Computational Modelling of Concrete Structures

Edited by

N. Bicanic
University of Glasgow, UK

R. de Borst
Delft University of Technology, The Netherlands

H. Mang
Vienna University of Technology, Austria

G. Meschke
Ruhr-University Bochum, Germany
Table of Contents

Foreword XI

Computational advances and multiscale modelling

Keynote paper: Discrete vs smeared crack models for concrete fracture: bridging the gap
René de Borst, Joris J.C. Remmers, Alan Needleman, Marie-Angèle Abellan 3

Keynote paper: Models and algorithms for localized failure
Milan Jirásek 19

A new approach to strong embedded discontinuities
J. Alfaiate, A. Simone, L.J. Sluys 33

A dynamically consistent gradient model derived from a discrete microstructure: higher-order stiffness and higher-order inertia
Harm Askes, Andrei V. Metrikine, Herwald Naaktgeboren 43

A micromechanical approach to the strength criterion of composite materials
J.F. Barthélemy, L. Dormieux, E. Lemarchand 53

Computational strategies for time-dependent behaviour of ECC
W.P. Boshoff, G.P.A.G. van Zijl 59

Multiscale modelling of granular materials

Investigations on crack propagation in reinforced concrete structures
Ulrich Häussler-Combe 71

Analysis of concrete fracture using a heterogeneous continuum model
V. Mechtcherine, H.S. Müller 81

Strong discontinuity modeling of cracking in concrete
J. Oliver, E. Samaniego, E. Chaves, A. Huespe 89

A computational approach for three-dimensional probabilistic discrete cracking in concrete

Adaptive simulation of quasibrittle failure
Bořek Patzák, Milan Jirásek 109

Description of thermo-mechanical behaviour of reinforced concrete
S. Pietruszczak, A. Winnicki 119

Combined damage-plasticity models for discontinuous fracture
K. De Profi, W.P. De Wilde, G.N. Wells, L.J. Sluys 127

Combined continuous/discontinuous failure of cementitious composites
A. Simone, L.J. Sluys, P. Kabele 133

Ductility assessment of HP2C structures: from material modeling to model-based structural simulation
E. Chuang, H. Park, F.-J. Ulm 139

Modeling of static multi-cracking fracture processes in concrete
Rena C. Yu, Gonzalo Ruiz 149
Constitutive modelling

Keynote paper: Non local damage model with evolving internal length based on micromechanics  
K. Haidar, G. Pijaudier-Cabot, J.F. Dubé  
159

New results in meso-mechanical modeling of concrete using fracture-based zero-thickness interface elements  
D. Ciancio, C.M. Lopez, I. Carol, M. Cuomo  
171

Benchmarking of concrete cracking constitutive laws. MECA project  
S. Ghavamian, I. Carol  
179

Bond in finite element modelling of reinforced concrete  
V. Cervenka, J. Cervenka, L. Jendele  
189

Multiaxial stress-induced thermal strains: constitutive modelling and laboratory findings  
Roger S. Crouch, Mikhail Petkovski, Peter Waldron  
195

Bond-slip in reinforced concrete structures, constitutive modelling and finite element implementation  
N. Dominguez, F. Ragueneau, A. Ibrahimbegovic, S. Michel-Ponnelle, Sh. Ghavamian  
205

Bond-slip relationship for smooth steel reinforcement  
A.P. Fantilli, P. Vallini  
215

A coupled damage-viscoplasticity model for the analysis of localisation and size effects  
J.F. Georgin, L.J. Sluys, J.M. Reynouard  
225

Localisation of deformations in concrete subjected to compression  
P. Grassl, K. Lundgren  
231

Calibration of non local damage model with size effect law  
K. Haidar, J.F. Dubé, G. Pijaudier-Cabot  
241

Constitutive model for highly ductile fiber-reinforced cement-based composites under cyclic load  
Tong-Seok Han, Peter H. Feenstra, Sarah L. Billington  
249

Development of an inverse procedure for parameters estimates of numerical models  
C. Iacono, L.J. Sluys, J.G.M. van Mier  
259

