Low-lying Coastal Areas - Hydrology and Integrated Coastal Zone Management

International Symposium
Bremerhaven, Germany
9-12 September 2002

Koblenz 2002
### Contents

**Foreword** iii

**Keynote lectures on coastal zones**

Coastal change and the "Anthropocene": Past and future perspectives of the IGBP – LOICZ project  
Hartwig Kremer, Chris Crossland ....................................................... 3

Dealing with climate change and sea level rise in the Netherlands  
Douwe Dillingh ................................................................. 21

Analysis of tidal water levels along the German North Sea coastlines  
Jürgen Jensen, Christoph Mudersbach ................................................... 29

Coastal megacities of developing countries: Water sensitive urban development  
Yoslan Nur, J. Alberto Tejada-Guibert .................................................. 37

Are groundwater inputs into the coastal zone important?  
William C. Burnett, Henry Bokuniewicz ............................................ 45

**Tools for coastal zone management**

**Oral presentations**

Use of GIS techniques to study changes in land use and its distribution applied to a case study in Rio Chone (Ecuador)  
Paola Almeida Guerra ................................................................. 53

Studies on coastal zone management for aquaculture using GIS: Lesson from Indian experience  
Lalit P. Chaudhari ................................................................. 61

Human influences, ecological transitions and uncertainties of extrapolation of risks of selected sea level rise scenarios to India's coastal megacity, Cochin  
P.K. Dinesh Kumar ................................................................. 67

Risk assessment by calculating a maximum storm surge curve in Hamburg due to global climate change during the 20th century  
Gabriele Gönnert ................................................................. 73
Exchange of dissolved and particulate substances across the sediment-water interface in coastal environments: mechanisms and implications
Markus Huettel ................................................................. 79

Evaluation of design water levels and design wave run-up for an estuarine coastal protection masterplan
Hanz D. Niemeyer, Ralf Kaiser ........................................... 87

Tools for integrated coastal zone management
R. Krishnamoorthy, S. Ramachandran, P. Periakali .................. 95

The Florida Keys Carrying Capacity Study as an example of land use planning and coastal management implementation
Ann Lazar ................................................................. 103

Risk analysis within coastal zone management
Nicole von Lieberman, Stephan Mai ................................ 107

The need for research, monitoring, assessment and services to support integrated coastal zone management
Jen-Men Lo, A. Al-Salem ......................................................... 113

On design aspects of embankment in the coastal zone of Bangladesh
M. Monowar Hossain, Md. Rashedul Islam, Ayub Ali ................... 119

Synoptic field measurements in the context of hydrological changes in the Ems estuary
Jürgen Jensen, Torsten Frank, Christoph Mudersbach ..................... 127

The European Sea Level Service (ESEAS)
Astrid Sudau ................................................................. 133

Will algal blooms in the Baltic Sea increase in future? Model simulations with different eutrophication combat strategies
Thomas Neumann, Gerald Schernewski .................................. 139

Models as tools in coastal water management: eutrophication of the large, shallow Szczecin Lagoon
Magdalena Wielgat, Gerald Schernewski .................................. 147

Water resource management of a tropical mangrove estuary, northeast coast of India: An approach through environmental education
S.K. Sarkar, B. Bhattacharya ...................................................... 155

Poster presentations

Using the short-term Artemia toxicity test for coastal zone management in the Philippines
Aileen Leah G. Guzman ...................................................... 159
Hydrodynamic investigations in a sluice-influenced low-lying river catchment area
Jürgen Jensen, Torsten Frank ................................................................. 167

Transport of suspended sediment by coastal streams of Israel, the Qishon and the Alexander streams
D. Pekar, N. Greenbaum, B. Herut, A. Sandler ........................................ 173

Design guidelines for the reflection analysis of submerged breakwaters
Francisco Taveira-Pinto ........................................................................... 179

Groundwater

Oral presentations

Groundwater stress conditions in the south-eastern coastal zone of Sicily – GIS and management
A. Aureli, C. Silluzio ................................................................................ 187

Saline water intrusion into coastal aquifers of West Bengal, India
Amartya Kumar Bhattacharya ..................................................................... 197

The typological approach to submarine groundwater discharge (SGD)
Henry Bokuniewicz, Robert Buddemeier, Bruce Maxwell, Casey Smith .......... 201

