CONTENTS

Preface .................................................................................................................. VII
Scientific Programme .......................................................................................... 1
Author Listing ...................................................................................................... 261

KEYNOTE SPEAKERS

Working at Thinking About Playing or A year in the life of a Games AI Programmer
Simon L. Tomlinson, Andrew Davies and Stephane Assadourian ......................... 5

Computer Games: A Paradigm for New Media and Arts in the XXI Century
Stéphane Natkin .................................................................................................. 13

DEVELOPMENTS IN GAMES

A DSP-Based 3-D Sound Synthesis System for Moving Sound Images
Kosuke Tsujino, Atsuhiro Shigiyia, Tomonori Izumi, Takao Onoye, Yukihiro Nakamura
and Wataru Kobayashi ......................................................................................... 23

A Review of Eye-Tracking and Usability in Computer Games
Michael Allen, Norman Gough, Quasim Mehdi and Brian Wink ......................... 26

An Actor Architecture to Develop Games for Blind Children
Cyrille Bertelle, Antoine Dutot, Sylvain Lerebourg, Damien Olivier
and Guillaume Prévost ....................................................................................... 31

Emergent Modelling of Physics for Games Development
Lubo Jankovic ..................................................................................................... 34

STORYTELLING AND NATURAL LANGUAGE PROCESSING

A Multiplayer Case Based Story Engine
Chris R. Fairclough and Pádraig Cunningham .................................................. 41

Mimicry: Another Approach for Interactive Comedy
Ruck Thawonmas, Hiroti Hassaku and Keisuke Tanaka ...................................... 47

An Inference Methodology for Reasoning About Visual Information for a Virtual
Environment
Xin Zeng, Quasim Mehdi and Norman Gough .................................................. 53
CONTENTS

GAMES ENGINES, MODELLING AND ANIMATION

Animating 9-Link Brachiation with Heuristic Control
Zheng Zhang and Tony Kai Yun Chan ......................................................... 61

Real-Time Motion Generation Based on Marionette Metaphor Using Two
Analog Joysticks
Koji Chadou, Yoshihiro Okada and Koichi Niijima ........................................ 69

Prototyping a Simple Layered Artificial Engine for Computer Games
Börje Karlsson ...................................................................................... 74

Optimising RETE for Low-Memory Multiagent Systems
Neil Madden ......................................................................................... 77

Petri Net Modelling for the Analysis of the ordering of Actions in Computer
Games
Stéphane Natkin and Liliana Vega ............................................................ 82

LEARNING TECHNOLOGIES

On-Line Adaptation of Game Opponent AI in Simulation and in Practice
Pieter Spronck, Ida Sprinkhuizen-Kuyper and Eric Postma ............................. 93

Anticipating Opponent Behaviour Using Sequential Prediction and Real-Time
Fuzzy Rule Learning
Pedro Demasi and Adriano J. de O. Cruz ..................................................... 101

Learning of AI Players From Game Observation Data
Stephen J. McGlinchey .............................................................................. 106

A Web-Based Game for Supporting Game-Based Learning
Olga Dziabenko, Maja Pivec, Christos Bouras, Vaggelis Igglesis,
Vaggelis Kapoulas and Ioannis Misedakis .................................................. 111

Combining Self Organizing Maps and Multilayer Perceptrons to Learn Bot-
Behavior for a Commercial Game
C. Thurau, C. Bauckhage and G. Sagerer .................................................... 119

AGENT ONTOLOGY AND ARCHITECTURE

Ontology for Perception in Cognitive Agents and Synthetic Environments
Hussam Suliman, Quasim Mehdi and Norman Gough .................................. 127
Multi-Agent Based Modelling: from Social Simulation to Real Time Strategy Games
Marco Remondino .................................................................................................................. 135

MHiCS, a Modular and Hierarchical Classifier Systems Architecture for Bots
Gabriel Robert and Agnès Guillot .......................................................................................... 140

3-D GRAPHICS

Current Depth of Field Algorithms and Techniques for Games
Daniel Rhodes, Richard Cant and David Al-Dabass ............................................................. 147

3D Scene Generation System and Its Intuitive Interface
Yoshiaki Akazawa, Yoshihiro Okada and Koichi Niijima ...................................................... 152

A New Depth of Field Algorithm With Applications to Games
Daniel Rhodes, Richard Cant and David Al-Dabass ............................................................. 157

AGENT BEHAVIOIRS

Behaviour Selection Using Neural Networks
Paul Thompson ......................................................................................................................... 165

Automatic Acquisition of Actions for Animated Agents
Adam Szarowicz, Marek Mittmann, Paolo Remagnino and Jaroslaw Francik ..................... 170

A Model for Creativity in Creature Generation
Paulo Ribeiro, Francisco C. Pereira, Bruno Marques, Bruno Leitão and Amilcar Cardoso ..... 175

A System for Creating Simple Character Behaviours
Stefan M. Grünvogel and Stephan Schwichtenberg ............................................................. 180

ALGORITHMS FOR ROUTING AND FLIGHT SIMULATION

Directional Extensions of Seek Steering Behavior
Michal Jakob .......................................................................................................................... 187

Robot Rescue: A Rescue Service Based on Dynamic Routing
Leon J.M. Rothkrantz, Bogdan Tatomir and Luca Porzio ..................................................... 192

Fast Marching and Fast Driving: Combining Off-Line Search and Reactive A.I.
Daniel Livingstone and Robert McDowell ........................................................................... 197
CONTENTS

A Rule Based and Probabilistic System for a Situation Recognition in a Flight Simulator
Patrick A.M. Ehlert, Quint M. Mouthaan and Leon J.M. Rothkrantz ........................................ 201

MOBILE AND WIRELESS GAMES

The Design and Performance of a Receiver Initiated Event Delivery Synchronization Service for Interactive Multiplayer Games
Stefano Ferretti and Marco Roccetti ......................................................................................... 211

A Generic Architecture for Multiplatform Wireless Game Development
Alexandre Damasceno, Börje Karlsson, Danielle Rousy D. da Silva ........................................ 219

Game Design for Wireless Devices
Börje Karlsson, Danielle Rousy D. da Silva and Alexandre Damasceno ................................. 222

Computer Vision Based Interaction Techniques for Mobile Games
Christian Reimann, Volker Paelke and Dirk Stichling ............................................................ 227

GAME OF GO

Genetic Search Techniques for Line Play Generation in the Game of GO
Julian Churchill, Richard Cant and David Al-Dabass ................................................................. 233

A General Framework for Vision Based Interactive Board Games
Jinchang Ren, Peter Astheimer and Ian Marshall ........................................................................ 238

Towards Multi-Objective Game Theory – With Application to Go
A.B. Meijer and H. Koppelaar ................................................................................................. 243

LATE PAPER

Rapid Application Development of Games for Undergraduate and Postgraduate Projects Using DirectX
Stuart Slater .................................................................................................................................. 253