Total-local consistency condition in a plastic-damage model for concrete  
A.D. Jefferson  
269

Regularisation behaviour of the viscoplastic consistency model  
J. Karolak, A. Winnicki  
275

A new constitutive model for concrete-steel bond behavior  
Giovanni Di Luzio, Gianluca Cusatis  
281

Scalar damage model for concrete without explicit evolution law  
J. Ozbolt, S. Ananiev  
287

Modeling of concrete response under fatigue  
T. Pfister, D. Pfanner, F. Stangenberg, Y.S. Petryna  
295

Numerical aspects of nonlocal plasticity with strain softening  
Simon Rolshoven, Milan Jirásek  
305

Study of shape properties of concrete crack surface in frequency domain  
R. Sato, M. Ueda, T. Wada  
315

Two- and three-dimensional gradient damage-plasticity simulations of cracking in concrete  
Jerzy Pamin, Adam Wosatko, Andrzej Winnicki  
325

Shear-compression modeling of cement-based material  
G.P.A.G. van Zijl  
335
Modelling of multiphysics phenomena and time effects

Keynote paper: [Bio-] Chemomechanics at finer scales – a review

Modelling of concrete deterioration by alkali-silica reaction
Falko Bangert, Detlef Kuhl, Günther Meschke

Long time behavior of concrete: creep, fracture and size effects
F. Barpi, S. Valente

Coupled moisture-carbon dioxide-calcium transfer model for carbonation of concrete
B. Bary, A. Sellier

An unified approach for the modeling of drying shrinkage and basic creep of concrete: analysis of intrinsic behaviour and structural effects
F. Benboudjema, F. Meftah, J.M. Torrenti

Material model for concrete under monotonic loading and creep
J. Bockhold, W.B. Krätzig, R. Pölling, Y. Petryna

Numerical simulation of hydrous damage in concrete: application to a structural element
F.X. Hubert, N. Burlion, J.F. Shao

Measuring and computational modeling of liquid transfer in fractured concrete
J. Carmeliet, J.-F. Delerue, K. Vandersteen, S. Roels

Drying shrinkage, creep and cracking of concrete: from coupled material modelling to multifield structural analyses
Stefan Grasberger, Günther Meschke

Micromechanics of shotcrete elasticity
Christian Hellmich, Herbert Mang

Drying of porous media: numerical and experimental approach
D. Jankovic, J.G.M. van Mier

Thermodynamics of open systems with application to chemomechanical problems
Ellen Kuhl, Paul Steinmann

Computational modeling of transport mechanisms in reactive porous media – application to calcium leaching of concrete
Detlef Kuhl, Günther Meschke

A micromechanical analysis of the observed kinetics of ASR-induced swelling in concrete
Eric Lemarchand, Luc Dormieux, Djimédo Kondo

Modelling the splitting effects of corrosion in reinforced concrete
K. Lundgren

Creep deformation of FRP-plated R/C tensile elements using solidification theory
M. Savoia, B. Ferracuti, C. Mazzotti

Modelling drying and loading effect in structural concrete repair
Laurent Molez, Yves Berthaud, Benoît Bissonnette, Denis Beaupré

A non-saturated porous medium approach for the modelling of concrete behaviour submitted to high temperatures
A. Al Najim, F. Meftah, A. Mebarki

Numerical models for coupling creep and fracture of concrete structures
M. Omar, G. Pijaudier-Cabot, A. Loukili
A transient thermal creep model for concrete
C.J. Pearce, N. Bičanić, C. Nielsen

Prestressed bridges under corrosion attack
Břetislav Teplý, David Lehký, Draho m ír Novák, Eva M. Eichinger, Johann Kollegger, Radomír Pukl, Vladimír Červenka, Mark G. Stewart

A chemo-mechanical modelling framework of concrete: coupling between calcium leaching and continuum damage mechanics
B. Nedjar, V.H. Nguyen, J.M. Torrenti

Thermal degradation in heterogeneous concrete materials
K. Willam, I. Rhee, Y. Xi

Modelling of structural performance

Keynote paper: Stochastic models for deformation and failure of quasibrittle structures: recent advances and new directions
Zdenek P. Bažant, Draho m ír Novák