Groundwater submarine discharge in Kolkhida (Georgia) and the universal criterion of contamination in the coastal zone
G. Buachidze .......................................................................................... 207

Diagnosing saltwater intrusion in the Vaippar estuary of Tamil Nadu, India
K. Kumaraswamy .................................................................................. 211

Submarine groundwater discharge, climate change and the coastal zone
Georgia Destouni, Carmen Prieto ............................................................ 219

Study of groundwater-seawater interactions in the Aral Sea basin
Evgueni A. Kontar, Yuri A. Ozorovich, Abdulkhakim Salokhiddinov .......... 225

The distribution of the physico-chemical parameters within the coastal groundwater (Morocco)
Lahcen Zouhri ....................................................................................... 231

Sea water intrusion: The profile of some selected Western Asia/Middle East countries
Loulou H. Kobeissi, Mohamed J. Abdulrazzak .......................................... 235
Modeling the magnitude of submarine groundwater discharge and its effect on sediment chemistry
M. Schlüter, E. Sauter, R. Hinkelmann ................................................................. 243

Hydrology of and conflicts over shallow groundwater use and management in low coral islands
I. White, A. Falkland, L. Crennan, T. Metutera, B. Etuati, E. Metai, P. Perez, A. Dray ................................................................. 249

Temporal variations of submarine groundwater discharge and freshwater/saltwater interaction in the coastal zones
Makoto Taniguchi ................................................................. 257

Poster presentations

Reducing shallow-well contamination in Uganda
J. Mwami ................................................................. 263

Measures for integrated coastal zone management

Oral presentations

Integrated coastal zone management in Sri Lanka
G.T. Dharmasena ................................................................. 269

Integrated coastal zone management in Schleswig-Holstein
Jacobus Hofstede ................................................................. 277

A protection against flash floods: a study for Neaama Bay
Mohamed Hosny ................................................................. 281

An integrated approach to coastal zone management of Cameroon’s low-lying coast within the Gulf of Guinea
C.E. Gabche ................................................................. 289

Some aspects of coastal zone management in a tropical region
K. Shadananan Nair ................................................................. 295

Role of education, community participation and policies in coastal zone management: Report from the marine biosphere reserve on the southeastern coast of India
J.K. Patterson Edward ................................................................. 301

Eco-hydrological measures for the management of the Segara Anakan Lagoon basin in West Java, Indonesia
Hidyat Pawitan ................................................................. 307
ICZM initiatives in low-lying coastal Bangladesh
M. Rafiqul Islam ........................................................................................................... 315

Integrated coastal systems management in Tamilnadu – A case study of the Cuddalore to Chidhambaram area, eastern coastal region of Tamilnadu, India
AL. Ramanathan ........................................................................................................... 323

New development of seawall construction in Zhejiang Province, China
Yu Dajin, Jiang Wei ....................................................................................................... 331

Coastal defence in the Netherlands
J.W. Seijffert ................................................................................................................... 339

Integrated coastal zone management for coping with extreme events on the Orissa coast
R.B. Singh ...................................................................................................................... 347

Sea level rise and coastal land use in North Brazil: legal aspects
Claudio Fabian Szlafsztein, Rubén José Lara .................................................................. 353

Legislation on coastal zone management in India – An overview
K. Srinivasan .................................................................................................................. 361

Poster presentations

Management and sustainable development of coastal zones of developing countries – Long-term perspectives
P.K. Dinesh Kumar ........................................................................................................... 369

Development of integrated coastal zone management strategy for Pakistan
H.F. Gabriel ..................................................................................................................... 375

Water resources management in the marsh land of the Weser estuary
Ulrich Maniak, Gerhard Riedel, Alexandra Weihrauch, Susanne Brinck ......................... 383

Climate change: development of integrative management tools for coastal protection on the German North Sea coast
Bastian Schuchardt, Michael Schirmer ........................................................................... 391

Human activity management in the coastal zone of Sri Lanka
L.W. Seneviratne ............................................................................................................. 397

Change in lagoon inlets and coastal flood in Hue Region, Vietnam
Tran Duc Thanh, Tran Van Dien, Do Dinh Chien ............................................................. 403
Addresses ........................................................................................................... 411

Publications in the series IHP/OHP-Berichte ..................................................... 421
