Volume 2
Volume 2

Soft ground tunnelling

Experiences with the application of innovative shield tunnelling techniques during the construction of the Betuweroute

J.H. Jonker, D. Handke & S. van der Woude

Westerschelde Tunnel: integrating the fitting out during the boring process – a complex period

R. de Leeuw & E. Oele

Construction of the Copenhagen Metro

J. Nymann & S.D. Taylor

Railway crossings for Randstad rail in Rotterdam

D.C. van Zanten & M. de Vries

Geotechnical design and construction aspects of the Tsing Tsuen tunnels – contract DB320 KCRC West Rail Project

R.B. Story, A.S. Stenning & A.N. MacDonald

Investigating the settlement above closely spaced multiple tunnel constructions in soft ground

D.N. Chapman, C.D.F. Rogers & D.V.L. Hunt

Metro Barcelona Línea 9 – Europe’s greatest metro project with shield tunnel boring machines of large diameters

X. Borràs i Gabarró, R. Botè i Frech, B. Maidl & N. Della Valle

Mechanized tunnelling in urban environment: control of ground response and face stability, when excavating with an EPB machine

V. Guglielmetti, P. Grasso, F. Gaj & G. Giacomin

New developments with EPB-technique in coarse sands by using foaming agents

B.K.J. Obladen, O.M.Th. Vos, W. Puntke & B. Gaertner

New realisation of driving Shield Tunnel Boring machines in Thailand

C. Photayanuvat & C. Schultz

Tunnelling through the boulder-containing Tachikawa Gravel Bed using a multi-stage shield machine

Y. Sakai, Y. Tsuchiya & T. Sukigara
Design and construction of urban tunnels beneath operating railway
M. Kobayashi, S. Seki, I. Iwamura & H. Nagai

Research and testing of self-compacting concrete (SCC) for tunnelling under realistic conditions
R. Pierson, F. Dehn, F. Dahlhaus & S. Sanft

Construction of a triple-spectacle-shape tunnel beneath operating railway tracks
S. Matsuoka, H. Fujii, T. Aoyagi, S. Seki & I. Iwamura

Removal of the utility tunnel by shield method to build the underground expressway
M. Ogasawara, H. Hanno, N. Kwada, S. Oba & Y. Kuramochi

F-NAVI shield tunneling method – simultaneous excavation and segment erection for high-speed tunneling

DOT shield tunneling beneath residential districts in Nagoya City's subway construction
T. Kawamura, K. Miki, A. Takeda & T. Miki

Simulation of slurry shield behaviour during excavation at Ootsu tunnel
M. Sugimoto, A. Sramoon, K. Maeda, S. Konishi & Y. Sato

Evolution of ideas on tunnel stability during the twentieth century – three milestones from passive timber support to face reinforcement
P. Duffaut & J. Piraud

Developments of Mixshields and Hard-rock TBM
M. Herrenknecht & U. Rehm

Accident prevention measures and typical hazards occurring in driving operations with tunnel boring machines based on experience gathered during the construction of the Weser tunnel
F.-J. Gottkehaskamp

Ecological aspects of soil conditioning for EPB-TBM projects
Lars Langmaack

The New bentonite regeneration technology at the Westerschelde tunnel
Th. Neesse, H. Tiefel & J. Regler

The Genoa Underground: construction of the Principe-Caricamento-Le Grazie stretch
P. Lunardi & G. Cassani

A study on types of solidified shape of urethane grout forepoling to the softground tunnel
M. Suzuki, H. Kasa, M. Higo & K. Nakagawa

Construction and field observation of twin tunnels in sandy soil with confined water
Y. Hakoishi, T. Usui, S. Seki, H. Nagai & I. Iwamura

Cross-connections for Botlek Railway tunnel in the Netherlands
W.J. Bouwmeester, H.J.J. Jille & R. Majoor

Implementation of monitoring strategy Hermes at the Green Heart tunnel
R.J. Aartsen & G.H. Wijnants

Research and development

Influence of excess pore pressures on the stability of the tunnel face
W. Broere

Tunneling through a refilled former sandpit
H. Mortier, I.T.C. Tuunter & J.S. van der Schrier
Comparative analysis between the support of the tunnel face with foam (EPB) or bentonite (slurry-shield) in the Dutch soft ground
U. Maidl & S. Hintz

Three-dimensional finite element simulations of hydroshield tunneling
T. Kasper & G. Meschke

