Advances in Water Supply Management

Edited by
Čedo Maksimović, David Butler & Fayyaz Ali Memon
Department of Civil & Environmental Engineering
Imperial College London, United Kingdom
# Table of Contents

**Preface**

**Chapter 1 – Data management**

Statistical methods for water data analysis and processing  
*H.V. Lobanova*  
Page 3

Auto-validation of district meter data  
*D. Burnell*  
Page 13

Implementation of a confidence grading system for clean water asset data  
*B. Jankovic-Nisic, I. Ledrappier & A. Bradshaw*  
Page 23

Approach for restoration of missing data, long-term time series and generalization of results  
*H.V. Lobanova & G.V. Lobanova*  
Page 31

Extracting information from urban water network malfunction records with fuzzy inference rules  
*L.S. Vamvakeridou-Lyroudia*  
Page 41

Data mining and relationship analysis of water distribution system databases for improved understanding of operations performance  
*D.M. Unwin, J.B. Boxall & A.J. Saul*  
Page 51

Analysis of district metered area (DMA) performance  
*S.L. Prescott, B. Ulanicki & N. Shipley*  
Page 59

**Chapter 2 – Leakage detection and management**

An assessment of the application of inverse transient analysis for leak detection:  
Part I – Theoretical considerations  
*Z. Kapelan, D. Savic, G.A. Walters, D. Covas, I.N. Graham & Č. Maksimović*  
Page 71

An assessment of the application of inverse transient analysis for leak detection:  
Part II – Collection and application of experimental data  
*D. Covas, N. Graham, Č. Maksimović, H. Ramos, Z. Kapelan, D. Savic & G. Walters*  
Page 79

Pipeline burst detection and location using a continuous monitoring technique  
*D. Misiunas, J. Vitkovský, G. Olsson, A.R. Simpson & M.F. Lambert*  
Page 89

Optimisation of the use of valves in a network water distribution system for leakage minimisation  
*L.S. Araujo, H.M. Ramos & S.T. Coelho*  
Page 97

Introduction of a fully dynamic representation of leakage into network modelling studies using Epanet  
*R. Burrows, G. Mulreid, M. Hayuti, J. Zhang & G.S. Crowder*  
Page 109
Estimation of distributed pressure-dependent leakage and consumer demand in water supply networks
L.S. Araujo, S.T. Coelho & H.M. Ramos

Application of integrated GIS and hydraulic models for unaccounted for water studies in water distribution systems
M. Tabesh & M.R. Delavaran

Chapter 3 – Analysis, design and rehabilitation of distribution networks

Least-cost design of water distribution networks under uncertain demand
A.V. Babayan, D.A. Savic & G.A. Walters

Robust least cost design of water distribution systems using GAs
Z. Kapelan, D. Savic & G.A. Walters

Pipe sizing using a hybrid optimisation algorithm
J. Kahler, B. Ulanicki & K. Pein

Diurnal dynamic analysis of water distribution networks
L. Ainola, T. Koppel & N. Kändler

A more realistic approach to the “extended period simulation” of water distribution networks
E. Todini

Reliability assessment of the Bekasi distribution network by the method of Cullinane
N. Trifunović & D. Umar

Head-Driven Simulation Model (HDSM) for water distribution system calibration
A.K. Soares, L.F.R. Reis & I.B. Carrijo

Entropy-based water distribution network rehabilitation
Y.B. Wu & H. Tian

Need for pressure dependent demand in analysing failure of pipe networks
M.A.M. Mansoor & K. Vairavamoorthy

Deterioration evaluation model of pipelines based on field examination survey in water distribution system

Prioritizing water mains rehabilitation under uncertainty
J.M. Yan & K. Vairavamoorthy

Chapter 4 – Network optimisation

Benchmark problems for design and optimisation of water distribution systems
R. Farmani, D.A. Savic & G.A. Walters

More choices in water system design through hybrid optimisation
E.C. Keedwell & S.T. Khu

Water distribution systems optimization by Metaheuristic Approach
S. Liberatore, G.M. Sechi & P. Zuddas

Optimisation methods for the calibration of water network systems
R. Pérez & J. Quevedo

VI
Optimal scheduling of South Staffordshire water supply system using the FINESSE package
P.L.M. Bounds, K. Ulanicka, B. Ulanicki, B. Dacre & G. Cummings

Optimal scheduling of South-Staffordshire water supply system using a spreadsheet
M. Tischer, S. Henkel, B. Ulanicki, B. Dacre & G. Cummings

