NONLINEAR DYNAMICS, CHAOS, CONTROL, AND THEIR APPLICATIONS TO ENGINEERING SCIENCES

Volume 1

José Manoel Balthazar
Dean T. Mook
João Maurício Rosário

Editors

1997
Chapter 1

Applied Dynamics and Nonlinear Dynamics.

Contents

• Can Practicing Engineers Afford to be Ignorant of Nonlinear Phenomena?

• Long Term Dynamics of MDOF Systems with Local Nonlinearities

• The Mechanics of Escape in a Structural System Liable to Asymmetric Bifurcation

• Synchronous Machine Dynamics Stability Frontiers

• Analytical Approach to Aeolian Vibrations of Bundled Conductors

• Symbolic Language Manipulation of a Stokes Second Problem of a Couette Flow
  A.M. Aquino, L. Sinay, L.R. Carrocci: 29-32.

• Rollover Stability Analysis of Three and Four Wheel Vehicles

• Multidimensional Nested Method With Different Numerical Algorithms for Simulating
  Tidal Currents

• Field Modeling in Active Magnetic Bearings
  R.F. de Noronha, M. F. Bessa: 45-49.

• Model Based Diagnosis of Rotor Systems in Power Plants - A Research Program
  Funded by the European Community

• Non-Linearities in Hidrodynamic Bearings

• Analysis of a Nonlinear Oscillator Via the Orthonormal Wavelet Transform

• A Parametric Method Applied to the Signal Analysis of a Cracked Beam
  M.H. Mathias, P.R.G. Kurka and J.A. Brandon: 68-72.

• Mode Localization in Planar Framed Structures of Geometrically Nonlinear Behavior
- Soil Displacement Field Caused by a Rigid Surface Foundation Harmonically Excited
  E. Romanini and E. de Mesquita Neto: 79-84.

- Models of Biological Rhythms

- Some Remarks On The Behaviour of a Non-ideal Dynamical System

- Some Observations on Numerical Simulations Of The Non-Linear non-Ideal Problem

- A Study of the Non-Linear Dynamic Response of Shallow Spherical Shells
  P. B. Gonçalves: 105-110.

- Tire Models and Their Influence on Vehicle Lateral Stability
Chapter 2

Chaotic Phenomena

Contents

- Hopf Bifurcation and Scale Law in a Dripping Faucet

- Phase-Locking in High Dimensionality: The Zakharov Equations

- Chaos in Cyclotron Resonance Accelerators

- Nonintegrable Three Wave Interaction

- Onset of Chaotic Attractors on Third Order PLLS

- On the Detection of Conservative Chaos in na Experimental Oscillator
  R.Barboza and V.A.de Oliveira: 142-147.

- Controlling Chaos in the Ikeda Map

- Co Oxidation Over PT: Stable, Oscillatory and Quasi-Chaotic Regimes

- The Evolution of a Family of Synchronus Orbits in The Earth-Moon System
  O.C.Winter: 159-163.

- A Simple Program to Delineate Strange Attractors in Dynamical Systems
  M.C.Ricci: 164-168.

- Exponents of Lyapunov by the Eckmann-Ruelle Algorithm

- Using Fractal Dimension to Identify Texture Variation

- Coupled Map Lattices and Kicked Nonlinear Oscillators

- Convection and Diffusion Influence in Lorenz Equation Behavior

- Dynamical Analysis of the Chaotic Trajectories in a Bidimensional Symplectic Mapping
• Symbolic Dynamics Analysis on the Dripping Faucet Experiment  
• Simulating Diffusion in Tokomaks by Using Divertor Maps  
  G. Corso and I. L. Caldas: 201-205.
• High Dimensional Wave-particle Chaos in a Cyclotron-Maser System  
  R. Pakter, F. Couto and F. B. Rizzato: 206-211.
• Characteristic Periods in the Attactors of a Leaky Faucet Experiment  
• The Driven Matsumoto’s Circuit Control and Characteristic Oscillations  
  M.S. Baptista and I. L. Caldas: 218-222.
• Combined Maps in a Leaky-Fauced Experiment  
• Behavior of the Stochastic Layer During Reconnection  
• Reconnection Process in Low Energy Accelerator  
• Control and Optimization of the Chaotic Nonlinear Three-Wave Coupling  
• A Short Note on a “D.C. Motor - Pendulum”  
Chapter 3

Control, Robotics, Neural Networks and Optimization Engineering

Contents

- On Mathematical Modeling and Control of Nonlinear Dynamic System and na Application on Robotics Systems
- Fractional-order Digital Control of Non-Linear Systems
  J. A. Tenreiro Machado: 253-258.
- Consideration of the Generation of Irregular Waves Specified by its Spectrum
- Recurrent Multi-Layer Perceptron in Optimization of a Hydroelectric Potential System
  L. Martinez and R. Francelin: 265-270.
- Modeling, Simulation and Control of Human Postural Dynamics with Induced Oscillatory Motion
- Study on Rugged Landscapes
- The Dual Adaptative Control of Stochastic Nonlinear Systems
  J.L.Larangeira: 278-283.
- Approximate Controllability for the Semilinear Reaction-Diffusion Equation with Internal Lumped Controls
- Variable Structure Control of Manipulators with Joints having Flexibilility and Backlash
- Adaptative Control using Updated Models
- Application on Fuzzi Logic on Motion Control Systems in Machine Tools
  H. B. Lacerda and E. M. Belo: 301-305.
- Flight Dynamics at INPE
- Modal Analysis of a Multibody System with Flexible Appendages
• Implementation of Numerical Algorithms for the Resolution of the Kinematic Inverse Problem in Robot Manipulators
• Optimal Control with Bank Angle variation for Atmospheric Reentry
• Experimental Dynamic Validation of a Flexible One-Link Arm
• Dynamic Simulation of Nonrigid Link Manipulators
• A Brazilian Project on Aeroservoelasticity - Preliminary Plan
  M. P. Brandão: 337-342.
• Optimization of Dynamic System: The Minimum Vibration Problem
• Recurrent Neural Networks for Chaotic Time Series Prediction
• Modelling, Simulation and Control of Flexible Robots
• Livenberg - Marquardt Versus Conjugate Gradient Algorithms for Multilayer Feed-Forward Neural Networks: Na Aplication for Invariant Visual Pattern Recognition
• Optimization Techniques for Off-Line Trajectories Planning of Robot Manipulators
  V. Steffen and S. F. P. Saramago: 363-368.
• Robustness Stability of a Nonlinear Control Scheme Application with The State Model Based GPC
