ETFA 2003

VOLUME 2

September 16-19, 2003
Lisbon, Portugal

Co-sponsored by
IEEE Industrial Electronics Society
UNINOVA and Universidade Nova de Lisboa-FCT-DEE
Invited Keynote

Virtual Automation Network – problems to be solved .......................................................... 3
Peter Neumann (Germany)

SS.2 Evaluation and Development for Supply Chain Management

Supply Chain Inventory Management Based on Demand Model with Structured Uncertainties .......... 9
Yasutaka Fujimoto (Japan)
New Supply Chain Planning Method Based on Coupling Point Inventory Planning .......................... 13
Kazuhiko Mitsuishi, Yuichi Nakamura, and Toyoyuki Aoki (Japan)
Cooperative Multi-Agent-Based Control Technology for Supervisory and Data-Acquisition Systems .... 19
Juichi Kusakaya, Aki Kohiyoshi, and Katsunori Yamaoka (Japan)
The Autonomous Information System Design for Item Management Using Rewritable RF-ID Tags in Supply Chain .................................................................................................................. 27
Rei Itsuki, Hiroshi Shibata, Yoshitome Ikeda, and Norihisa Komeda (Japan)

Distributed Product Development as a Core Element of Supply Chain Management ....................... 35
Wolfgang Kersten and Eva-Maria Kern (Germany)

T1.2 Plant Automation and industrial process control

Web Technologies in Support of Virtual Manufacturing Environments ............................................. 43
Eric Larroix and Richard St-Denis (Canada)
OPC and CORBA in Manufacturing Execution Systems: A Review .................................................. 50
Paulo Marcelo P.A. Blanco, Marco A. Poli, and Marcos R. Pereira Barretto (Brazil)
Alarm Reduction in Industrial Process Control .................................................................................. 58
Tord Bergqvist, Jonas Ambuland, and Jan Erik Larsson (Sweden)
An Efficient Information Server for Advanced Plant Asset Management ......................................... 66
Jochen Muller, Ulrich Epple, Martin Wollschlaeger, and Christian Dietrich (Germany)

FIPA-ACL Based Agent Communication in Plant Automation ....................................................... 74
Qibin Feng and Guoqiang Lu (China)

T5.3 Synthesis Methodologies for Manufacturing Systems’ Controllers

New Control Policies Preventing Deadlock in Automated Manufacturing Systems .......................... 81
Guido Maione and David Nasso (Italy)
Integrating UML and the Function Block Concept for the Development of Distributed Control Applications ................................................................................................................................. 87
Christos Tranoris and Kleanthis Thrampoulidis (Greece)
Lower Bounds and Multiobjective Evolutionary Optimization for Combined Maintenance and Production Scheduling in Job Shop ...................................................................................... 95
Harrath Yousef, Chebel-Morelo Brigitte, and Zerhouni Nourredine (France)
A Pattern Schema For Complex Controllers ..................................................................................... 101
Ricardo Sanz, Adolfo Yela, and Rafael Chinchilla (Spain)

WIP.1 Communications

Design and Implementation of a Safety Communication Network in Railways with Intelligent Fault Diagnosis ................................................................................................................................. 109
Cesar Mataix, Pedro Martin, Francisco J. Rodriguez, Maria J. Mangano, Javier Pozo, and Patricio G. Donato (Spain)
Integrating Multiple Devices in Distributed Control Application Platform ........................................ 113
Hao He, R. T. Qu, Z. Q. Ding, A. Aendenrooer, and K. M. Goh (Singapore)
Powerline Communications Interface in CSMA/CA-Networks .......................................................... 117
Helmut Beikirch and Matthias Voss (Germany)
Distributed Monitoring Subsystems based on a Bluetooth Implementation ........................................ 121
Paulo Bartolomeu, Jose Fonseca, and Osvaldo Pacheco (Portugal)

