# TABLE OF CONTENTS

## VOLUME I

### Session 1: Open-Channel Turbulence

- Open-channel turbulence and its research prospect in the new century
  - I. Nezu

- Effects of unsteadiness on velocity profiles and bed shear stress in strong unsteady open-channel flows
  - I. Nezu and K. Onitsuka

- Secondary current structure in an open channel with a vegetation zone
  - T. Ohmoto, H. Sugimoto and H. Fukui

- Experimental study on interfacial turbulent structures in wind-induced water waves by synchronous LDA measurements
  - I. Nezu, S. Ushijima and K. Yoshida

- Effects of bed form on turbulent structure in an open-channel flow with side-cavities
  - I. Nezu, M. Yano and K. Onitsuka

- PIV measurements of side-cavity open-channel flows with several shapes of open-mouth
  - K. Onitsuka, I. Nezu and S. Takahashi

- Three-dimensional measurements with Laser Doppler Anemometers in unsteady depth-varying compound open-channel flows
  - I. Nezu, M. Sanjou and Y. Sakane

- Study on the key technology of digital particle tracking velocimetry for big area flow field
  - L. Wu and Z. Yan

- Turbulent characteristics of jet interacting with standing water wave
  - X.-W. Chen and C.-C. Hsu

- 1st and 2nd order approximate solutions of Reynolds equations in 3-D channels
  - S.-Q. Yang

- Boundary shear stress in smooth rectangular open channels
  - J. Guo and P. Y. Julien

- Modified log-wake law in smooth rectangular open-channels
  - J. Guo and P. Y. Julien

### Session 2: River Hydraulics

- On water surface oscillation in an open-channel flow with spur dikes
  - T. Ohmoto and R. Hirakawa

- A study on hydraulic characteristics of vegetative groins
  - K. Sugawara, T. Abe, A. Aihara and T. Takahashi

- Spectral analysis of pressure fluctuations under hydraulic jumps
  - B. Pirouz and M. R. Kavianpour

- Research on consequent water depths of hydraulic jump with abrupt lateral expansion
  - Z. Yan and S. Lu

- Limit opening ratio for choking flow phenomenon
  - B. Wu
Effect of shape of bridge pier on afflux
M. Ghodsian and M. Shafieefar

Hydraulic characteristics of the Upper Meghna River at the vicinity of the Meghna bridge
S. K. Bala, M. M. Hoque, S. M. U. Ahmed and M. A. Haque

Pressure fluctuations on stilling basins with negative slopes
M. R. Kavianpour and B. Mohammadi

An experimental study on water wing induced by separating Baffles on the steep channels
C. Zhou and M. Liu

Uplift forces on a hydromatrix-Module
R. Prenner and V. Kienberger

Effect of increased dredging length of the Gorai River off-take on lean season flow of the Gorai River in Bangladesh
F. A. Mohiuddin

Experimental studies on the hydraulic characteristics of geo-textile sandbags
L. Zhu, J. Wang, Q. Yin and B. Sun

Experimental study on the jet dredge device
X. Long, J. Zhu, H. Lu and J. Liu

Experimental investigation on the flow through hanged-plate of the two-storey intake
J.-M. Zhang, Y.-R. Wang, Y.-Q. Yang and W.-L. Xu

Effective parameters on vortex formation at power intakes
A. R. Daemi

Session 3: Sediment Transport and Fluvial Processes

Study on laws of incipient motion and transport rate of bed load
W. He, S. Cao, J. Yang, Z. Guo, C. Li and S. Yang

Studying on laws of incipient motion for non-uniform sediment
J. Yang, D. Fang, W. He, X. Liu and S. Cao

The nonlinear CUSP-catastrophe model of incipient motion for non-uniform sediment
J. Yang, D. Fang, W. He, W. Li and X. Liu

Observational study of initiation mechanism of debris flow caused by destruction of natural dam in a steep slope channel
K. R. Pathak, K. Suzuki and A. Kadota

Error introduced in measurements of bed load transport
A. A. Ghani, J. Ariffin, N. A. Zakaria, A. S. Yahya and S. Abdul-Talib

Hydrodynamic characteristics of sand particles and water in open-channel flows with bed-load transport
I. Nezu, R. Azuma and K. Onitsuka

