# PES Transmission & Distribution 2003
## Table of Contents

Experience with a Dynamic Voltage Restorer for a Critical Manufacturing Facility
Roger Affolter and Bill Connell ................................................................. 937

Experience with Custom Power Applications for Critical Manufacturing Facilities
Timothy Wood ........................................... 940

The Economics of Custom Power
Mark McGranaghan and William Roettger ............................................. 944

### Panels-02 - FACTS Fundamentals

How FACTS Controllers Can Benefit AC Transmission Systems
John Paserba ................................................................. 949

How FACTS Controllers Function in an AC Transmission System
Dennis Woodford ......................................................... 957

How FACTS Controllers Function in an AC Transmission System: Series and Combined Multiterminal Controllers
Brian Johnson ............................................................. 959

### Panels-03 - Enhancing Energy Industry Efficiency and Effectiveness using an Enterprise Asset Management Discipline

What does Asset Management Mean To You?
Mehrdad Mohseni ............................................................. 962

Using Knowledge Management to Enable Enterprise Asset Management at Conectiv
Joe LoPorto and Victor Udo ......................................................... 965

Utilities as Asset Managers
Greg Welch ............................................................. 968

### Panels-04 - Advanced Topics in Distribution System Analysis

Lee King ................................................................. 970

A Fast Approach of Monte Carlo Simulation Based on Linear Contribution Factors to Distribution Reliability Indices
Fangxing Li ............................................................. 973

The Computation of Neutral and Dirt Currents and Power Losses
Bill Kersting ............................................................. 978

Calculating Short-Circuit Currents in Distribution Systems Via Numerically Computed Thevenin Equivalents
Robert Broadwater, Murat Dilek and Richard Sequin ........................................... 984

### Panels-05 - FACTS Fundamentals

How FACTS Controllers Benefit AC Transmission Systems
John Paserba ............................................................. 991

How FACTS Controllers Function in an AC Transmission System
Dennis Woodford ............................................................. 999

How FACTS Controllers Function in an AC Transmission System: Series and Combined Multiterminal Controllers
Brian Johnson ............................................................. 1001
# Table of Contents

## Panels-06 - Uprating and Upgrading of Overhead Lines, Underground Cables and Transformers

- Increasing Power Transfer Capability of Existing Transmission Lines  
  Jose Daconti and Daniel C. Lawry ................................................................. 1004
- Underground Cable Uprating and Upgrading Tutorial  
  Earle C. Bascom III ....................................................................................... 1010
- Power Transformer Thermal Ratings - An Overview  
  Timothy Raymond .......................................................................................... 1017

## Panels-07 - Component Modeling for Distribution System Analysis

- Transformer Model Test System  
  Bill Kersting .................................................................................................. 1022
- Computer Models of Internal Short Circuit and Incipient Faults in Transformers  
  Karen Butler-Purry and Hang Wang .............................................................. 1027
- An Example of 3-phase Transformer Modeling for Distribution System Analysis  
  Roger Dugan and Surya Santoso .................................................................. 1028
- Transformer Modeling Using Line-to-Line Voltages in Ungrounded Power Distribution Networks  
  Karen Miu, Ray Zimmerman and Hsiao-Dong Chiang .............................. 1033

## Panels-08 - Market-Based Transmission Expansion and Planning: HVDC, FACTS and Advanced Solutions

- Market-Based Transmission: Property Rights Meet Kirchhoff  
  Ross Baldick .................................................................................................. 1037
- Market-Based Transmission Expansion and Regional Planning: An Idea Whose Time Has Come  
  Laura Manz ..................................................................................................... 1040
- Independent Transmission Companies: The Key to Capital Formation for Electric Transmission in North America  
  Frederick Buckman ......................................................................................... 1042
- Tools for Optimal Network Control - HVDC and FACTS  
  Bjarne Andersen, Brian Gemmell and Neil Kirby ......................................... 1045
  John Howe .................................................................................................. 1051

## Panels-09 - Implementing Large Scale PQ Monitoring Systems

- Power Quality Monitoring System at Austin Energy  
  Mehrdad Vatani ............................................................................................... 1052
- Substation Power Quality Monitoring to Prioritize System Improvements  
  Marek Waclawiak ........................................................................................... 1054
- Distribution Monitoring to Document Feeder Performance  
  Mark McGranaghan and Scott Peele ............................................................. 1058
- RMS Variation Analysis of Long-Term Power Quality Monitoring Systems  
  Daniel Sabin .................................................................................................. 1062
**Panels-10 - Lightning Performance of Transmission and Distribution Lines**

- Estimates of Lightning Ground Flash Density Using Optical Transient Density
  - William Chisholm .......................................................... 1068
- A Review of Lightning Information for Power Systems Analysis
  - Kenneth Cummins ............................................................ 1072
- Lightning and Distribution Reliability - A Comparison of Three Utilities
  - John McDaniel, Charles Williams and Alex Vestal .................. 1077
- Weather Normalization of Power System Reliability Indices
  - Charles Williams ............................................................ 1080
- Energy Handling Considerations for Transmission Line Arresters
  - Jonathan Woodworth and John Gravunder .............................. 1085

**Panels-11 - Structural Reliability-Based Design of Utility Poles and the National Electrical Safety Code**

- Panel Session: Structural Reliability-Based Design of Utility Poles and the National Electrical Safety Code
  - Lawrence Slavin, Nelson Bingler, Habib Dagher, Ronald Randle,
    Michael Voda, Ronald Wolfe and Jerry Wong .......................... 1088

