Session 7B: Pipeline Installations
Steven Kramer, P.E., Jacobs Civil

Equipment Mounted Multi-Sensory System to Locate Pipes ................................................. 945
Leonhard E. Bernold, Lashminarayan Venkatesan, and Sushil Suvarna

Productivity Analysis of Auger Boring Trenchless Pipe Installation Using Simulation ................................................. 953
O. Salem, N. Galani, and M. Najafi

Trenchless Pipe Replacement with Rigid Pipe Using the Tenbusch Insertion Method™ ................................................. 964
Al Tenbusch and Albert F. Tenbusch

Session 7C: Pipeline Grouting
Dick Krzys, Trenchless Technology Magazine

Analysis and Performance of Prestressed Concrete Cylinder Pipe (PCCP) Mortar Coating ................................................. 972
Mauro Scali, Paul Scheiner, Wilkins Aquino, Rasko Ojdrovic, and Mehdi Zarghamee

Center for Innovative Grouting Materials and Technology (CIGMAT) Testing Programs for Coatings/Linings, Grouts and Pipe-Joints in Sewers ................................................. 983
C. Vipulanandan and J. Liu

Injecting Cement Grout During Horizontal Directional Drilling (HDD) Pullback ....... 997
Richard M. Stauber, Timothy A. Frame, and Matthew Kedzierski

Session 7D: Water Lines Renewal II
William E. Shook, AP/M PERMAFORM

Prioritizing Water Main Renewal Program ................................................. 1002
Arun K. Deb, Jerry K. Snyder, G.V. Loganathan, N. Agbenowski, and Frank Grablutz
Water Main Rehabilitation Using Rapid-Setting Polymeric Lining Material—Sandwich, MA
Douglas B. Gove, Jr., Peter Oram, and Daniel H. Mahoney, Jr.

Future of America's Water is in Our Hands
Jey K. Jeyapalan

Session 8A: Pipeline Design II
Lynn Osborn, Insituform Technologies

Designing a 72-Inch Water Line on an Accelerated Schedule
Alisa Gruber, Rafael Ortega, and Arthur Morris

Design of Reinforced Concrete Cylinder Pipe for the Pima-Maricopa Irrigation Project
Henry H. Bardakjian

Surge Pressure Allowance for Thrust Restraint Design of Small Diameter Water Distribution Main
David C. Shen

The Design of Non-Circular Linings
Olivier Thépot

Interactive Simulation-Based Educational Software for Management of Municipal Sewer Networks
Erez N. Allouche and L. Sammy Wong

Session 8B: Geotechnical Considerations I

Construction Methods for the Installation of Transmission Pipelines in Western China
Meng Li

Suggested Bedding Factors of Controlled Low-Strength Material for Concrete Pipe
Gerrit L. Slatter

The Development of a Simplified Equation for Deflection of Buried Pipe
Ashutosh S. Dhar

Safety Assessment of Gas Pipelines Under the Jamuna Bridge Access Road Rehabilitation
Ashutosh S. Dhar, Munaz A. Noor, Tahsin R. Hossain, Salek M. Seraj, Md. S. Hoque, and Abdul J. Khan

Impact of Deep Excavations on Adjacent Buried Pipelines
Dayong Li, Ming Xiao, and Qingjun Zeng
Session 8C: Seismic Effects on Pipelines  
Dr. Mehdi S. Zarghamee, P.E., Simpson Gumpertz & Heger Inc.

Experimental Study on Soil-Pipeline Interaction Using Expanded Polystyrene (EPS) Backfill ................................................................. 1126
  Koji Yoshizaki and Takashi Sakanoue

Some Parameters for Seismic Design and Analysis of Buried Pipelines .................. 1135
  Han Yang, Sun Shaoping, and Cui Yuping

Seismic Vulnerability Function for High-Diameter Buried Pipelines: Mexico City’s Primary Water System Case .................................................. 1145
  Omar Pineda-Porras and Mario Ordaz-Schroeder

Session 8D: Pipe Bursting/Jacking  
Dr. Sanjiv Gokhale, P.E., Vanderbilt University

The Selection of Tunneling Method and the Eventual Use of Pipe Jacking Techniques for the Installation of a Power Station Tailrace Tunnel in Machu Picchu Peru .................................................. 1155
  David G. Abbott