An extended thermodynamic description of suspensions of rigid particles in moving fluids
G. Lebon and N. Depireux

Prediction of sediment discharge in rivers, estuaries and coastal waters
S.-Q. Yang and P. Lin

Flow structures and bed-load transport in vegetation flow
K. Watanabe, H. M. Nagy and H. Noguchi
Approximations of gamma function and Psi function and their applications in sediment transport  
J. Guo  
219

Behavior of sediment particles in rectangular settling tank  
K. Fujisaki and N. Nagata  
224

Experimental investigation on sediment control in lateral intakes using sill  
A. A. Abbasi, M. Ghodsian, M. Habibi and A. A. S. Neishabouri  
230

Variation of riverbed composed of sediment mixture with wide size distribution  
Y. Satofuka and T. Takahashi  
234

Effects of sand bar on sediment distribution in an alluvial river  
G. M. T. Islam, Md. M. Rahman, M. A. Hussain, M. A. Haque, Md. M. Hoque,  
O. Hinokidani and H. Takebayashi  
240

A study of the characteristics of suspended sediment load in the Kataniwa River Basin  
K. Hirabayashi, K. Sunada, S. Oishi and N. Miyazawa  
243

Sediment extraction by vortex tube  
Md. Nasir, Md. Noh, M. Michiue and O. Hinokidani  
249

Effect of sediment sorting on temporal variation characteristics of braided channels  
H. Takebayashi and T. Okabe  
255

Local scour by secondary flow around constriction in open channel  
T. Ishigaki and Y. Baba  
261

Time-dependent reliability analysis of local scour around bridge piers  
X. Chen and Y.-K. Tung  
266

Scour hole geometry downstream of a culvert  
M. Ghodsian  
272

Effect of seepage on scour caused by impinging circular jets  
S. B. Dugad and B. S. Pani  
276

Flow and scouring around piers and abutments  
Md. M. Rahman, M. A. Haque and M. S. Islam  
280

Local scour around artificial reefs  
M. Minami and A. Mano  
284

Effects of mining pit geometry on pit migration and bed longitudinal profile variation  
A. Farhadinazadeh and S. A. A. S. Neishabouri  
289

Hydraulic geometry and morphological aspects of an alluvial river in Bangladesh  
S. Tanzeeba and M. A. Mukto  
293

Measurement of flow and bed topography in an alluvial meandering river  
M. Munsur Rahman, M. A. Hussain, G. M. T. Islam, M. A. Haque, M. M. Hoque,  
A. I. M. Faisal, M. S. Rana, H. Takebayashi and O. Hinokidani  
299

Session 4: Computational Hydraulics

Application of grid generation techniques and simulation method in river flow  
M. Zhao, L. Xu, H. Tong and W. Huai  
307

Numerical calculation of near-wall region in unsteady open-channel flows  
I. Nezu and M. Sanjou  
311
A high-resolution FVS scheme for the dam-break problem
G.-F. Lin, J.-S. Lai and W.-D. Guo

Numerical prediction of free surface flows with QSI scheme on collocated grid system
S. Ushijima, I. Nezu and K. Yoshida

Lagrangian gridless model for structure-flow-floats triangular interaction
H. Gotoh, M. Hayashi and T. Sakai

Two-dimensional depth averaged numerical modeling of flow in channel transitions
T. Tingsanchali and L. V. Duc

Direct numerical simulation of turbulence structures in an open channel flow over sand ridges
S. Hayashi and T. Ohmoto

Development of numerical technique for advection with high-accuracy and resolution
K. Asai

Effects of channelization to flood control in lowland regions
N. L. Tuan and S. Satoru

2-D dam-break wave simulation
D. Wang, L. Cheng and Y. Wang

Development of two-dimensional numerical model of multi-phase flow and its application
to hydraulic phenomena
K. Kawasaki and K. Nakatsuji

Large eddy simulation of free surface turbulent flow in open channel with submerged vegetation
X. Su, C. W. Li and B. Chen

Numerical simulation of two-phase flow in aeration tank
J. Mao and D. Wang

Numerical simulation of turbulent flow through throat-type energy-dissipators
J. Dong, W. Xu, J. Deng, S. Liu and W. Wang

