## I MODELING WATER RESOURCES PHENOMENA

1

**Keynote by Daniel P. Loucks**

_D. P. Loucks_

Modeling and managing the interaction between watershed hydrology and ecology .......... 3

**Keynote by Günter Blöschl**

_G. Blöschl, R. Grayson_

Advances in distributed hydrological modeling .................................................................... 17

### Ia Watershed and river flow modelling .............................................................. 27

_P. Döll, B. Lehner, F. Kaspar_

Global Modeling of Groundwater Recharge .................................................................... 27

_S. G. García_

Scaling Studies with GIS-based Hydrological Modelling .................................................. 32

_D. C. Garen, D. Marks, A. H. Schumann_

Spatially Distributed Snowmelt, Water Balance and Streamflow Modelling for Water and Natural Resources Management in a Large Mountainous Catchment .................................................. 37

_A. Günther, A. Bronstert_

Process-based modelling of large-scale water availability in a semi-arid environment: process representation and scaling issues ............................................................................. 42

_J. Gurtz, M. Verbunt, K. Jasper, H. Lang, M. Zappa_

Spatial and temporal variations of hydrological processes in mountainous regions and their modelling .......................................................................................................................... 47

_H.-P. Hack, U. Kanzow_

Two-dimensional modelling of hydraulics in streams of large relative roughness ........ 52

_Y. Ichikawa, M. Shiiba_

Lumping of Kinematic Wave Equation Considering Field Capacity ................................... 56

_H.-J. Liebscher, V. R. Eichner, R. Oppermann_

From the empirical modelling approach to the complex river-basin model .................. 61

_O. N. Nasonova_

Investigating the ability of different land surface schemes to simulate hydrological processes for a boreal grassland watershed ............................................................... 66

_A. Rezzoug, A. Schumann_

New Analytical Solution of the Kinematic Wave Approach to Hillslope Subsurface and Saturation Overland Flow Analysis ......................................................................... 71

_J. Seegert, M. Armbruster, K.-H. Feger_

Application of the BROOK90-Watershed-Model to two contrasting forested Catchments in Germany - The potential Effects of Changes in Tree Species Composition on Water Flow Dynamics - ................................................................. 76
E. Stenitzer
Simulation of the Impact of Afforestation of Agricultural Lands upon the Water Balance in a Dry Area ................................................................. 81

B. Tetzlaff, F. Wendland, R. Kunkel, G. Dörhöfer
GIS-based determination of the mean long-term groundwater recharge in Lower Saxony ............................................................... 86

S. Wang, Y. Ding, R. Huang, L. R. Leung, M. S. Wigmosta, L. W. Vail
Studies on Regional Water Cycle and Hydrologic Modeling in North China .......... 91

M. Zappa, J. Gurtz
The Experience of Using a Response Units Based Model for Distributed Hydrological Simulations at Different Scales .................. 96

M. Zappa, J. Gurtz
The Spatial Resolution of Physiographic Data as Sensitive Variable for Distributed Hydrological Simulations in Prealpine and Alpine Catchments .......................... 101

1b Rivers and interacting surface-subsurface flow ............................................. 107

F. Bilek, F. Werner, L. Luckner
Prognostic Modeling of a Groundwater Management System influenced by River Flood Events ......................................................... 107

G. Foerch, J. Lehmann
Groundwater pollution in the Mojo area (Ethiopia) ..................................... 111

T. Grischek, D. Schoenheit, W. Nestler
Unexpected groundwater flow beneath the River Elbe at the bank filtration site Meissen, Germany ................................................. 116

G. Haimerl, F. Zunic
Infiltration Tests and Numerical Simulations to Evaluate the Efficiency of Infiltration in Arid Countries ............................................. 121

J. Jagelke, M. Schöninger, J. Wolff, J. F. Führbötter
Research on a coastal aquifer to evaluate the effect of a future flood barrier (River Ems, Northwest Germany) ....................................... 126

A. Mishra, T. Hata, H. Tanakamaru, A. Tada, A. W. Abdelhadi
Estimation of recession flow for the Blue Nile River ................................... 131

M. Müller, F. Werner, L. Luckner
A Tool for Conjunctive Groundwater and Surface Water Quality Modeling in Post Mining Areas ......................................................... 136

1c New aspects for modeling subsurface flow ..................................................... 143

M. E. Birpinar, Ş. A. Gazioglu
Aquifer Parameter Estimation By A New Technique In Unconfined Aquifers .......... 143

I. Braud, Z. Boujamaaoud, T. Bariac, J.P. Gaudet
Modelling of heat, water and stable isotope ($^2$H$_2$O, $^1$H$^16$O) transfer in non-saturated soils. Model description and first validation on bare soil columns .......................... 148

U. Buczko, L. Hopp, W. Durner, S. Peiffer
In-situ lysimeter experiments for validating predictions of contaminant leachate transport in unsaturated soils ........................................ 153
R. Crosbie, P. Binning, J. Kalma
The Spatial and Temporal Variability of Groundwater Recharge Estimates From Time Series Analysis .................................................................................................................. 158