Ingredients for Successfully Installing Pipe Using Trenchless Methods .................. 1165
  Tennyson M. Muindi and Daniel J. Dobbels

Predicting Ground Displacements Caused by Pipe Splitting Operations ................ 1173
  David N. Chapman, Andrew H.C. Chan, Christopher D.F. Rogers, Frederick S.K. Wan, and Paul C.F. Ng

Parameters for Designing Static Pipe Bursting Operations ................................. 1184
  Ulf-Hilmar Hahn and Samuel T. Ariaratnam

Research on a Hydraulic Impact Hammer System for Pipe-Ramming ....................... 1194
  Kun Yin, Jianming Peng, Qingyan Wang, and Rusheng Wang

Session 9A: Pipeline Analysis  
Dr. Ossama Salem, University of Cincinnati

Analysis of Blast Effects on Prestressed Concrete Cylinder Pipelines (PCCP) ........... 1201
  Rasko P. Ojdrovic, Brian D. Rose, and Mehdi S. Zarghamee

Analysis of Pipeline Relocations ............................................................... 1210
  Gerald Donnelly, Christopher Antoni, Walter H. Skorupsky, and William Serra

Discrete Element Method (DEM) Analysis on Behavior of Shallowly Buried Pipe Subject to Traffic Loads ................................................. 1218
  T. Kawabata, K. Uchida, M. Ariyoshi, H. Nakase, Y. Mohri, and H.I. Ling

Numerical Evaluation of Load Capacity of Corroded Pipes .................................. 1228
  Joabson Lima Alves and Deane Roehl

xix
Session 9B: Geotechnical Considerations II
Tom Richardson, P.E., URS

Geotechnical Investigations for Trenchless Technology .................................................. 1238
Tom Richardson, Mohamed Younis, and Paul Headland

Microtunneling Challenge in Las Vegas ................................................................. 1248
Bijan Khamanian and Richard Capp

Geotechnical Risk Assessment: Estimating Slope Failure Probability ......................... 1252
Gerry Ferris, Alan Samchek, and Andy Isherwood

Tunnel Boring Machines (TBM) vs. Microtunnel Boring Machines (MTBM):
Geotechnical Considerations ..................................................................................... 1261
David C. Mathy and Robert A. Kahl

Experiments on Buried Pipe Using Backfill of Cover with Geosynthetics ............... 1271
T. Kawabata, K. Uchida, T. Hirai, Y. Mohri, H.I. Ling, and N. Koyama

Design of Buried Pipes Considering the Reciprocal Soil-Structure Interaction .......... 1279
Nelly Rubio, Deane Roehl, and Celso Romanel

Session 9C: Pipeline Materials
Mark Bruce, Can Clay Corporation

Thermoplastic Pipe Deep-Burial Project in Ohio: Initial Findings ......................... 1288
Shad M. Sargand, Teruhisa Masada, and Doug Gruver

Coefficient of Thermal Expansion Characterization for Plain Polyethylene Pipe ...... 1302
Hanakumbo Mwanang'onze, Ian D. Moore, and Mark Green

The Versatility of Ductile Iron Pipe in Trenchless Construction ............................. 1312
Ralph Carpenter and Randall C. Conner

QA/QC for Close-Fit Trenchless Pipeline Renewal ................................................. 1323
Ed Kampbell and L. Grant Whittle

Session 9D: Horizontal Directional Drilling I
John D. Hair, P.E., J. D. Hair & Associates, Inc.

Predicting and Controlling Hydraulic Fracturing During Horizontal Directional Drilling ............................................................................................................. 1334
Samuel T. Ariaratnam, Richard M. Stauber, Jason Bell, Bruce Harbin, and Frank Canon

Analysis of Theoretical Versus Actual Horizontal Directional Drilling (HDD) Pulling Loads ................................................................. 1346
Jeffrey S. Puckett

Impact of Tortuosity in Drilling and Reaming of Long Horizontal Directional Drilling (HDD) Holes in Hard Rock ..................................................... 1353
Andrew Lukas
Development of KCM130 Steerable Air-Powered Impact Mole for Directional Boring ................................................................. 1367
Jianming Peng, Kun Yin, Maosen Wang, Huiwen Xu, and Jijun Su

Session 10A: Pipeline Design III
William F. Quinn, P.E., FASCE, PLD Advisory Committee

