American Society of Sugar Beet Technologists

Proceedings from the 31st Biennial Meeting Operations

Vancouver, BC
February 28 – March 3, 2001
TABLE OF CONTENTS

Dr. Judith B. St. John, Associate Deputy Administrator, United States Department of Agriculture, Agricultural Research Service, Beltsville, Maryland .................................................. 1

Mr. John Cropley, Senior Economist, Sugar Team, LMC International Ltd, New Orleans, Louisiana ................................................................. 39

SECTION D - Chemistry and Instrumentation

Ion chromatographic determination of cations in sugar beet process samples.
   D. E. Rearick and Cheri R. McKay ................................................................. 47

Overview of the development and application of near infrared spectroscopy at American Crystal Sugar Company.
   Beverly J. Jacobson, Joseph H. Wallevand, Terry D. McGillivray and C. Gary Fischer ................................................................. 54

Uses of total organic carbon and inorganic carbon analysis in the sugar beet factory.
   Jeffrey L. Carlson, Upasiri Samaraweera and Ken A. Kubat ................................................................. 61

Investigation of real time sugar detection in boiler feed and cooling waters.
   Gary Wein ........................................................................................................... 65

Concentration measurement for continuous boiling processes.
   Karl-Heinz Theisen, Klemens Senkowski and Tim Diringer ................................................................. 78

The bactericidal effect of hop derived β-acids.
   Mike Fowers ........................................................................................................... 79

SECTION F – Factory Operations

Fluidized-bed steam dryers. Steam drying of sugar beet pulp; operational, environmental and energy impacts as a result of the installation.
   M. R. Suhr ........................................................................................................... 85
Steam drying of beet pulp; Background for the new design; Energy saving; Beet pulp as the only fuel.
A. S. Jensen .................................................................................................................. 102

The Fractal Softener.
M. Kearney, L. Velasquez, K. Petersen, M. Mumm, and B. Jacob ......................... 109

New generation of molasses chromatographic separators using FAST technology.
H. Paananen and F. Rousset ...................................................................................... 115

Industrial performance of the mechanical vapor recompression and multiple-effect evaporator system: successful operation and significant reduction in steam usage.
J. M. Hude and J. D. Pope ......................................................................................... 124

Evaluation of emerging technologies: Importance of correct analytical procedures.
V. Kochergin, S. Olmstead and W. Jacob ................................................................. 137

Adding soda ash to the main limer, not as odd as you might think.
J. L. Carlson and U. Samaraweera ........................................................................... 143

Bench scale studies to evaluate the effectiveness of several biocides and chemicals with comparisons to factory trials.
I. S. Samaraweera, C. G. Fischer, D. L. Rheault, W. J. Colonna and L. Buschette..... 145

Benefits for a beet handling system by polymer assisted mud removal in a flume clarifier.
O. Fuentes, R. O. Hatch, J. Emmons and A. S. Grzemski ........................................ 161

Practical experiences with the new extended program of BMA pulp presses.
U. J. Schwanke ........................................................................................................... 171

Successful introduction of a new generation of batch centrifugals.
R. Hempelmann .......................................................................................................... 177

World largest tower diffuser from BWS - Buckau-Wolf system.
M. Makina .................................................................................................................... 189

Cooperative R&D in the sugar industry.
V. Kochergin .............................................................................................................. 199

Real-time monitoring of industrial processes provides improved control capability.
Jay Creiglow, William Stewart, Nigel Mohammed and Monica Keil..................... 205

Ion balance and pH changes of juice during evaporation.
Upasiri Samaraweera, Jeffrey L. Carlson and Ken A. Kubat ................................. 209
Use of coal ash generated at Minn-Dak for soil stabilization at a sugarbeet-piling site.
Jeffrey L. Carlson, Pete W. Jensen, John Groneman, Parker J. Thilmony,
Melanie G. Niday and Jon Scharf ................................................................. 211

Control of odors in the sugar beet processing industry.
Terry L. Robbins and Clovis E. Sarmento ....................................................... 219

Review of start up and first year of operation of Rogers Sugar Taber wastewater treatment plant.
Jan With and Eugene T. Natrasany ................................................................. 229

Operational and economic considerations of using a belt press for dewatering soil washed from sugarbeets.
Dennis L. Kallstrom, Jeffrey L. Carlson, David P. Gruenuich and David O. Larson . 243

Building trust with state and local government environmental agencies.
Joel C. Smith ..................................................................................................... 249

Communicating with the public on environmental issues.
Joel C. Smith ..................................................................................................... 253

Survival of pathogenic bacterial organisms in challenge studies of fine granulated sugar.
Indrani S. Samaraweera, Lynn Buschette and Diane L. Rheault ......................... 257

Tightening the links in your supply chain to improve profitability and enhance customer satisfaction.
Terry P. Cawley ................................................................................................ 271

Major factory expansion addresses environmental, labor and energy.
Mark Suhr ........................................................................................................... 277

Sugar Quality Forum
Moderator: Charlie Schmalz ............................................................................ 301

Future directions for the sugar beet industry. Joint Forum.
Moderator: Vic Jaro .......................................................................................... 305

POSTER SESSION - Operations

Liquid Filter Eliminates Maintenance & Downtime.
Gideon Brunn ..................................................................................................... 343

Ultrafiltration of beet diffusion juice using spiral and tubular polymeric membranes.
Anthony C. Eringis, Imran M. Jaferey and Lorraine F. Attridge ......................... 345