A 2D numerical modeling of mudflow and its applicability to the MT. Pinatubo area, Philippines
N. Miyazawa, K. Sunada, S. Oishi and K. Hirabayashi

Numerical simulation of flow through a horizontal intake with a step
Sh. H. Marghzar, N. Montazerin and H. Rahimzadeh

Riprap bed protections and turbulence calculation on the crooked mountain river with sand-gravel mixture
A. Kadota, K. Suzuki and Y. Yano

Simulation of reservoir bed profiles with sand-gravel mixture in a steep channel

Numerical simulations on development processes of dunes
T. Hosoda, T. Kato and S. Onda

Computation of morphological processes in a flume
B. M. Duc

Development and verification of a 2-D morphological model for local scour
S. Vongvisessomjai and P. Chatanantavet

Session 5: Pipe Hydraulics

Effects of check valve closure on fluid transients with air entrainment
T. S. Lee, H. F. Cheong and K. L. Ngoh
Occurrence of vaporization and negative wave pressure of waterhammer  
Y. Kono and M. Watanabe

Pressure-and-free flows in complex piping systems  
V. V. Tarasevich and A. A. Moroz

Visualization of submerged vortices in hydraulic model simulations  
T. S. Lee

On cavitation coefficients of hydraulic turbine in sediment laden flow  
S. Huang, J. Wang and Z. Cheng

Experimental investigation on the measurement of internal flow field in a model of closed pump sump with PIV  
B. Zhang, X. Li, Y. Li and Y. Wu

Hydraulic behavior of Howell bunger valves  
M. R. Kavianpour, A. Maqsoumi and S. A. Hashemian

An investigation of flow characteristic of aerated drag reduction in tube  
G.-Q. Dai, Q. Yang and R. Zhang

Water slug flow in long horizontal pipe caused by compressed air  
H. Ogawa, M. Ochiai and S. Endo

Comparisons of loss characteristics between symmetrical and asymmetrical compound bend pipes  
Z. Dong and Q. Xu

Throat-type dissipator in a tunnel  
S. Liu, W. Xu and W. Wang

Session 6: Hydrology

Computer modeling of upland erosion  
P. Julien and R. Rojas

Scour investigation around a group of two piers  
F. J. Sidek and Z. Ismail

A semi-distributed, modified temperature index approach for snowmelt modeling in the Canadian Prairies using near surface soil and air temperature  
P. R. Singh and T. Y. Gan

Correlation dimensions of climate sub-systems and their geographic variability  
T. Y. Gan, Q. Wang and M. Seneka

Measurement and modeling of evapotranspiration during plant growth  
H. Higashi and T. Oka

Effect of root distribution on change in soil moisture  
K. Inosako, Y. Nakano, M. Kuroda and K. Takuma

Recharge wells as a drainage system to increase of groundwater storage  
S. Sunjoto

Identifying representative rainstorm patterns in Hong Kong  
Y.-K. Tung

Time and regional extended effects by flood mitigation project  
Y. Takeuchi, K. Suga and M. Takezawa
Estimation of probable maximum flood hydrograph for Upper Kaneri Basin

V. G. Bhave and M. S. Shitole

Numerical simulation of flood lake behavior in Northeastern Bangladesh

T. Oka, M. Iguchi, S. M. U. Ahmed and S. K. Bala

Study on the 2000 flood in the Lower Mekong by field survey and numerical simulation

S. Kazama, Y. Muto, K. Nakatsuji and K. Inoue

Improvement of calibration procedure of the block wise TOPMODEL with Muskingum-Cunge routing method using sub basins simulated results: Application to part of the Lower Mekong river basin

N. M. N. S. B. Nawarathna, S. Kazama and M. Sawamoto

Estimation of parameters of a hydrodynamic runoff-erosion model with data from a semiarid region in Brazil

R. de Aragao, V. S. Srinivasan, K. Suzuki and M. Watanabe

Importance of rainfall models in catchment simulation

K. Umakhanthan and J. E. Ball

Flood control of Gutianxi cascaded reservoir under the circumstance of forecasting

M. Hu

Interaction of aquifer flow and observation wells detected by Particle-Image-Velocimetry

J. Lengricht and K.-U. Graw
