Preface	1093
Laudatio	1095

Review Articles

Growth and modification

The physics and technological aspects of the transition from amorphous to microcrystalline and polycrystalline silicon J. Kočka, A. Fejfar, T. Mates, P. Fojtík, K. Dohnalová, K. Luterová, J. Stuchlík, H. Stuchlíková, I. Pelant, B. Rezek, A. Stemmer, and M. Ito	1097–1114
New approaches for the production of nano-, micro-, and polycrystalline silicon thin films P. Roca i Cabarrocas	1115–1130
Thin polycrystalline SiGe films by aluminium-induced layer exchange Robert Lechner, Michael Buschbeck, Mario Gjukic, and Martin Stutzmann	1131–1143
Characterization of microstructure in amorphous and microcrystalline Si and related alloys by effusion of implanted helium W. Beyer	1144–1153
Laser crystallization of hydrogenated amorphous silicon N. H. Nickel, K. Brendel, and R. Saleh	1154–1168
Initial stages of porous silicon formation: An in-situ investigation of the electronic properties and surface morphology J. Rappich	1169–1178

Electrical and optical characterization

Ab initio calculations for photo-darkening and photo-induced structural changes in As_2S_3 and GeS_2 G. Lucovsky and M. A. Paesler	1179–1185
Lucky-drift model for avalanche multiplication in amorphous semiconductors O. Rubel, S. D. Baranovskii, I. P. Zvyagin, P. Thomas, and S. O. Kasap	1186–1193
Decay from steady-state photocurrent in amorphous semiconductors C. Main, S. Reynolds, and R. Brüggemann	1194–1207
The modulated photocurrent technique: a powerful tool to investigate band gap states in silicon based thin films Jean-Paul Kleider, Christophe Longeaud, and Marie-Estelle Gueunier	1208–1226
Numerical modelling of transient photoconductivity for density-of-states determination in microcrystalline silicon R. Brüggemann	1227–1232
Kinetics of optically excited charge carriers and defects in hydrogenated amorphous silicon and related alloys J. Whitaker, B. Yan, and P. C. Taylor	1233–1247

Paramagnetic defects in undoped microcrystalline silicon Friedhelm Finger, Luciano Baia Neto, Reinhard Carius, Thorsten Dylla, and Stefan Klein . . .	1248–1254
A pulsed EDMR study of hydrogenated microcrystalline silicon at low temperatures Christoph Boehme and Klaus Lips	1255–1274
Energy transfer to Er^{3+} ions in a-Si _{1-x} C _x :H alloys: emission at 1.54 mm wavelength G. Weiser, H. Kühne, and I. E. Terukov.	1275–1283
Device applications	
Thin-film silicon detectors for particle detection N. Wyrsh, S. Dunand, C. Miazza, A. Shah, G. Anelli, M. Despeisse, A. Garrigos, P. Jarron, J. Kaplon, D. Moraes, S. C. Commichau, G. Dissertori, and G. M. Viertel	1284–1291
Erbium electroluminescence in forward-biased amorphous silicon p-i-n diodes H. Mell, G. Weiser, E. I. Terukov, and V. Kh. Kudoyarova	1292–1299
Solar cell technology for fabrication of silicon light-emitting diodes M. S. Bresler, O. B. Gusev, and E. I. Terukov	1300–1307
Numerical modelling as a tool for understanding room temperature photoluminescence in a-Si:H/c-Si heterojunction solar cells Gottfried H. Bauer, Rudolf Brüggemann, Maximilian Rösch, Saioa Tardon, and Thomas Unold	1308–1315
Printed a-Si:H transistors for large area electronics R. A. Street, W. S. Wong, S. E. Ready, and R. Lujan	1316–1323

DOI: The fastest way to find an article online is the *Digital Object Identifier* (DOI).

Starting in Volume 198, issue 2 (January 2003), DOIs have been printed in the header of the first page of every article in *physica status solidi* (b). On the WWW, one can find an article for example with a DOI of 10.1002/pssa.200306608 at <http://dx.doi.org/10.1002/pssa.200306608>.

Please use the DOI of the article to link from your home page to the articles in Wiley Interscience.

The DOI is a result of a cross-publisher initiative to create a system for the persistent identification of documents on digital networks. More information is available from www.doi.org.