An Architecture for Physical Injection of Complex Fault Scenarios in CAN Networks 125
Guillermo Rodriguez-NuÃ±ez, Jesús Jimenez, and Julián Prenza (Spain)
A Web-Enabled Distributed Control Application Platform For Industrial Automation ........................ 129
R. T. Qu, Roland Lim, H. He, Z. Q. Ding, A. Aendenrooer, and K. M. Goh (Singapore)
An Emerging Technology: Orthogonal Time Division Multiplexing (OTDM) ............................................. 133
Vicente Diaz, Daniel Hernandez, Diego Lillo, Jesus Berian, and Jesus Urria (Spain)

Supply Chain Management: Modelling Collaborative Decision ...................................................... 137
Francisco Lario Esteban, Angel Ortiz Bas, Raoul Polder Escoto, and David Perez Perales (Spain)

A Model for Agent Mobility and Interaction ............................................................................. 142
Pedro Martino, Maria Marques, Luis Correia, Rita Ribeiro, Vladimir Abramov, Jan Goosenaerts,
Maria Chi, and Philippe De Wilde (Portugal)

ERP Implementation in the Stone Industry: Special Difficulties and Solutions in the Production Area 146
Manuel Cardos Carboneras, Cristobal Miralles Insio, and Eduardo Vicens Salort (Spain)

WIP.2 Modelling and Control
Modeling and Simulation of a Complete Semiconductor Manufacturing Facility Using Petri Nets ..... 153
Matthias Becker (Germany)
Performances Evaluation of the Traffic Control in a Signal Crossroad by Petri Nets .......................... 157
Cherif Talha, Philippe Thomas, Abdelhak ElMoudni, and Dimitri Lefebvre (France)

A Combined Analytical and Knowledge Based Method for Fault Detection and Isolation .............. 161
Yousef Nakkabi, Nabil Khabbaj, Boutaib Dabbou, Gilles Roux, and J. Aguilar-Martín (France)

On-Line Fault Diagnosing Techniques for a Class of Manufacturing Equipment ........................... 165
Hui Ma, Jing Bing Zhang, Yi Zhi Zhao, Chak Hwab Tan, and Guangning Wu (Singapore)

Application of Fuzzy Sliding Mode Based on Genetic Algorithms to Control of Robotic Manipulators 169
Behzad Motahari, Mahdi Jafari-Kharazaei, and Farhad Besharati (Iran)

Intelligent Predictive Control of a Solar Power Plant with Neuro-Fuzzy Identifier and Evolutionary
Programming Optimizer ........................................................................................................... 173
Mahdi Jafari-Kharazaei and Farhad Besharati (Iran)

Supervision and Optimal Control of a Class of Industrial Processes ......................................... 177
J.L. Villa, M. Duque, A. Gauthier, and N. Rakoto-Ravalontsalama (France)

A Software Framework for Real-Time Embedded Automation and Control Systems .................. 181
Angelo Perkusich, Hygg O. Almeida, and Denis H. de Araujo (Brazil)

WIP.3 Sensors and Processes
An Alarm Reduction Application at a District Heating Plant ...................................................... 187
Jonas Abh Lund and Tord Bergquist (Sweden)

Progresses on the Design of a Surveillance System to Protect Forests from Fire ...................... 191
Joao Neves Moutinho, Fernando David Mesquita, Nuno Martins, and Rui Esteves Araujo (Portugal)

Lossless Implementation in VHDL of an Image Wavelet Transform ........................................... 195
R. Mateos, A. Gardel, A. Hernandez, I. Bravo, and C. Garcia (Spain)

Unsupervised Calibration for Tire Canvas Inspection by Means of Independent Component Analysis 199
Andre T. Puga and Julio C. Gavilan (Portugal)

TV Geometry Adjustment System .................................................................................................. 205
Jaroslav Fitt and Radek Holota (Czech Republic)

Different Proposals to the Multiplication of 3x3 Vision Mask in VHDL for FPGA’s ......................... 208
I. Bravo, A. Hernandez, A. Gardel, R. Mateos, J. L. Lizaro, and V. Diaz (Spain)