I. Joris, J. Feyen
Using temperature profiles to estimate groundwater inflow/outflow in an alluvial wetland ...................................................................................................................... 163

S. Lallahem, J. Mania, A. Hani
A Study of Daily Aquifer Outflow Simulation and Determination of Influencing Parameters using Neural Networks Approach .............................................................................. 169

R. Liedl, M. Willmann, S. Birk, M. Sauter
Leakage of Dams due to Rock Dissolution in Gypsum Karst Regions with the Example of Horsetooth Dam, Colorado ...................................................................................... 176

C. F. Mahler, I. Alimi-Ichola
Development of equipment to measure the suction, the water content and the dielectric constant of unsaturated soils ................................................................................... 181

G. Parkin, J. Pollacco, I. Calder, I. Reid, T. Nisbet, J. Green
Inverse modelling of unsaturated zone processes for recharge prediction under different land uses ............................................................................................................. 186

A. Rezzoug, A. Schumann, H. Zepp, P. Chifflard
Field Measurement Of Soil Moisture Dynamics And Numerical Simulation Using The Kinematic Wave Approximation ................................................................. 191

M. Sauter, S. Birk, R. Liedl
Integrated Approach to Characterise the Geometry of Karst Conduit Systems at the Catchment Scale ................................................................................................. 196

G. H. Schmitz, W. Droege, H. Puhlmann
Evaluation of soil-hydraulic properties: Artificial Neural Networks as an efficient alternative to inverse modeling techniques ......................................................... 202

N. Schütze, G. H. Schmitz
Self-organizing maps as a new tool for optimizing irrigation parameters .......... 209

D. J. Wilson, A. W. Western, R. B. Grayson, R. A. Woods, T. A. McMahon
Predicting the spatial distribution of soil moisture from measurements made at a limited number of point locations ................................................................. 214

Id Atmospheric processes and impact of greenhouse effects ........................................ 219

F. Bouraoui, B. Grizzetti, S. Rekolainen, K. Granlund, G. Bidoglio
Impact of Climate Change on Water and Nutrient Losses in a Finnish Catchment ...... 219

S. G. Boychenko
Semi-empirical statistical models of connection of repeatability of the catastrophic phenomena in Europe with global temperature anomalies in last millennium (on the basis of historical records and annals) ................................................................. 224

A. Frost, G. Kuczera, M. Thyer
Modelling Annual Rainfall Variability Using a Switch Hidden State Markov Model...... 230

E. Guevara
Design Parameter Modeling of Tropical Storms in Venezuela ................................ 236

M. Hasebe, R. Taketaka, H. Inoue
Chronological characteristics of the atmosphere concentration of carbon dioxide (CO₂) at global scale by using time series analysis ......................................................... 240
II WATER RESOURCES MANAGEMENT

Keynote by Keith W. Hipel
K. W. Hipel, L. Fang, D. M. Kilgour
Decision Support Systems in Water Resources and Environmental Management........ 287

Keynote by Uri Shamir
U. Shamir
Risk and Reliability Considerations in Sustainable Water Resources Management..... 301

IIa Engineering aspects of regional water resources management and sustainability.................................................. 307

M. H. Afshar
An Improved Genetic Algorithm For Pipe Networks Optimization ......................... 307

Optimization Of Groundwater Management For An Unconfined Aquifer............... 312

G. Dandy, P. Bennett, N. Coles, T. James, J. Nield
Optimum Design Of A Stormwater Detention And Treatment System .......................... 317

P. Döll, J. C. Araújo, M. Mendiondo
Modeling of Present and Future Water Use in Two Semi-Arid Brazilian States as a Basis for Water Resources Planning............................. 322

T. Haktanir, M. Ardiçlioğlu
Engineering Studies for Installation of A Hydropower Plant to The Outlet of Shaft Spillway of The Existing Sarimsakli Dam Serving Irrigation Purpose ........................................ 327

S. A. Hamidi, R. Ardakanian
Mid-Term and Short-Term Models for Optimal Coordinated Operation of Multi-purpose Reservoirs and Thermal Power Plants........................................ 332

A. W. Heemink, K. Ponnambalam, S. G. Fletcher
The challenges in multi-reservoir systems design and operations optimization.......... 337

L. Logan, K. Ponnambalam, K. Hipel
Reliability Profiles For Extreme Streamflows.................................................. 342

K. Mazur, B. Ehret, W. Rolland, U. Grünewald
Reservoir management of post mining lakes – finding the balance between the needs to stabilise the water resources and the risk to deteriorate the water quality .......... 347

S. Riad, A. M. Ebraheem, P. Wycisk, A. M. Seif El-Nasr
Simulation Of Impact Of Present And Future Groundwater Extraction From The Non-Replenished Nubian Sandstone Aquifer In Sw Egypt............................ 352

G. A. Schultz
The relevance of long-term predictions for planning sustainable water resources systems.......................................................... 361

R. Singh, A. Mishra, N. S. Raghuwanshi
Opti-Simulation Modelling for Improved Performance of the Main Canal System...... 367

