oestvik, I.; Zaraphonitis, G.; Maisonneuve, J-J.
*A procedure for design of low-wash high-speed monohull ferries*

Pastoor, W.; Tveitnes, T.; Pettersen, Ø.; Nakken, O.
*Direct nonlinear hydrodynamic analyses for high speed craft*