Design optimization of support system for swelling and squeezing zone in Gavoshan water conveyance tunnel
M. Sarraf, K. Shahriar, R. Rahman Nejad & A. Saiedi

Active earth pressure control with foam
U. Maidl & H. Cordes

On modelling of masonry buildings response in Dutch soft-ground tunnelling
M. Boonpichetvong, J.G. Rots & H. Netzel

Towards the development of a self-compensating TBM for reducing ground settlement
S. Xu, P. Grasso, V. Guglielmetti, A. Mahtab & B. Guillermou

Dynamic soil modelling for a settlement-driven TBM control system
D.J.M. Ngan-Tillard, A.S. Elkadi & G. Swinnen

Seisimics for tunnelling applications in soft soil: adapted focusing techniques
G. Swinnen, J. Thorbecke, K. Wapenaar & G.G. Drijkoningen

Application of trend line analysis for assessing change of ground condition ahead of tunnel face
J.M. Lee, J.G. Lee & S.J. Lee

High-frequency shear-wave reflections to monitor lateral variations in soil, supplementing downhole geotechnical tests
R. Ghose

Numerical evaluation of environmental impact on surrounding groundwater by tunnel excavation

Research of observational method on the groundwater in the mountain tunnels and 3-D seepage analysis

Innovative design aspects of the ITM TBM
M.W.P. van Lange, J.P.W. van Dongen, P. Wouters & L.L.J. Verdoodt

Real time thickness control of continuous extruded concrete lining (ECL) during production
L.P.M. van Velzen, A.F.A. Hartog & M.W.P. van Lange

Retrospective of tunnelling projects in the Netherlands, 1993–2003, ten years of challenges
P.S. Jovanovic & J.H. Jonker

Evaluation of extensive strain measurements in the Botlek Railway Tunnel
G.P.C. van Oosterhout, S.J. Lokhorst & N.M. Naaktgeboren

Full scale tests on a segmented tunnel lining
J.A. den Uijl, A.H.J.M. Vervaart, F.B.J. Gijsbers & C. van der Veen

The Green Heart tunnel flat joint performance of the lining
C.B.M. Blom, A.G. Kooiman, S. Lokhorst & J.J.M. Schillings

Improved grout pressure model for tunnel linings in soft soil conditions
R. Debrauwer, K.J. Bakker & R.J. Aarsen

Design philosophy of tunnel linings involving the assembling stage
C.B.M. Blom, C. van der Veen & J.C. Walraven
Confinement efficiency concept in soft ground bored tunnels
P. Aristaghes & P. Autuori

The use of steel fibers as splitting reinforcement in tunnel linings
D. Dupont, L. Vandewalle, O. Hemmy, E. Erdem & B. Schnütgen

Development of wrapping method for watertight shield tunnel construction

Development of dynamic grouting technique for the ground improvement
K. Date, S. Wakita, T. Yamamoto, Y. Nakashima, Y. Hoshino, K. Aoki & Y. Mito

Dynamic aspect at the Botlek rail tunnel
H.G. Stuit

Dynamic loading induced settlement of the “Groene Hart” Tunnel
W. Gardien, H.G. Stuit & R.J. Aartsen

Sophiaspoortunnel – tunnel technique and the development of the continuous advance method
K. Bäpler & J.H. Jonker

New development of hard rock TBM's excavation monitoring and control system and true reflective tomography

An analysis tool for real-time quantification of stress states in shotcrete tunnel linings
R. Lackner, J. Macht & H.A. Mang

Elasto-plastic analysis for the effect of longitudinal uneven settlement on shield tunnel
B. Chen & Z. Wen

Virtual Reality (VR) – based Intelligent tunneling information system
S.W. Hong, G.J. Bae, C.Y. Kim, Y.S. Seo, K.Y. Kim & J.S. Jun

Evaluation of an innovative tunneling method using TBM pilot tunnels
C.W. Lee, J.S. Yoon & S.D. Lee

Reliability of leakage detection systems in underground constructions
P.M. van Daalen, B.J. Admirral & E. Geutebrück

Comparison between two tunnel face stability calculation methods
H. Mortier, F. Renault & S. Hintz

Behaviour of electrical cables during fire in tunnels
D. van Olst & R. van den Bosch

Influence of foundation settlement on façade behaviour at Amsterdam Central Station
B.J. Schat, J.G. Rots & C.M.P. 't Hart

