CONTENTS

Direct Transfer Substructure Method for Random Response Analysis ..............................1
Changqing Bai and Qingyu Xu

Dynamic Stiffness Method for Free Vibration Analysis of a Two-Part
Beam-Mass System .................................................................9
J. Ranjan Banerjee and Huijuan Su

Singular Conditioning of Processes and the Random Decrement Method ......................17
Pierre Bernard

Generation of Bounded Stochastic Processes .........................................................27
Guo-Qiang Cai

Recursive Expression for Nonstationary Responses of Structures Excited
by Evolutionary White Noises ......................................................................35
Kui-fu Chen, Sen-wen Zhang and Su-qing Huang

On the Approximation of Invariant Measures of Stochastic Dynamical Systems
under Multiplicative Noise .........................................................................43
Martin G. Cichon and Walter V. Wedig

On Using Non-Gaussian Distributions to Perform Statistical Linearization ..............49
Stephen H. Crandall

Bifurcations with Slow Parametric Variation Controlled by Noise ............................63
Huw G. Davies

Stability Analysis of Vibro-Impact Systems with Stochastic Parameters ....................71
Wangcai Ding and Jianhua Xie

Wavelets Based Representation of Stochastic Processes with Evolutionary Spectra ......79
Giuseppe Failla and Pol D. Spanos

On the Unified Approach to Evolutionary Random Response Problems ....................87
Tong Fang, Xiao-Lei Leng, Jun-Qiang Li, Tian-Shu Zhang, Mu-Nan Sun and Huai-Jiang Sun

Parametric Bifurcations in Nonlinear Time Delay Systems .....................................95
Mustapha S. Fofana and Brendan Powers

Stochastic Stability of a Delay Version of the Duffing Equation .............................103
Mustapha S. Fofana, Yang Yong and Brendan Powers

Performance-Based Design and Seismic Reliability Using Designed Experiments
and Neural Networks ..............................................................................109
Ricardo O. Foschi and Jiansen Zhang

Partial-Average Based Studies of Benchmark Incompressible Turbulent Flows ..........117
Ge Gao and Yan Yong
Numerical Approaches to the First Passage Probability in Bridge Buffeting Response
Yaojun Ge, Lin Zhao and Quanshun Ding

Stochastic Buckling Analysis of a Joined-Wing
Debraj Ghosh, Roger Ghanem and Chris Pettit

The Integer Multiple Spiking in Autonomous Experiments on Neural Pacemaker:
Is It Caused by Autonomous Stochastic Resonance or Chaos?
Huaguang Gu, Zhiquiang Liu, Minghao Yang, Li Li and Wei Ren

A VR-Based Test and Simulation System—with Application in Non-Destructive
Evaluation
Tian-Tai Guo, Xiao-Jun Zhou and Gen-Xing Zhu

The Assessment of Ride Comfort of Moving Road Vehicles under Crosswind
Wen-Hun Guo and You-Lin Xu

Stochastic Model of Contact System
Hua He and Qi Feng

Redundancy Index for Mitigation Measures to Lifeline Seismic Risk
Masaru Hoshiya, Kinya Yamamoto and Haruo Ohno

A Stochastic Model for Localized Disturbances and Its Applications
Zhikun Hou and Adriana Hera

Random Stability Analysis of a Slender Beam Undergoing a Large Linear Motion
of Basement Subject to Narrow-Band Random Parametric Excitation
Hai-Yan Hu and Zhi-Hua Feng

Wind-Induced Vibration Control of High-Rise Building with Random Parameters
Bin Huang and Weilian Qu

Stochastic HOPF Bifurcation of Four-Wheel-Steering System
Dong-Wei Huang, Hong-Li Wang, Yu Qiao and Zhi-Wen Zhu

Jump and Bifurcation of Coupled Duffing-van der Pol Oscillators under Combined
Harmonic and White Noise Excitations
Zhi-Long Huang, Li-Xia Gao and Wei-Qiu Zhu

Exact and Approximate Stationary Responses of Multi-Degree-of-Freedom Vibro-Impact
Systems Subject to White Noise Excitations
Zhi-Long Huang, Zhong-Hua Liu and Wei-Qiu Zhu

A Time-Domain Reliability Assessment Technique for Nonlinear Structures
Jungwon Huh and Achintya Haldar

Linear Dynamical Systems under Random Trains of Non-Overlapping, Arbitrary-Shape
Pulses with Erlang Durations and Time Gaps
Radoslaw Iwankiewicz and Soeren R.K. Nielsen

Stochastic Response Estimation of Wind-Excited Structures with Uncertain
Parameters
Wei-Liang Jin and Zhi-Gang Song
A Study on Stochastic Resonance of Two-Dimensional Brownian Motion in a Bistable Potential
Yan-Mei Kang, Jian-Xue Xu and Yong Xie ............................................................... 255

An Efficient Method for Calculation of Reliability Integrals
Lambros Katafygiotis and Joseph Sai Hung Cheung .............................................. 263