Traffic Sign Detection in Static Images Using Matlab ................................................................. 212
Miguel Angel Garcia, Migue Angel Soto, and E. Martin Goronzi (Spain)

A Phase-Measuring Method to Obtain Distances Applied to a Robot Positioning System ................ 216
E. Martin-Gorostiza, J. L. Lizaro Galicoa, J. M. Garcia Domínguez, and A. Equidázu Herrera (Spain)

A Simple On-line Batch Sequencing Algorithm ........................................................................... 220
Vladimir Jovan and Bostjan Hauptman (Slovenia)

SS.3 Emerging Approaches for Production Scheduling and Management
A High Speed Scheduling Method by Analyzing Job Flexibility and Taboo Search for a Large-Scale
Job Shop Problem with Group Constraints ................................................................................. 227
Hisatoshi Ohmae, Yoshitomo Ikkekai, Noribisa Komoda, Kunioishi Horinchi, and Hidenobu Hamamoto (Japan)

A Rapid Scheduling Method by Using Gradual Assignment for a Rectangular Cutting Stock Problem
for Flawed and Connectable Resources .................................................................................... 233
Yoji Shono, Yoshitomo Ikkekai, Noribisa Komoda, Satoshi Imai, and Hidenobu Hamamoto (Japan)

A Heuristic-Based Hybrid Solution for Parallel Machine Scheduling Problems with Earliness and
Tardiness Penalties ....................................................................................................................... 239
Hisashi Tamaki, Hajime Murao, and Shinzo Kitamura (Japan)

A Procurement Negotiation Method Using Objective Relaxation Knowledge for Appeasement ........ 245
Hironori Oka, Yoshitomo Ikkekai, and Noribisa Komoda (Japan)
T6.6 Intelligent control of mechatronic devices
Design and Verification of Mechatronic Object-Oriented Models for Industrial Control Systems .......................... 253
Marcello Bonje and Cesare Fantuzzi (Italy)
Prototyping of Distributed Control Procedures in Concurrent Cyclic Processes Systems .......................... 261
Michał Polak, Robert Wójcik, Paweł Majdzik, and Zbigniew Banaszak (Poland)
Design and Implementation of a Prototype Control System According to IEC 61499 .................................. 269
Xinjun Cai, Valeriy Vyatkin, and Hans-Michael Hanisch (Germany)
Intelligent Mechatronic Components: Control System Engineering Using an Open Distributed Architecture .................................................................................................................. 277
Valeriy Vyatkin (Germany)

T7.1 Control technologies
Direct Neuro-AVC Modelling And Control Strategy For Vibration Suppression Of A Flexible Plate Structure .................................................................................................................................. 287
Intan Z. Mat Darus and M. O. Tokhi (United Kingdom)
Sliding Mode Traction Control of an Electric Vehicle with Four Separate Wheel Drives .................. 291
Mahdi Jalili-Kharaajoo and Farhad Berbarati (Iran)
Petri Net-Based Automated Control Synthesis for a Class of DEDS .................................................. 297
Frantisek Šapko and Peter Šapko (Czech Republic)
A New Robust Iterative Learning Control Algorithm for Application on a Gantry Robot ............. 305
J.J. Hatonen, T.J. Harte, D.H. Owens, J.D. Rattcliffe, P.L. Lewin, and E. Rogers (United Kingdom)

T6.5 Formal methods in Automation - Application
Formal Design and Verifying of FMS ............................................................................................................ 315
Xu Gang and Wu Zhiming (China)
Modular Modeling of Roll-Based Calender Manufacturing Environments ...................................... 321
Oliver Gutzeit and H.-M. Hanisch (Germany)
Methodology for Modeling Visual Flowchart Control Programs Using Net Condition/Event Systems Formalism in Distributed Environments .............................................................................. 329
Andrei Lobov, Jose L. Martinez Latre, Reijo Taokko, and Valeriy Vyatkin (Finland)
Automatic Generation of PLC Programs for Control of Flexible Manufacturing Cells ............. 337
Johan Richardson and Martin Fabian (Sweden)