Review of the tensile strain method for predicting building damage due to ground movements
H. Netzel

Monitoring the deformation behaviour of buildings in Amsterdam
H.Netzel & F.J. Kaalberg

Geotechnical centrifuge tests to predict the loading conditions on a bored tunnel due to consolidation settlements
H.M.A. Pachen, H.E. Brassinga & A. Bezuijen

Grout pressure measurements during tunnelling
A. Bezuijen & A.M. Talmon

Maximum pressures in tunnelling limited by hydraulic fractures
A. Bezuijen, J.P. Pruiksma & C.J. de Pater
Design aspects and risk analysis

A new metro tunnel under Amsterdam Central Station with known risks
A.M.W. Duijvestijn & P. Bout

The relationship of risk mitigation to management and probable cost
J.J. Reilly

Risk management for the Betuweroute shield driven tunnels
S. van der Woude, U. Maidl & J.H. Jonker

The prediction of ground movements associated with the construction of deep station boxes
G. Torp-Petersen, L. Zdravkovic, D.M. Potts & H.D. St. John

Design standard for railway shotcrete tunnels in urban area in Japan

A case study on the design of two cross tunnels: Numerical analysis and reinforcement
U.H. Gu, G.W. Koo & J.S. Hwang

Design aspects and risk analyses at the example of the planning for Randstad Rail in Rotterdam
A. van Kampen & D. Handke

A GIS-based tunnelling-induced building/utility damage assessment system – development
C.S. Yoo, J.H. Kim, Y.J. Park & J.H. Yoo

Design standard for railway shield tunnels in Japan
Y. Koyama, S. Konishi, Y. Sato, N. Okano & K. Tsuno

Copenhagen Metro, segmental tunnel lining durability strategy and the supervision thereof
M. Johnson

Monitoring safety in design and construct: the HSL-South case study
J.A. Stoop & W. Beukenkamp

3D groundwater flow analysis around a tunnel using discontinuity network of rock mass
S. Bang, S. Jeon & J. Yoon

Geomechanical behaviour of frozen soil and AGF safe constraint method
R.H.B. Rijkers, G. de Lange & N.M. Naaktgeboren

The use of models in the design of deep underground metro stations in Amsterdam
J. Herbschleb & J.C.W.M. de Wit

Starting shaft of the Sophia railway tunnel
R.A. Schiphouwer

Design of parallel mutually influencing undersea and under-river tunnel linings
N.N. Fotieva, N.S. Bulychev. A.S. Sammal & I.Y. Voronina

Monitoring of world’s largest TBM at the Green Heart tunnel
I.G.H. Piet, J.M.F. Harnois & R.J. Aartsen

Effect of soil consolidation on soil-lining interaction in tunnels
A.L. Liakos, V. Nasri & M.R. Jafari

Frost heave tests on Dutch soils
G. Greeuw, B.R. Hemmen & R. Rijkers

High performance TBM technology and logistics
G. Girmscheid

Monitoring safety in design and construct: the HSL-South case study
J.A. Stoop & W. Beukenkamp

3D groundwater flow analysis around a tunnel using discontinuity network of rock mass
S. Bang, S. Jeon & J. Yoon

Geomechanical behaviour of frozen soil and AGF safe constraint method
R.H.B. Rijkers, G. de Lange & N.M. Naaktgeboren

The use of models in the design of deep underground metro stations in Amsterdam
J. Herbschleb & J.C.W.M. de Wit

Starting shaft of the Sophia railway tunnel
R.A. Schiphouwer

Design of parallel mutually influencing undersea and under-river tunnel linings
N.N. Fotieva, N.S. Bulychev, A.S. Sammal & I.Y. Voronina
Contract management and financing

Realisation of new tunnelling methods for the METRO Amsterdam Noord/Zuidlijn – the contractors' point of view
J. Schwarz, G. Behnen & F. Anthes

Public private partnership Sijtwende: turning political deadlock into public benefit
M.H. Marell, J. de Jong & F. Lous

Writing contracts to ensure safety in international tunnelling
J.M. Anderson

Allocation of soil risks in Dutch design and construct contracts
C.E.C. Jansen & P.P.M.K. Janssen

The Westerschelde tunnel: experience with financing and design and build
J. Heijboer

Accelerating to success – a target cost solution at CERN
K.M. Jones & M.C. Knights

Financing of underground infrastructure
R. Buvelot