A. Tilmant, M. Vanclooster
Soft Information in Planning Reservoir Operation.............................................. 372

IIb Integrated water resources and environmental management.......................... 377

A. Bronstert, M. Krol, A. Jaeger, A. Güntner
Integrated modelling of climate, water, soil, agricultural and socio-economic processes: a general introduction of the methodology and some exemplary results from the semi-arid Northeast of Brazil .......................................................... 377

O. Dietrich, M. Redetzky, K. Schwärzel
Modelling the water balance of wetlands with drainage/sub-irrigation systems and surface water surplus integrated in watershed management model ......................... 382

N. Fohrer, N. Steiner, D. Möller
Multidisciplinary trade-off functions for land use options in low mountain range areas - A modelling approach ................................................................. 387

S. D. Gorantiwar, I. K. Smout
The Optimum Irrigation Water Allocation for the Heterogeneous Irrigation Schemes with Limited Water Supply.......................................................... 392

T. Kojiri, Y. Kinai, J.-H. Park
Integrated River Basin Environment Assessment On Water Quantity And Quality By Considering Utilization Processes ........................................... 397

D. O’Grady, M. A. Wilson
Phosphorus Trading in the South Nation River Watershed, Ontario, Canada ............. 402

M. Rode, B. Klauer, P. Krause, K.-E. Lindenschmidt
Integrated River Basin Management, the Saale Project...................................... 408

V. Wenzel, R. Eidner, W. Finke, R. Oppermann, C. Rachimow
Integrated water resources management in terms of quantity and quality in the Berlin region under the conditions of global change ........................................ 413
M. A. Yurdusev, A. A. Kumanlioğlu
Challenges Faced in Implementing Integrated Water Resources Management in Developing Countries .................................................. 417

U. Zimmerman, F. Sieker, H. Sieker, H. Sommer
Combination of software tools for designing an integrated storm water management plan of the river Glems .................................................. 420

IIc Decision Support Systems and water resources management .................................................. 427
M. De, K. W. Hipel, B. Fu
Conflict Analysis of the North Battleford Water Supply Crisis .................................................. 427

L. Fang, K. W. Hipel, L. Wang
Gisborne Water Export Conflict Study .................................................................................. 432

A. Grangler, D. Nickel, M. Hohmann, R. Enders, M. Jekel
Evaluation of scenarios for regional water management by means of energy- and substance flow analyses - a decision-support concept .................................................. 437

D. M. Kilgour, K. W. Li, K. W. Hipel
Status Quo Analysis, GMCR II, and the Flathead River Water Resources Dispute .................................................. 442

R. A. Letcher
Policy implications of results from an integrated hydrologic-economic model in the Namoi Basin, Australia .................................................................................. 446

B. Nilkens, H. Rubin, J. Kögeter
An Evaluation of the Requirements for a Decision Support System .................................................. 451

E. Nizeyimana, B. M. Evans, G. W. Petersen, A. Fisher, W. S. Brown, L. McDonnell
Determining Total Maximum Daily Loads for Watershed Management in Pennsylvania, United States .................................................................................. 455

H. Sakakibara, S. Kawakami, K. Furukawa, N. Okada
Game Theoretic Analysis of Dynamic Process for Self-Enforcing Agreement in Conflicts on Water Resources Development .................................................. 460

F. Schlaeger, H. Schonlau, J. Kögeter

IId Economic, organisational and reliability aspects of water management systems .................................................. 473
C. Asahi, K. Hagihara
The fiscal risk sharing system for water contamination .................................................................................. 473

C. Brass, A. H. Schumann
Planning of Operation for Multipurpose Reservoir Systems to Enhance their Reliability under Changing Conditions .................................................................................. 478

F. J. Convery
Mobilising market forces to integrate water and environmental management – Municipal Water Management in Ireland and Chile compared .................................................................................. 484

M. Cotman, J. Zagore-Končan
Ecotoxicological approaches for the assessment of point sources of pollution on receiving water .................................................................................. 489

J. Gilmour, R. Letcher
Results from an Integrated Model for Assessing the Impacts of Water Allocation Policy at the Catchment Scale .................................................................................. 494
K. Hagihara, A. Oka
Application of Tradable Permit Systems to Water Quality Management in Watershed in Japan .......................................................... 499

L. M. Hermans, N. El-Masry, T. M. Sadek
Stakeholder Analysis to Support Water Resources Management in Egypt .................. 504

K. W. Hipel, D. M. Kilgour, N. Z. Zhao
Risk Analysis of the Walkerton Drinking Water Contamination Tragedy ...................... 509

D. Rosbjerg, T. R. Kjeldsen
Assessment of Water Resources System Sustainability .............................................. 514

M. Sakamoto, Y. Hagihara
A Model Analysis of the Process for Building Consensus under the Conflict Situation between Development and Environment ........................................... 518

A. K. Sikka, S. Chand, V. N. Sharda
Environmental Economics Of Planting Bluegum In Natural Grass Land Watersheds Of Hydro Electric Reservoirs In The Nilgiris ........................................ 524