T7.3 Distributed AI
A Bridge Crane Advanced Control System Implemented by Means of a Distributed Expert System ... 347
Juan V. Capella, Alberto Bonastre, and Rafael Ori (Spain)
Contributions to Adaptable Agents Societies ...................................................................................... 354
M. Simões-Marques, Pedro Mariano, Rita Reiveiro, Luis Correia, Maria Chli, Philippe De Wilde, Vladimir Abramov, and Jan Goosenaerts (Portugal)
Applying Non-Ideal Mixed Analog-Digital Multipliers in Electronic Processing Circuits Based on Neural Networks ............................................................................................................... 362
Carlos Lajusticia, Nicolas Medrano, Guillermo Zatorre, and Bonifacio Martin (Spain)
Organ-Matrix and Cell-Matrix .............................................................................................................. 368
Arnold Sher (Canada)

T8.3 Robotics & control
An Experimental Testbed for Visual Servo Control of Robotic Manipulators .............................. 377
P.J. Sequira Gonzales and J.R. Caldas Pinto (Portugal)
A Service Robot for Automating the Sample Management in Biotechnological Cell Cultivations 383
Torsten Scherer, Iris Poggendorf, Axel Schneider, Daniel Westhoff, Jianwei Zhang, Dirk Lehmann, and Alois Knoll (Germany)
Research on Individual Wheel Drive and Control of Mobile Robot at Bent Pipeline ...................... 391
Xinhua Zhang and Hongjun Chen (China)
Robust Analysis of a Genetic Algorithm Based Optimization Method for Real-Time Iterative Learning Control Applications .................................................................................................................. 396
Vasilis E Hatzikos, Jari Hatonen, Tom Harte, and David H Owens (United Kingdom)

T9.2 Remote Management Issues in Manufacturing
Infrastructures for Virtual Organizations – Where We Are .............................................................. 405
Luis M. Camarinha-Matos (Portugal)
PROTEUS – a European Initiative for E-Maintenance Platform Development 415
Jacek Szymanski, Thomas Baygernann, Marie Thron, Jean-Pierre Thomesse, Xavier Reboeuf, Christophe Lang, and Eric Garcia (France)
A Multi-Agent Based Platform for Virtual Communities in Elderly Care .................................................. 421
Luis M. Camarinha-Matos, Octavio Castolo, and João Rosas (Portugal)

T3.3 Design Aspects of RT embedded systems
On Structuring Mechanisms for Petri Nets Based System Design .................................................. 431
Luis Gomes and João Paulo Barros (Portugal)
Domain and Type Enforcement for Real-Time Operating Systems .................................................. 439
Jan Kisaka and Bernardo Wagner (Germany)
A Java-Based Framework for Real-Time Control Systems .............................................................. 447
Alexander Blum, Vaclav Cechticky, Alessandro Paletti, and Walter Schoofsberger (Switzerland)
Feedback Scheduling for Real-Time Control of Systems with Communication Delays ......................... 454
O. Sename, D. Simon, and D. Robert (France)
Synthetic Generation of Address-Events for Real-Time Image Processing .......................................... 462
A Linaras-Barranco, R. Senhadj-Navarro, I. Garcia-Vargas, F. Gómez-Rodriguez, G. Jiménez, and A. Cist (Spain)

T4.2 Modelling, design and validation of Intelligent Sensors
Creating an Abstraction of Sensors to Ease Usage, Distribution and Management of a Measurement Network ................................................................. 471
P. Marino, C. Sigüenza, F. Pozo, F. Vázquez, and F. Machado (Spain)
Relative Stereo Method for 3-D Measurement in Production Lines .................................................. 479
Seiji Hata, Daisuke Shima, and Ken’ichi Kaido (Japan)
Dependability Aspects in Capacitive Angular Measurement Systems ............................................... 483
Thilo Sauer, Herbert Nachtmelb, and Nikolaus Kerö (Austria)
Electronic Retina Based Vision System .............................................................................................. 490
Yang Ni (France)