Wedge Simulation Method for Calculation of Reliability of Linear Systems Subjected to Gaussian Random Excitations
Lambros Katafygiotis and Joseph Sai Hung Cheung .............................................. 271

Stochastic Predictive Control of Structures Using ARMA Models
Ali Keyhani ................................................................................................................ 279

Stochastic Active Walks and Positive-Feedback Systems
Lui Lam ....................................................................................................................... 287

Stochastic Perturbation Analysis for Evolutionary Random Response Problems of Random Structures
Xiao-Lei Leng, Tong Fang, Chang-Qing Song and Jun-Qiang Li ......................... 293

Probability Distribution of the Maximum Elastoplastic Story Drift of Steel Frames Subjected to Earthquake Load
Gang Li and Gengdong Cheng ............................................................................... 301

Probability Density Evolution Method for Dynamic Response Analysis of Stochastic Structures
Jie Li and Jian-Bing Chen ....................................................................................... 309

Dynamical Modeling and Application of Complex Viscoelastic Structure
Ning Li, Jinghui Zhang and Xinong Zhang ................................................................. 317

Random Vibration Analysis of Tall Buildings
Qiusheng Li, Yahui Zhang, Jiurong Wu and Jiahao Lin ........................................ 325

Identification of Hysteretic Structural Systems with Slip by Bayesian Method and Bootstrap Filter
Shujin Li, Yoshiyuki Suzuki and Mohammad Noori .................................................. 333

Nonlinear Frequency-Domain Analysis of Jack-Up Platforms
Chih Young Liaw and Xiang Yuan Zheng ................................................................. 345

An Innovative Algorithm for Random Vibration Analysis of Complex Structures
Jia-Hao Lin, Ya-Hui Zhang and Yan Zhao ................................................................. 353

Sample Path Behavior of Gaussian Processes
Zheng-Yan Lin ........................................................................................................... 363

Noise Control Technology of Liquid-Filled Piping Systems
Xue-Jun Lu, Kai-He Wang, Wei Xu and Ming-Lin Sui ........................................... 371

Semi-Active Control of Randomly Wind-Excited Tall Building Structures Using MR-TLCDs
Yi-Qing Ni, Zu-Guang Ying, Jian-Yi Wang, Jan-Ming Ko, and Bill F. Spencer, Jr. .... 377

Structural Reliability Analysis of Active Control Based on Ground Velocity
Miao Pang and Kevin K.F. Wong ............................................................................. 385
Unified Representation of Gaussian Random Fields .............................................393
Fabrice Poirion and Bénédicte Puig

Excursion Probabilities of Linear and Nonlinear Systems .................................401
Helmut J. Pradlwarter and Gerhart I. Schuëller

Different Effects of Noise on Two Kinds of Bifurcations in Experimental Neural Pacemakers ..............................................................409
Wei Ren, Huaguang Gu, Minghao Yang, Li Li and Zhiqiang Liu

A New Approach for Approximation Solutions of FPK Equations ......................415
Haiwu Rong, Xiangdong Wang, Guang Meng, Wei Xu and Tong Fang

The Robustness of an Efficient Probabilistic Data-Based Tool for Simulating the Nonstationary Response of Nonlinear Systems .........................423
Andrew W. Smyth and Sami F. Masri

Random Uncertainties Modeling for the Medium-Frequency Dynamics .............429
Christian Soize

Monte Carlo Simulation of Global Supply Chain Management Systems .............437
Prapoj Srinuwattiwong and Chingping Han

Exact and Equivalent Solutions of Two-Degree-of-Freedom Nonlinear Systems under Stationary White Noise Excitations ..................................445
Cho W.S. To

Some Advances in Nonlinear Stochastic Evolution Models of Neuron Population ....453
Rubin Wang and Zhikang Zhang

Simulation of Nonstationary Random Processes Based on Hilbert-Huang Transform .....463
Yi-Kwei Wen and Ping Gu

Transient Behaviors of Linear and Nonlinear Systems under Stationary Non-Gaussian Random Excitation ................................................473
Changfu Wu and Guo-Qiang Cai

Study of Stochastic Fatigue Crack Growth Models and Their Experimental Verification .............................................................485
Wen-Fang Wu and Chi-Chung Ni

Truss Topology Optimization Subjected to Stochastic Excitation .....................493
Bin Xu and Jie-Sheng Jiang

The Applications of Parameter-Tuning Stochastic Resonance in Signal Processing ...501
Bo-Hou Xu, Hua-Feng Li, Fa-Bing Duan and Jian-Long Li

Global Analysis of Stochastic Bifurcation in UEDA System ..............................509
Wei Xu, Qun He, Haiwu Rong and Tong Fang

Damage Identification of Linear and Nonlinear Structures Based on a Tracking Approach ..........................................................................517
Jann N. Yang, Silian Lin and Shuwen Pan

Numerical Path Integration of a Nonlinear Oscillator Subject to Both Sinusoidal and White Noise Excitations .............................................525
Jinshou Yu and Yukweng Lin