**Panels-12 - Application of Superconducting T&D Technologies**

- An Assessment of Enabling Technologies for Transmission and Distribution Applications of Superconductors
  - Brian Johnson ................................................................. 1094
- High Temperature Superconducting Cables for Power Transmission and Distribution
  - David Lindsay ................................................................. 1096
- Installation and Operation of Superconducting Rotating Machines
  - Swarn Kalsi ................................................................. 1098
- Superconducting Magnetic Energy Storage and Fault Current Limiters - Projects, Considerations, and Outlook
  - Michael Steurer, Paulo Ribeiro and Mathias Noe ................... 1102

**Panels-13 - FACTS Applications and Technology for the Improvement of Power System Dynamic Performance**

- BC Hydro Experience Using a Small STATCOM to Address Utility Voltage Problems
  - Narend Reddy and Helen Iosfin ......................................... 1108
- FACTS Technology Application to Retire Aging Transmission Assets and Address Voltage Stability Related Reliability Challenges in San Francisco Bay Area
  - Bhaskar Ray ............................................................... 1113
- Dynamic Performance Studies for a ±150 MVar STATCOM for Northeast Utilities
  - Allen Scarfone, David Hanson, Christopher Horwill and Martin Aten .......................... 1121
- Dynamic Studies of the NYS Transmission System with the Marcy CSC in the UPFC and IPFC Configurations
  - Burce Fardanesh and Arnie Schuff ..................................... 1126
- Power Electronics-Based T&D Controllers: Technology Developments
  - Abdel-Aty Edris and Laszlo Gyugyi .................................. 1131
# PES Transmission & Distribution 2003
## Table of Contents

**Application and Development Concepts for a New Transformer-less FACTS Device - The Multimode Static Series Compensator (MSSC)**  
Robert Hellested, Hideo Okayama, Toshiyiki Fujii, Shinzo Tamai, Shinji Jochi, Masatoshi Takeda and Gregory Reed .......................... 1138

**Benefits of SVC and STATCOM for Electric Utility Application**  
Mojtaba Noroozian, Carson Taylor, Åke Petersson, Björn Thorvaldson and Bo A. Nilsson .......................................................... 1143

**Panels-14 - Structural Reliability-Based Design of Utility Poles and the National Electrical Safety Code**

Panel Session: Structural Reliability-Based Design of Utility Poles and the National Electrical Safety Code  
Lawrence Slavin, Nelson Bingel, Habib Dagher, Ronald Randle, Michael Voda, Ronald Wolfe and Jerry Wong ................................... 1151

**Panels-16 - FACTS Applications and Technology for the Improvement of Power System Dynamic Performance**

BC Hydro Experience Using a Small STATCOM to Address Utility Voltage Problems  
Narend Reddy and Helen Iosfin .............................................. 1157

FACTS Technology Application to Retire Aging Transmission Assets and Address Voltage Stability Related Reliability Challenges in San Francisco Bay Area  
Bhaskar Ray ........................................................................ 1162

Dynamic Performance Studies for a ±150 MVar STATCOM for Northeast Utilities  
Allen Scarfone, David Hanson, Christopher Horwill and Martin Aten .................. 1170

Dynamic Studies of the NYS UPFC and IPFC Configuration Transmission System with the Marcy CSC  
Burce Fardanesh and Arnie Schuff ........................................... 1175

Power Electronics-Based T&D Controllers: Technology Developments  
Abdel-Aty Edris and Laszlo Gyugyi ....................................... 1180

Applications and Development Concepts for a New Transformer-less FACTS Device - The Multimode Static Series Compensator (MSSC)  
Robert Hellested, Hideo Okayama, Toshiyiki Fujii, Shinzo Tamai, Shinji Jochi, Masatoshi Takeda and Gregory Reed .................. 1187

Benefits of SVC and STATCOM for Electric Utility Application  
Mojtaba Noroozian, Carson Taylor, Åke Petersson, Björn Thorvaldson and Bo A. Nilsson .......................................................... 1192

**Panels-18 - C37.48.1 – A Tutorial Guide for the Application of Current-Limiting Fuses**

An Introduction to the IEEE Guide for Current Limiting Fuses  
Frank Muench ........................................................................ 1200

Current Limiting Fuse Theory and Operation  
John Schaffer ........................................................................ 1203

Current-Limiting Fuse Type Class and Definitions  
Mark Stavnes ........................................................................ 1206

Current Limiting Fuses: Application Considerations and Cautions  
Frank Muench ........................................................................ 1209

Current-limiting Fuses: Coordination  
John Leach ............................................................................. 1212
### Panels-19 - Distribution Volt/Var Control – Existing Practices & Developments

- **Considerations When Applying Capacitors on Distribution Systems**
  - Jim Burke ................................................................. 1215
- **Volt/Var Control at Dominion**
  - Dan Ward ................................................................. 1220
- **Detroit Edison's Reactive Supply Program**
  - John McDaniel .......................................................... 1224
- **Distribution Voltage and Reactive Power Control at Georgia Power Company**
  - Lee Welch ............................................................... 1226

### Panels-21 - C37.48.1 — A Tutorial Guide for the Application of Current-Limiting Fuses

- **An Introduction to the IEEE Guide for Current Limiting Fuses**
  - Frank Muench .......................................................... 1229
- **Current Limiting Fuse Theory and Operation**
  - John Schaffer ............................................................ 1232
- **Current-Limiting Fuse Type Class and Definitions**
  - Mark Stavnes ............................................................ 1235
- **Current Limiting Fuses: Application Considerations and Cautions**
  - Frank Muench .......................................................... 1238
- **Current-limiting Fuses: Coordination**
  - John Leach .............................................................. 1241