T6.7 Methodologies, tools and solutions
Plug & Play Methodologies for Inter-Level, Enterprise Logistics and Control ........................................ 501
Mohsen A. Jafari, Thomas O. Bouche, and Hans-Michael Hamisch (Germany)
Factory Management and Transport Automation ................................................................................. 508
Marta Mon, Verónica Suecia, Leopoldo Armesto, and Josep Tornier (Spain)
A Reference Architecture and Functional Model for Monitoring and Diagnosis of Large Automated Systems ............................................................................ 516
Dan Hong Zhang, Jing Bing Zhang, Ming Luo, Yue Ting, and Ji Qun Zhang (Singapore)
An Interactive Environment For Simulation And Control Of Flexible Manipulator Systems .................. 524
A. K. M. Azad and M. O. Tokhi (USA)
Automation of Flow Injection Methods in the Winery Industry Through a Computer Program Based on a Multiplayer Model .............................................................................. 530
Manuel Urban Cuadrado, M. D. Luque De Castro, and Miguel Angel Gómez Nieto (Spain)

T8.1 Computer vision
Real Time Video Image Processing for Teleoperation: Image Blending and Stereoscopy ......................... 539
Manuel Ferre, Rafael Aracil, Manuel Navas, and Juan A. Escalera (Spain)
A Distributed Real Time Eye-Gaze Tracking System .............................................................................. 545
A. Garcia, F.M. Sánchez, A. Pérez, J.L. Pedraza, R. Méndez, M.L. Córdoba, and M.L. Munoz (Spain)
On-line Wavy Strip and Off-Center Analysis of High Speed Production Lines by a Linear Camera ........ 552
Yolanda Fernández, Rafael C. González, Pablo F. Díaz, and José M. Enguita (Spain)
Dynamic Visual Servoing of Robotic Manipulators .............................................................................. 560
P. J. Sequeira Goncalves and J.R. Caldas Pinto (Portugal)
Camera Auto-Calibration with Virtual Patterns ..................................................................................... 566
A. Gardel, J. L. Lázaro, and J. M. Lavest (Spain)

T9.1 Manufacturing Management Systems
A Distributed Decision Support System for Operational Units Application to a Manufacturing Unit .. 575
Christine Gertosio and Alain Dussachy (France)
Integrated Scheduling of Warehouse and Transportation: How? ...................................................... 582
Sok Hain Tong and Henrique O’Neill (Portugal)
Power Network Management in Software .............................................................................................. 588
Tuivo Kangiakesi (Estonia)
Intelligent Manufacturing Database Techniques for Quality and Process Design of Steel Plate ....... 596
Toshihiko Watambe, Akira Kitamura, Koichi Higuchi, and Hideji Ikeda (Japan)

VIII
T2.4 Remote Access / Middleware
Implications of Power-line Communication on Distributed Data Acquisition and Control Systems .......................... 607
Maxim Lobashov, Gerhard Pratl, and Thilo Sauter (Austria)

Object-Oriented Based Architecture for Accessing Remotely Protection Relays .............................................. 614
Isidro Calvo, Alberto Huidobro, Marga Marcos, and Dario Orive (Spain)

Component-Based Industrial Messaging Service Design for Utilities ........................................................................ 622
Erwan Becquet, Hans-Nikolai Locher, and Eric Greuser (France)

Communication System Architecture to Manage a Containers Terminal ............................................................... 629
José L. Pozo, Juan L. Posadas, José E. Simó, and A. Crespo (Spain)

Implementation Requirements for Web-Enabled Appliances – a Case Study ............................................................ 636
Christian Eckel, Georg Gaderer, and Thilo Sauter (Austria)

T3.4 Distributed Real-Time Systems
A Test-Bed for Time-Sensitive Agents – Some Involved Problems .................................................................... 645
Leo Motus, Merik Merrit, Tonis Keldur, Juri Helekini, and Vadim Kimlayeluk (Estonia)