Case Study: Using Trenchless Technologies with Conventional Methods to Construct a Sanitary Sewer Rehabilitation Improvements Project ......................... 1374
Joseph P. Castronovo and David Abbaspour

Challenges of Relocating a Wastewater Effluent Outfall on the Potomac River .......... 1384
Cynthia C. Brush, John R. Kovacs, and Gregory V. Kemp

Anyone Can Put in a Pipe! Construction of the Fresh Pond Parkway Sewer Separation and Surface Enhancements .................................................. 1391
Owen O'Riordan and Vincent W. Spada

Subaqueous Pipeline Design, Installation and Material Selection ......................... 1398
Dane R. Hancock

Session 10B: Subsurface Utility Engineering
James H. Anspach, P.G, So-deep, Inc.

Pipeline Planning Utilizing C/I ASCE 38-02 ........................................... 1406
Philip K. Ryan and James H. Anspach

Pipeline Relocation Design Utilizing C/I ASCE 38-02 ................................... 1415
Frank W. Huber, James H. Anspach, and Robin C. Persad

Subsurface Utility Engineering: A Technology-Driven Process that Results in Increased Safety, Fewer Claims, and Lower Costs ........................................ 1422
Nicholas M. Zembillas

Pipeline Damage Prevention Systems ...................................................... 1429
Hyung Seok Jeong, Dulcy M. Abraham, and Jeffrey J. Lew

Session 10C: Emerging Technologies
Dr. Mohammad Najafi, P.E., Michigan State University

A Simplified Approach for Selecting a Trenchless Construction Method for Municipal Sewers .................................................. 1438
Erez N. Allouche and Alireza Parhami

A New Qualification Concept for Sewer and Pipeline Construction Based on an Innovative, Network-Based Solution for Virtual Teaching, Learning and Working .................................................. 1449
Robert D. Stein

Document Management: Internet Based Solutions ...................................... 1459
Ned Baghdassarian
Application of Inventing Problem-Solving Theory (TRIZ) in Pipeline Technologies ................................................................. 1465
Roustem Kourmaev and Abram Teplitskiy

Session 10D: Horizontal Directional Drilling II
Vince Rybel, P.E., CH2M Hill
Water and Sewer Construction with Horizontal Directional Drilling Equipment ..... 1472
Gary Lawson
Analysis of Heave and Subsidence Risk for Horizontal Directional Drilling .......... 1481
Mathew Francis, James Kwong, and Kristi Kawamura
Kick in the Tail Saves Horizontal Directional Drilling (HDD) Shore Approaches ..... 1496
Hugh W. O'Donnell and Eric R. Skonberg
Using Ductile Iron Pipe for Horizontal Directional Drilling Installations .......... 1505
Richard W. (Dick) Rowell

Session 11A: Pipeline Planning
William F. Quinn, P.E., F.ASCE, PLD Advisory Committee
Community Relations Program Helps Neighborhood Survive
Major Construction ......................................................................................................................................................... 1509
Judith A. Kavanagh
Navigating a Large Diameter Water Main Through an Oil Field ......................... 1516
Rafael Ortega, Gregory Lentz, and Arthur Morris
An Innovative Solution Resolves Political, Inter-Governmental and Technical Constraints .................................................................. 1521
David J. Rigby, Gilbert Osei-Kwadwo, and Thomas J. McFadden
Evaluation and Planning of Trenchless Sewer Alternatives in Venezuela .......... 1532
Joseph A. Strauch
Planning, Design and Construction of Wastewater Flow Relief Facilities .......... 1542
Steven R. Henning
Pipeline Planning and Development .............................................................................................................................. 1547
James O. Ekhator, A.O. Ayanta, A.O. Ehigietor, Edwin O. Igiede,
Anthony O. Ekhator, and Brawnson O. Edionwe

Session 11B: Investigation Innovations
James Thomson, Jason Consultants
New and Effective Technology for Condition Assessment of Ferrous Pipelines
and Other Ferrous Structures ...................................................................................................................................... 1553
Martin Roubal
Innovative Inspection Methodologies for Wastewater Systems ......................... 1563
Robert S. Morrison and James C. Thomson
A Three Level Strategic Approach to Investigating and Evaluating Wastewater Networks ................................................................. 1580
Alan McCloskey

State-of-the-Art in Sensor Technologies for Pipe Inspection ......................................................... 1592
Sunil K. Sinha