Optimal rerouting to minimise residence times in water distribution networks
T.D. Prasad & G.A. Walters

A progressive mixed integer-programming method for pump scheduling
G. McCormick & R.S. Powell

Multi-objective optimization to the rehabilitation of a water distribution network
P.B. Cheung, L.F.R. Reis & I.B. Carrijo

Chapter 5 – Network operation

Security of supply for service reservoirs
G. McCormick & R.S. Powell

Simulation of mixing in axisymmetric service reservoirs with denser inflow
O. Nordblom

Coordinated control for improving water supply
P.I. Wade & R.A. Bartindale

Automatic derivation of linearised hydraulic models from Epanet
G. McCormick & R.S. Powell

Pressure control policy in water distribution networks: sector 35, Bogotá, Colombia
F.S. Contreras-Jimenez & J. Saldarriaga

Making defensible decisions in the face of uncertainty
E.J. Langman & S. De Rosa

Strategy for improving the performance of trunk main systems in water supply networks
A. Wallen, C. Ashton, C.A. Woodward & R. Powell

Chapter 6 – Water quality management in distribution networks

Water quality in distribution systems: rehabilitation and maintenance strategies

Practical conditions for the use of a first order chlorine decay model in water supply
P. Vieira & S.T. Coelho

Water quality assessment through the monitoring of trihalomethane concentration in Curitiba water distribution system
M.C.B. Braga, S.M. Braga, C.V.S. Fernandes & R.G. Marins

The effect of transient flow on chlorine decay in water supply systems
D. Loureiro, S.T. Coelho, J. Menaia, A. Lopes & H. Ramos

An early warning contaminants detection system for water distribution networks
A. Ostfeld, A. Kessler & I. Goldberg

Monitoring water quality in water supply and distribution systems
Y.A. Papadimitrakis
Chapter 7 – Effectiveness of water conservation options

Alternative water management options in a developed catchment
C. Diaper & S. Maheepala

Blackwater separation in a residential house by vacuum toilets
T. Herrmann

Modelling of water discharges for houses with conventional and low water use appliances
C.S. Lauchlan & A. Dixon

The comprehensive monitoring of a rainwater recycling system and its potential impact on future water supply demand
M. Day

Domestic greywater characterisation and its implication on treatment and reuse potential
E. Friedler & N.I. Galil

The design and operation of a grey water treatment plant
A.D. Wheatley & S. Surendran

Chapter 8 – Water economics

Setting the right water tariff for targeted standards of service
E. Cabrera, M. Dubois, R. Cobacho, E. Cabrera Jr. & V. Espert

Definition and estimation of resource costs of an aquifer
F. Dehoux

Trends in California water metering: A preliminary analysis
L.L. Dale, C.D. Whitehead & N.A. Williams

The economics of water efficient products in the household
N. Grant & D. Howarth

Developing a decision support tool for cost-effective optimum in-house water consumption
F.A. Memon & D. Butler
Paper net present value technologies for asset appraisal of existing water utilities
C.F. Chiaves

Cost analysis of alternative scenarios for drinking water supply in remote Quebec communities
A. Mailhot & J.-P. Villeneuve

The sustainability of irrigation in England and the impact of water pricing and regulation policy options

A DSS for water conservation policies impact assessment in agriculture
G.M. Bazzani

Chapter 9 – Water consumption trends and demand forecasts
Lifestyle and its effects on domestic water use
D. Burnell

Pattern of real water demand and its influence on water meters recordings
W. Koral

Stochastic prediction of the minimum night flow demand in a District Metered Area
V. Garcia, E. Cabrera, J. García-Serra, F. Arregui & J. Almandoz

Measuring microcomponents for demand forecasting
A. Ball, M. Styles, K. Stimson & M. Kowalski

Chapter 10 – Demand management – country experiences
Water demand: a UK perspective
A. McDonald, S. Bellfield & M. Fletcher

Water demand management in Syria: technical, legal and institutional issues
M. Salman & W. Mualla

Study on stratagem of developing water resources for Northwest China
L. Jianlin, H. Lingmei, S. Bing & M. Takezawa

Demand side water management in Los Angeles and San Diego: in search of sustainable water supply
C. Pezon

Urban water demand management – The city of Thessaloniki-Greece case study
Y. Mylopoulos, E. Kolokytha, A. Mentes & D. Vagiona

Drought: fighting or adopting? A report about three years experience of drought in Khorasan province (north east of Iran)
S.H. Sanaei-Nejad & H. Ansari