Using a Flexible Real-Time Scheduling Strategy in a Distributed Embedded Application ..................................... 652
Leandro B. Becker, Martin Gergelot, Stefan Scheun, and Edgar Nett (Brazil)

On the Suitability of the RT-UML Profile for Modeling Distributed Real-Time Systems ...................................... 658
L. B. Becker and C. E. Pereira (Brazil)

An Experiment in Distributed Objects for Real-time Process Control ................................................................. 664
R. Song, S. Galan, M. Rodriguez, C. Garcia, R. Chinchilla, and A. Yela (Spain)

COSMIC: A Middleware for Event-Based Interaction on CAN ........................................................................... 669
Jörg Kaiser, Carlos Mitidier, Cristian Brodina, and Carlo Eduardo Pereira (Germany)

T4.3 Applications with Intelligent Sensors
Monitoring Gas Metal Arc Welding in Real-Time: a Fuzzy Logic Approach ......................................................... 679
David Naso, Biagio Turchiano, and Paolo Pantaleo (Italy)

Use of Coded Signals to Wheel Train Detection .................................................................................................... 685
Patricio Donato, Jesús Ureña, Juan Jesús García, Manuel Mazó, and Álvaro Hernández (Spain)

Three-Dimensional Discrimination Between Planes, Corners and Edges Using Ultrasonics Sensors ............ 692
José A. Jiménez, Jesús Ureña, Manuel Mazó, Álvaro Hernández, and Enrique Santiso (Spain)

Advanced Sonar Module for Mapping Applications ................................................................................................. 700
Álvaro Hernández, Jesús Ureña, Manuel Mazó, Juan J. García, José A. Jiménez, and Fernando J. Álvarez (Spain)

A Biomedical Wearable Device for Remote Monitoring of Physiological Signals ................................................. 708
Claudionor J. N. Coelho Jr., Antonio O. Fernandes, Julio C. D. Conway, Fabio L. Correa Jr., Hervaldo S. Carvalho, and José M. Mata (Brazil)

T6.1 Modelling and analysis of complex processes and systems
Modeling Micro-turbines on the Distribution System Using Identification Algorithms ....................................... 717
Antonio Camo and Francisco Jurado (Spain)

An Automated Procedure for Non-Contact Strain Analysis of Sheet Metal Parts ................................................. 724
Eusebio Carasssán and Fernando Canal (Spain)

Performance Evaluation of Automation Systems for the Real Time Control of Blowing Machines ................ 732
Stefano Viutini (Italy)

Fault Diagnosis Based on Black-Box Models with Application to a Liquid-Level System ................................ 739
L.B. Palma, F.V. Coito, and R.N. Silva (Portugal)

Fault Detection and Isolation in a Greenhouse Using Parity Relations ................................................................. 747
N. Kabbaj, M. Ramzi, B. Dabhou, H. Youdal, and G. Enna (France)

T7.2 Fuzzy models
Multi-Agent Fuzzy Control of Operation Dispatching in Flexible Manufacturing Environments ....................... 755
Guido Maione and David Naso (Italy)

A Visual Approach for Fuzzy Rule Induction .......................................................................................................... 761
Sergio R. Cuesta, Ignacio Díaz, Abel A. Cuadrado, and Alberto B. Díez (Spain)

Fuzzy Model-Based Fault Detection and Isolation .................................................................................................... 768
L.F. Mendonça, J.M. Sousa, and J.M.G. Sé da Costa (Portugal)

Evolved Genetic Algorithms with Fuzzy Aggregation Applied to Priorities in Logistic Systems ....................... 775
C.A Silva, J.M. Sousa, T. Runkler, and J.M.G. Sé da Costa (Germany)

Multivariate Time Series Forecasting Using Independent Component Analysis ............................................... 782
Theodor D. Popescu (Romania)

Author Index ................................................................................................................................................. 791