Session 11C: Freight Pipelines
Dr. Henry Liu, P.E., Freight Pipeline Company

Freight Pipelines: An Overview ........................................................................................................ 1603
Henry Liu

Applicability of Pneumatic Capsule Pipeline to Radioactive Waste Disposal Facility ................................................................. 1615
Sanai Kosugi, Takeshi Fukunaga, Nobuyuki Matsui, Kazuo Saito, Koji Hane, and Kazuo Okutsu

CargoCap—Transportation of Goods Through Underground Pipelines: Research Project in Germany ................................................................. 1625
Dietrich Stein and Britta Schoesser

Linear Electric Motors for Pneumatic Capsule Pipeline Propulsion ......................................................... 1635
Robert M. O’Connell

Session 11D: Microtunneling and Tunneling I

The Use of Microtunneling Techniques for Sewer Installation in a Challenging Caribbean Environment ........................................................................................................ 1647
Peter G. Galbraith

Large Diameter Pipe Design Under Urban Constraints ........................................................................ 1657
Jennifer McNutt, Mike Middleton, Dave Bennett, Bruce Corwin, and Brett Grant

Construction Management Considerations and Techniques Used to Microtunnel a New Sewer Main Under Pacific Coast Highway for the City of Santa Monica ........................................................................................................ 1666
F.J. Schroeder, Susan Lowell, Ralph T. Eberts, Monte L. Wilson, and Chuck R. Parker

Microtunneling Beneath Historic Alexandria, Virginia ........................................................................ 1675

Session 12A: Physical Modeling
Joanne Hughes, Raven Lining Systems

Physical Modeling of Frost Jacking ...................................................................................................... 1685
D.J. Goodings and N.A. Straub

xxiii
Accelerated Creep Testing of Trenchless Liners .............................................................. Ever J. Barbero and Kevin J. Ford

Unexpected Patterns of Seepage from Underground Contaminant Leakage into Freezing Soil ................................................................. S.J. Han, D.J. Goodings, A. Torrents, and M. Zeinali

Quantitative Analysis and Comparison of Traffic Disruption Using Open-Cut and Trenchless Methods of Pipe Installation ................................... Bhavani S. Gangavarapu, Mohammad Najafi, and Ossama Salem

Session 12B: Capacity, Management, Operations, and Maintenance (CMOM) Panel Discussion

Cliff Cate, P.E., Wade & Associates, Inc.

Capacity, Management, Operations, and Maintenance (CMOM) Panel Discussion Introduction (Abstract only) ....................................................... Mark Wade

Capacity, Management, Operations, and Maintenance (CMOM) and Environmental Protection Agency (EPA) (Abstract only) .............................. Kevin DeBell

Capacity, Management, Operations, and Maintenance (CMOM) in Fairfax County, Virginia .............................................................................. Ifty Khan

Capacity, Management, Operations, and Maintenance (CMOM) and Legal Implications (Abstract only) ......................................................... Paul Calamita

How Government Regulations are Driving Pipe Renewal Efforts ......................................................................................................................... L. Grant Whittle

Summary of Water Infrastructure Legislations .................................................................................. Jill Raynor

Session 12C: Pipeline Crossings

The Abram Creek Culvert: How Burying One Mile of Stream Allowed Cleveland’s Airport to Expand .............................................................. John Aldrich, Mark Vilem, and Michael Oakland

Design and Construction of Major River Crossings in Pakistan ...................................................................................................................... Shaukat Qadeer

Guided Boring Method—Case Study ...................................................................................... Terry Fisher

Development of ASCE Manual of Practice for Auger Boring Projects .................................. Guru Kulandaivel, Mohammad Najafi, and Sanjiv Gokhale
Development of Design Options for the Installation of 10 KM of Sewer in Very Soft Lacustrian Clays
James Thomson and David G. Abbott

Houston's Hidden Tunnels: Trials and Tribulations of Large Diameter Tunnels
Rafael Ortega, Gregory J. Henry, and Hamlet Hovsepian

New Intake Tunnel Delivers Cooling Water to the Pentagon
Steven R. Kramer, Jerry Nystrom, John Woodson, and Brian T. Dziekonski

The Design and Construction of Large Diameter Pipelines in a Shaft and Tunnel System—Hong Kong Experience
Alan H.L. Man and K.Y. Mak
