PROCEEDINGS OF THE
19TH WINTER WORKSHOP ON
NUCLEAR DYNAMICS

February 8–15, 2003
Breckenridge, Colorado, USA
Contents

Editors’ Preface
Wolfgang Bauer, Rene Bellwied, John Harris and Gary Westfall ....................... ix

Global Observables at PHENIX
Alexander Bazilevsky, Brookhaven National Laboratory ............................... 1

Recent Results from PHOBOS
Edmundo García, University of Illinois at Chicago ....................................... 7

The Naive Parton Model and BRAHMS Measurements
Ramiro Debbe, Brookhaven National Laboratory .......................................... 17

An Interpretation of Saturation Phenomena as Glauber–Gribov Multiple Parton
Scatterings
Alberto Accardi, Columbia University .................................................. 25

Proton and Antiproton Distributions at RHIC
Flemming Videbæk, Brookhaven National Laboratory ................................... 31

Transverse Momenta of High-\eta Charged Particles Emitted in Au+Au Collisions
Birger Back, Argonne National Laboratory ............................................ 37

Characteristics of Charged Particle Production in Relativistic Heavy-Ion Collisions
Thomas Ullrich, Brookhaven National Laboratory ...................................... 43

Particle Ratios from a Chiral SU(3) Model
Kerstin Paech, J.W. Goethe Universität, Frankfurt ..................................... 51

Study of A+A Collisions in NA49 at the CERN SPS
Peter Seyboth, Max-Planck-Institut für Physik, Munich ................................. 57

Hadrons in Nuclei
Ulrich Mosel, Universität Giessen .......................................................... 63

Resonance Production in STAR
Christina Markert, Yale University .......................................................... 71

Mid-Rapidity \( \phi \) Meson Production at \( \sqrt{s_{NN}} = 200 \text{ GeV} \) Au+Au and pp Collisions
from STAR
Jingguo Ma, University of California, Los Angeles ...................................... 79

Freezeout of Resonances and Nuclear Fragments at RHIC
Edward Shuryak, SUNY at Stony Brook .................................................. 85

Analysis of Multi-Strange Hyperon Production in p+p and Au+Au Collisions
at RHIC
Anja Billmeier, Wayne State University .................................................... 91

Strange Particle Production at the Intersection of Soft and Hard Processes at RHIC
Rene Bellwied, Wayne State University .................................................... 97

Strangeness Saturation: Dependence on System-Size, Centrality and Energy
Burkhard Kämpfer, Forschungszentrum Rossendorf .................................... 103

Charged Hadron Suppression in Au+Au Collisions at High \( p_T \) from STAR
James C. Dunlop, Yale University and BNL .............................................. 109

ISBN 963 210 625 3
