26th JANNAF
AIRBREATHING PROPULSION
SUBCOMMITTEE
MEETING

VOLUME I

Bayside Inn @ The Sandestin Resort
Eglin Air Force Base
Destin, Florida

8-12 April 2002

CHEMICAL PROPULSION INFORMATION AGENCY

- THE JOHNS HOPKINS UNIVERSITY -
- WHITING SCHOOL OF ENGINEERING - COLUMBIA, MARYLAND 21004-3204 -
CONTENTS

Preface ........................................................................................................................................ iii

MODELING AND SIMULATION OF COMPLEX
HYDROCARBON FUELS AND UNSTEADY PROCESSES

Multi-Domain Spectral Simulations of Supersonic Reactive Flows in
Recessed Cavity Flame-Holders ..................................................................................................... 1
W. S. Don, D. Gottlieb, and J.-H. Jung, Brown University, Providence, RI

Direct Calculation of High-Speed Cavity Flows in a Scramjet Engine by
the CESE Method ......................................................................................................................... 11
S.-T. J. Yu and C.-K. Kim, Wayne State University, Detroit, MI

Development and Validation of a Detailed JP-8 Fuel Chemistry Model ......................... 21
M. A. Mawid and T. W. Park, Engineering Research and Analysis Company,
Dayton, OH, and B. Sekar and C. Arana, Air Force Research Laboratory,
Wright-Patterson Air Force Base, OH

ACTIVELY COOLED ENGINE STRUCTURES

High Temperature Composite Heat Exchangers .................................................................. 39
A. J. Eckel and M. H. Jaskowiak, NASA Glenn Research Center, Cleveland,
OH

TACTICAL PROPULSION

Evaluation of High-Mach Turbine Engines for Missile Applications .......................... 43
J. R. Kretzing and C. D. Snyder, Naval Air Systems Command, Patuxent
River, MD

Development of the NAVSEA/Alliant Techsystems Tactical Airbreathing
Propulsion, Integral-Rocket/Ramjet-Engine Test Facility .................................................. 57
Systems Company, Rocket Center, WV, and A. Castrogiovanni and J. P.
Lugbauer, Allied Aerospace Industries, Incorporated, Ronkonkoma, NY

SCRAMJET PROGRAM OVERVIEW--I

The National Hypersonic Science and Technology Planning Report .......................... 69
P. G. Carrick, Office of the Deputy Assistant Secretary of the Air Force,
Washington, DC
NASA's Hypersonic Investment Area

Performance Validation Approach for the GTX Airbreathing Launch Vehicle

C. J. Trefny and J. M. Roche, NASA Glenn Research Center, Cleveland, OH

Design Evolution and Performance Characterization of the GTX Airbreathing Launch Vehicle Inlet

Status of the RBCC Direct-Connect Mixer Combustor Experiment

Three Dimensional CFD Analysis of the GTX Combustor

C. J. Steffen, NASA Glenn Research Center, Cleveland, OH, and R. B. Bond and J. R. Edwards, North Carolina State University, Raleigh, NC

Summary of Test Medium Working Group Workshop I

W. Chinitz, Allied Aerospace Industries, Incorporated, Ronkonkoma, NY

Technology Assessments within NASA's Integrated Technology Assessment Center

Worldwide Developments in Ramjet-Powered Missiles

P. W. Hewitt, Atlantic Research Corporation, Gainesville, VA
SPACE ACCESS TECHNOLOGY

Analysis of the Magneto-Hydrodynamic (MHD) Energy Bypass Engine for High-Speed Airbreathing Propulsion ................................................................. 177
D. W. Riggins, University of Missouri, Rolla, MO

Comparison of Engine Cycle Codes for Rocket-based Combined Cycle Engines ....................................................................................................................... 209
P. J. Waltrup, The Johns Hopkins University, Applied Physics Laboratory, Laurel, MD; A. H. Auslender, NASA Langley Research Center, Hampton, VA; J. E. Bradford, Georgia Institute of Technology, Atlanta, GA; L. R. Carreiro, Air Force Research Laboratory, Eglin Air Force Base, FL; C. D. Gettinger, Pratt and Whitney, West Palm Beach, FL; D. R. Komar and J. McDonald, NASA Marshall Space Flight Center, Marshall Space Flight, Center, AL; and C. A. Snyder, NASA Glenn Research Center, Cleveland, OH

Space Transportation and the Computer Industry—Learning from the Past ........ 233
M. L. Merriam and D. Rasky, NASA Ames Research Center, Moffett Field, CA

Cost Per Pound from Orbit .................................................................................. 245
M. L. Merriam, NASA Ames Research Center, Moffett Field, CA

* * * * *

COMPONENT MODELING AND SIMULATION

Development of a Turbofan Engine Simulation in a Graphical Simulation Environment ................................................................................................................ 249
K. I. Parker and T.-H. Guo, NASA Glenn Research Center, Cleveland, OH

A Modified Wall Matching Treatment to Account for Local Solid to Fluid Thermal Coupling ........................................................................................................... 259
J. A. White, NASA Langley Research Center, Hampton, VA

* * * * *

NASA GTX STATUS--II

Integrated Nozzle Design for the GTX RBCC Flowpath ....................................... 271
T. D. Smith and S. Yungster, NASA Glenn Research Center, Cleveland, OH; B. J. Blaha, Ohio Aerospace Institute, Cleveland, OH; and T. Rice, The Johns Hopkins University, Applied Physics Laboratory, Laurel, MD

Modes 1 and 4 Testing of an Axisymmetric GTX RBCC Engine .......................... 281
T. Rice, The Johns Hopkins University, Applied Physics Laboratory, Laurel, MD, and T. D. Smith, NASA Glenn Research Center, Cleveland, OH
NASA GTX STATUS—II (CONT.)

GTX Reference Vehicle Structural Verification Methods and Weight
Summary .................................................................................................................. 291
J. E. Hunter and P. W. Dunn, NASA Glenn Research Center, Cleveland, 
OH, and D. R. McCurdy, QSS Group, Incorporated, Cleveland, OH

SRM-Assisted Trajectory for the GTX Reference Vehicle ........................................ 305
J. P. Riehl and C. Trefny, NASA Glenn Research Center, Cleveland, OH, 
and D. N. Kosareo, ZIN Technologies, Incorporated, Cleveland, OH

Affordable Flight Demonstration of the GTX Airbreathing SSTO
Vehicle Concept ........................................................................................................ 321
T. M. Krivanek, J. M. Roche, and J. P. Riehl, NASA Glenn Research Center, 
Cleveland, OH, and D. N. Kosareo, ZIN Technologies, Incorporated, Cleveland, 
OH

* * * * *

PDE TECHNOLOGY

Airbreathing Pulse Detonation Engine Performance ............................................. 337
L. A. Povinelli and S. Yungster, NASA Glenn Research Center, Cleveland, 
OH

Progress in the Development of a Nozzle Design Methodology for Pulsed 
Detonation Engines ................................................................................................... 351
University, Applied Physics Laboratory, Laurel, MD

Attendance List ....................................................................................................... 365

Author Index ........................................................................................................... 369

Source Index ............................................................................................................ 371

Initial Distribution .................................................................................................. 375