Keynote paper: Regularized saw-tooth softening
J.G. Rots, S. Invernizzi

Keynote paper: Optimization of jet-grouted support in NATM tunneling
Ch. Pichler, R. Lackner, L. Martak, H.A. Mang

A note on the design of fibre-reinforced shotcrete linings for underground support
G. Barla, F. Barpi, C. Bertolino, B. Chiaia

Nonlinear local analysis of reinforced concrete plates
B. Belletti, P. Bernardi, R. Cerioni, I. Iori

On the behaviour of R/C beams without shear reinforcement
B. Belletti, P. Bernardi, R. Cerioni, I. Iori

Settlement damage modelling of historical buildings
M. Boonpichetvong, J.G. Rots

A direct stiffness technique for the analysis of concrete-steel composite beams
G. Ranzi, M.A. Bradford, B. Úy

Size effect of sandstone and concrete
Stefan L. Burtscher, Johann Kollegger

Simulation of headed anchor failure
Gianluca Cusatis, Giovanni Di Luzio, Marco Rota

Structural modeling of reinforced concrete slabs subjected to falling rock impacts
Ph. Berthet-Rambaud, Y. Timsah, L. Daudeville, J. Mazars

Predicting tunneling-induced settlement damage for a concrete frame structure with a masonry facade

Bending behaviour simulations of fibre reinforced beams with rebars by using the bridged crack model
Alberto Carpinteri, Giuseppe Ferro, Giulio Ventura

Application of a constitutive model for concrete to the analysis of a precast segmental tunnel lining
B. Winkler, G. Hofstetter, H. Lehar
From elementary tests to industrial applications: validation of a non local isotropic damage model
L. Jason, G. Pijaudier-Cabot, S. Ghavamian, A. Huerta

Modelling the behaviour of RC beams retrofitted with CARDIFRC®
B.L. Karthi aloo and F.J. Alae

Benchmarking of non-linear finite element analyses for reinforced concrete deep beams
I.M. May, C.T. Morley, Y.Y. Chen

RC structures with textile reinforcement and strengthening
F. Steinigen, B. Möller, W. Graf, A. Hoffmann

Optimisation of strut-and-tie model in deep beams with openings
J. Parsons, H. Guan

Nonlinear design procedures for reinforced concrete plates and shells
Clemens Preisinger, Rossitza Popov, Johann Kollegger

Fire resistance of SFRC thin plates
M. di Prisco, R. Felicetti, M. Colombo

Reliability assessment of concrete structures
R. Pukl, D. Novák, K. Bergmeister

Some advantages of 1D- instead of 2D- or even 3D-modelling for non-linear analysis
of reinforced concrete frames
U. Pfeiffer, U. Quast

Reliability analysis of concrete structures
A. Strauss, K. Bergmeister, U. Santa

A displacement-based formulation for steel-concrete composite beams with shear lag
F.F. Sun, O.S. Bursi

Improvement of structural behaviour in concrete shells using optimisation techniques
A. Tomás, P. Martí

Modeling of initially cracked reinforced concrete bridge decks
I.R. Pascu, F. Toutlemonde

Design of the shotcrete tunnel lining of a metro station – safety considerations
H. Walter

Modelling of seismic and cyclic behaviour

Keynote paper: Numerical modelling for earthquake engineering: the case of lightly
RC structural walls
J. Mazars, A. Colombo, P. Kotronis, N. Ile, G. Casaux, F. Ragueneau, M. Fischinger, D. Marusic

Simulation of cyclically-loaded columns made with ductile cement-based composites
S.L. Billington, J.K. Yoon

Non linear modelling of masonry infilled frames. Identification of the global
model characteristics using local modelling.
D. Combescure, P. Sollogoub, F. Vita, P. Pégon

Toward a high-quality FEM analysis of RC members subjected to reversed cyclic shear
H. Noguchi

PC members with bonded and un-bonded tendon under uniaxial cyclic load; experiment and analysis
M.R. Salamy, T. Higai, T. Yoshioka
