Reliability and Optimization of Structural Systems

Edited by

H. Furuta
Department of Informatics, Kansai University, Osaka, Japan

M. Dogaki
Department of Civil Engineering, Kansai University, Osaka, Japan

M. Sakano
Department of Civil Engineering, Kansai University, Osaka, Japan
# Table of Contents

Preface

**H. Furuta**

 Calibration of the design code for concrete structures  
* A.S. Nowak & M.M. Szerszen  

 Bayesian calibration of failure probability from observed performance  
* W.H. Tang & R.W.M. Cheung  

 Elastic bodies with random distribution of micro-cracks  
* G. Augusti, M. Gioffrè, P.M. Mariano & F.L. Stazi  

 Reliability and optimum design of fiber-reinforced composite material systems and structures  
* Y. Murotsu & N. Kogiso  

 Reliability-based optimization of symmetric laminated composite plate using lamination parameters  
* N. Kogiso, S. Nakagawa & Y. Murotsu  

 Effect of material quality on the performance of concrete bridges  
* M. Kaszynska & A.S. Nowak  

 Bridge management system for existing bridge groups  
* A. Miyamoto, K. Kawamura & K.C.G. Ong  

 Weibull polynomial model for probabilistic load analysis  
* M.D. Pandey  

 Probabilistic investigation on impact factor of deck slabs due to truck configuration type  
* C.W. Kim & M. Kawatani  

 Reliability model for girder bridge structural systems  
* C.D. Eamon & A.S. Nowak  

 Dynamic systems under random impulses driven by a generalized Erlang renewal process  
* R. Iwankiewicz  

 Reliability of low-rise buildings: experimental wind load modeling vs. building codes  
* M. Gioffrè, A. Grazini & V. Gusella  

 Managing structural failure mode dependence  
* J.J. Chambers  

 Statistical analysis of data for timber strengths  
* J.D. Sorensen  

 Web-based safety management system in construction of pre-stressed concrete bridges  
* M. Hirokane, A. Miyamoto, H. Konishi & J. Zhang  

 Stochastic modelling of the diffusion coefficient for concrete  
* P. Thoft-Christensen  

 Seismic response characteristics of seismically isolated bridge considering hardening effect of seismic isolator  
* Y. Adachi & S. Unjoh
Load factor of earthquake load considering non-linear behavior of steel bridge-pier
M. Kawatani, K. Kawaguchi & M. Tsujii

Evaluation of seismic resistant performance for steel rigid-frame piers of highway bridges with considering dynamic response characteristics
W. Shiraki, H. Inomo, H. Goto, H. Koshida & M. Dogaki

Reliability-based optimization of spatial shell trusses under multi-loading conditions
S. Jendo & K. Kolanek

Development of algorithms to identify non-stationary structural systems using statistical filter theories
T. Sato, T. Sakanoue & I. Yoshida

Maintenance support system of steel bridges based on life cycle cost and performance evaluation
H. Furuta, I. Tsukiyama, M. Dogaki & D.M. Frangopol

Failure diagnosis of water supply network by immune system
H. Inomo, W. Shiraki, Y. Imai & H. Kanamaru

Is the reliability of suspension bridge too high?
K. Imai & D.M. Frangopol

Measurement of human function to perceptive information – A trial by the approach of cognitive neuroscience
H. Nakayasu, K. Yamanaka & K. Maeda

Bayesian framework for Poisson mixtures
M.A. Maes

Time aspects in applying the life quality index to structural safety
R. Rackwitz

Highway variable amplitude long term fatigue behaviour of steel girders with welded attachments
M. Sakano

Author index
