Proceedings of the ASME
Heat Transfer Division — 2003

Volume 1

Aerospace Heat Transfer (K-12)
Computational Heat Transfer (K-20)
Education (K-21)
Fire and Combustion (K-11)

presented at
THE 2003 ASME INTERNATIONAL MECHANICAL ENGINEERING CONGRESS
NOVEMBER 15–21, 2003
WASHINGTON, D.C.

sponsored by
THE HEAT TRANSFER DIVISION, ASME

organized by
RUSS SKOCYPEC (TECHNICAL PROGRAM REPRESENTATIVE)
SANDIA NATIONAL LABORATORIES

EROL ULUCAKLI (CHAIR, K-12)
LAFAYETTE COLLEGE

N. K. ANAND (CHAIR, K-20)
TEXAS A&M UNIVERSITY

LOUIS GRITZO (CHAIR, K-11)
SANDIA NATIONAL LABORATORIES

PAMELA NORRIS (CHAIR, K-21)
UNIVERSITY OF VIRGINIA

THE AMERICAN SOCIETY OF MECHANICAL ENGINEERS
Three Park Avenue / New York, N.Y. 10016
CONTENTS

AEROSPACE HEAT TRANSFER

Introduction
Erol Ulucakli .................................................................................................................. 1

IMECE2003-41026........................................................................................................... 3
Heat Transfer Measurements and Numerical Simulations in the Cooling of a Circular Cylinder by a Slot Jet of Air
F. Gori and I. Petracci

IMECE2003-41378........................................................................................................... 11
Uncoupling the Conjugate Heat Transfer Problem in a Horizontal Plate Under the Influence of a Laminar Flow
Ricardo S. Vásquez and Antonio J. Bula

IMECE2003-41428........................................................................................................... 19
Three-Dimensional Forced Convection Flow in Plane Symmetric Sudden Expansion
J. H. Nie and B. F. Armaly

IMECE2003-41500........................................................................................................... 29
Oxygen Fluorescence as a Means for Temperature and Pressure Measurement
Tadej Semenic, Ben Blake, Matthew Messana, and Ivan Catton

IMECE2003-41754........................................................................................................... 35
An Experimental Investigation of Liquid Jet Array and Single Phase Spray Impingement Cooling Using Polyalphaolefin
Ahmad K. Sleiti and J. S. Kapat

IMECE2003-41783........................................................................................................... 43
Experimental Study on the Possibility of Electric Power Generation by Using a Thermosyphon System
Tsutomu Hosokawa, Masafumi Tomita, Isamu Sakamoto, and Masaru Omura

IMECE2003-41908........................................................................................................... 47
Effect of Angle and Separation Distance on Heat Transfer on an Inclined Surface Subject to Airflow
Srinivasan C. Rasipuram and Karim J. Nasr

IMECE2003-43432........................................................................................................... 55
Experimental Investigation of High-Speed Rotating Heat Pipes

IMECE2003-43930........................................................................................................... 65
Flat Heat Pipe Cooling Devices for Mobile Computers
Yaxiong Wang and G. P. Peterson

IMECE2003-43968........................................................................................................... 73
Steady-State Operation of a Loop Heat Pipe: Network Thermofluid Model and Results
Nima Atabaki and B. Rabi Baliga

vii
COMPUTATIONAL HEAT TRANSFER

Introduction
N. K. Anand.................................................................................................................. 87

IMECE2003-41109........................................................................................................ 89
Optimal Weighting Factor for Single-Step Trapezoidal Method
Fuzhang Zhao

IMECE2003-41128........................................................................................................ 95
Forced Convection Flow Through an Unsaturated Wellbore
Maria Laura Martins-Costa and Rogério M. Saldanha da Gama

IMECE2003-41225........................................................................................................ 103
Effect of Inlet Flow Angle on Performance of Multilouved Fin Heat Exchangers
Dahai Guo and Danesh K. Tafti

IMECE2003-41384........................................................................................................ 111
Validation Experiments of Large Compartment Fires
Kevin B. McGrattan, Michelle Donnelly, Anthony Hamins, Eric Johnson,
Alex Maranghides, George Mulholland, Tom Ohlemiller, John Widmann,
and Jiann Yang

IMECE2003-41456........................................................................................................ 113
Turbulent Natural Convection in Horizontal Composite Cavities
Edimilson J. Braga and Marcelo J. S. de Lemos

IMECE2003-41463........................................................................................................ 121
Turbulent Heat Transfer in a Horizontal Enclosure With a Thin Porous Obstruction
in the Middle
Edimilson J. Braga and Marcelo J. S. de Lemos

IMECE2003-41468........................................................................................................ 131
Nusselt Number and Temperature Distribution in an Horizontal Cavity Containing
a Layer of Porous Material at the Bottom
Marcelo J. S. de Lemos and Viviani T. Magro

IMECE2003-41602........................................................................................................ 139
The Use of Spatial Statistics and Nuisance Variables in Estimating Parameters for
Validating Models and Predictions
A. F. Emery and D. Bardot

IMECE2003-41676........................................................................................................ 149
Framework for Validation of Computer Models Applied to a Resistance Spot
Weld Model
James C. Cavendish and John A. Cafeo

IMECE2003-41678........................................................................................................ 153
The Role of Uncertainty Analysis in Model Validation
Richard G. Hills and Ian H. Leslie

IMECE2003-41734........................................................................................................ 163
Modified Laser Flash Method for Thermal Property Measurements and the Influence
of Heat Convection
Bochuan Lin, Shen Zhu, Heng Ban, Chao Li, Rosalia N. Scripa, Ching-Hua Su,
and Sandor L. Lehoczky
IMECE2003-41806 .......................... 171
Consolidating Electrorefined Spent Nuclear Fuel Waste: Analysis and Experiment
K. J. Bateman and D. D. Capson

IMECE2003-41814 .................................. 181
Experimental Validation of Computer Models for Food and Polymer Extrusion
Yogesh Jaluria

IMECE2003-41841 .......................... 187
LES of Compressible Turbulent Annular Pipe Flow With a Rotating Wall
Joon Sang Lee, Xiaofeng Xu, and R. H. Pletcher

IMECE2003-41933 .................................. 201
An Effective Unit Cell Approach to Compute the Thermal Conductivity of Composites
With Cylindrical Particles
Deepak Ganapathy, Kulwinder Singh, Patrick E. Phelan, and Ravi S. Prasher

IMECE2003-41990 .................................. 211
Thermal Analysis and Buckling Behavior of Continuous Silicon Wafer Manufacturing
by EFG Method
D. Sun, C. Wang, and H. Zhang

IMECE2003-42011 .................................. 215
Heat Transfer Coefficient for a Packed Bed of Shredded Materials
Mohammad S. Saidi, Firooz Rasouli, and Mohammad R. Hajaligol

IMECE2003-42058 .................................. 221
A Comparison of Two Solution Techniques for the Inverse Problem of Simultaneously
Estimating the Spatial Variations of Diffusion Coefficients and Source Terms
Marcelo J. Colaco, Helcio R. B. Orlande, George S. Dulikravich, and Fabio A. Rodrigues

IMECE2003-42060 .................................. 231
Discontinuous Galerkin Method for Internal Thermal Radiation Problems
X. Cui and B. Q. Li

IMECE2003-42064 .................................. 237
A Discontinuous Finite Element Method for Non-Fourier Heat Conduction Problems
X. Zi and B. Q. Li

IMECE2003-42068 .................................. 245
A Numerical Technique for Modeling Thermoelectric Cooler With Temperature
Controller for Steady State CFD Applications
Kamal V. Karimanal, Michael J. Ellsworth, Jr., and Gamal Refai-Ahmed

IMECE2003-42105 .................................. 253
Higher Order Computations of the Convection-Diffusion Equation With Curved
Boundaries
Heejin Lee and Michael M. Chen

IMECE2003-42512 .................................. 259
Thermal Modeling of a Liquid-Cooled PM Traction Motor
Edward Jih, Thomas Abraham, Stephen Stella, Roy Davis, Bert Dinger, and Raymond Ong
Simulations of Metal Foam Cooling of High-Power Electronics Using the Equivalent Thermal Conductivity
Nihad Dukhan and Pable D. Quinones

Local Discontinuous Galerkin and Classical Finite Element Methods: Differences and Similarities
Paul Castillo

Numerical Solution of Melting in Side-Heated Rectangular Enclosure Under Electromagnetically Simulated Low Gravity
Eduardo Gonçalves, M. Faghri, Y. Asako, and M. Charmchi

Unsteady RANS Simulation of Turbulent Flow and Heat Transfer in a Channel With Periodic Array of Cubic Pin-Fins
A. K. Saha and Sumanta Acharya

Computation and Visualization of 3-D Marangoni and Magnetically-Driven Flows in Droplets
Y. Huo, X. Ai, and B. Q. Li

Computation of Turbulent Flows in Complex and Moving Geometries Using Immersed Boundary Method
Mayank Tyagi and Sumanta Acharya

Numerical Prediction of Flow and Heat Transfer Past a Circular Tube With Annular Fins
D. Chakraborty, G. Biswas, and P. K. Panigrahi

Natural Convection From a Pipe Buried in a Porous Medium With Variable Permeability
C. C. Ngo and F. C. Lai

Optimum Range Thermal Design With Computational Fluid Dynamics
Prabhat Tekriwal

Computations of Liquid Flow and Heat Transfer in the Hearth of a Blast Furnace
Steven Vernengo, Rade Milanovic, Chenn Q. Zhou, Pinakin Chaubal, and D. Huang

EDUCATION

CFD Modeling of Cross Corrugated Microturbine Recuperator
Jiri Hejcik and Miroslav Jicha

Thermal Conductivity Measurements of Thin Aluminum Layers Using Steady State Joule Heating and Electrical Resistance Thermometry in Suspended Bridges
