CONTENTS—VOLUME I

SESSION 1: Hydro as a key to sustainable economic and social development

Hydropower as a cornerstone of Ethiopia’s energy programme – M. Debebe, J. Perret and F. Isambert ................................................................. 1
Hydro: the key to sustainable economic development with reference to India – V.S. Bisht ................................................................. 3
Hydropower: the way of sustainable energy development in Iran – M. Gharavy ................................................................. 13
The role of sustainability in the development of hydro power facilities – K.I. Candee ................................................................. 23
Syrdarya case study: how to combine hydropower and irrigation – V.A. Dukhovny, A.G. Sorokin and A.S. Nikulin ................................................................. 27
A way to support the future hydropower development – S. Murakami ................................................................. 33
Sustainable environmental development of the Ghazi Barotha project – Z. Majeed, N. Islam and M.A. Butt ................................................................. 43
The sustainable development imperative – A. Scanlon and R. Davies ................................................................. 49
Hydropower development and poverty alleviation in Pakistan – Z. Ahmad and T.A. Malik ................................................................. 59

SESSION 2: Hydraulic Machinery - 1

Design, operation and safety of machinery for hydro plants – H. Brekke ................................................................. 67
Model testing as an important part of turbine refurbishment: philosophy any experiences – V. Kercan, S. Mačković, J. Macan, S.N. Tičinović, M. Sublijak, I. Bacinger and V. Bašić ................................................................. 77
The acoustic scintillation flow meter - a breakthrough in short intake turbine index testing – D.D. Lemon, D. Billeness and J. Lampa ................................................................. 87
Efficient cavitation detection technology for optimizing hydro turbine operation and maintenance – Y. Mossoba ................................................................. 93
Turbine instability explained by multidimensional cavitation diagnostics – B. Bajić ................................................................. 101
Countermeasures to reduce hydro abrasive wear at hydro turbine parts – M. Engelhardt and D. Oechsle ................................................................. 111
Development of new composite material solutions for Pelton wheels – J.M. Roman, G. Vuillerod and M. François ................................................................. 119
Optimizing Pelton turbines for refurbishment by numerical analysis – V.K. Pande, L.K. Harwani and S.M. Ramanathan ................................................................. 129
Recent Pelton turbine upgrading techniques – S. Risberg, J.O. Haugen, O. Rommetveit and M. Bjørke ................................................................. 139
Stability of the flow through Pelton turbine nozzles – J. Veslevý and F. Pochylý ................................................................. 147

SESSION 3: Best Practice; Social aspects; Stakeholder partnerships

Encouraging best practice and partnership with stakeholders – W. Um ................................................................. 157
Salto Caxias hydroelectric power plant - a tool for regional development – A. Fonseca dos Santos ................................................................. 165
Gaining development approval and public acceptance: the Basslink project – H. Locher and A. Scanlon ................................................................. 171
Sustainable management of archaeological monuments at Indira Sagar, India – S.K. Dodeja and V.B. Bhatt ................................................................. 179
Sustainable Human Development in the southeastern Antolia project – S. Tigrek and H.D. Altinbilek ................................................................. 189

SESSION 4: Operation and Maintenance

Hierarchical modelling of hydro plants – A. Ruprecht ................................................................. 197
Potential for improvement of hydro plant maintenance – J. Mayrhuber ................................................................. 207
Shaft vibration suppression by manipulating the poles – D. Magic, D. Dvekar and B. Bajic ................................................................. 215
Application of VSAT communication technology for control and supervision of hydropower projects in remote areas – Y. Prasad and P.C. Jose ................................................................. 219
Optimising operation of a low head cascade hydro system—Dj. Dvekar, G. Zrinski, D. Pecek
M. Brezpec, and Z. Muari

Multi-criteria decision making for a hydropower station—P. Bryla and J. Lonchampt

Measures for operational improvement at the Itaipu Binacional powerplant—M.A.P. Lefevre,
A.A. Villasanti L, J.R. Carmargo and C.V. Torino

Multi-area power market simulator—M.N. Tavares and S.O. Vilela

New Zealand’s experience with reform and an electricity “market”—B. Leyland

Optimization model of Gavoshan and Azad West of Iran—A. Mokhtare

SESSION 5: New approaches to project financing; Public/private partnerships; Risk management

New approaches to project financing—E.M. Baardsen

The hydro industry: the need to return to a long-term philosophy—J.G. Warnock

Funding hydropower: Experiences and strategies of KfW—K. Gihr

SESSION 6: Hydraulic Machinery II

Refinement in Francis turbine design—F.M. Mazzouji, M. François, L. Tomas, F. Paquet,
M. Couson and G. Vuillerod

Environmentally adapted technology for Kaplan runners—K-E. Värlind, S. Leonsson and
S. Videhult

Biodegradable lubricants for hydro machinery—P. Laemmle

CFD-based runner design for the Dobšiná storage pump—C. Genmer, M. Stallaberger and
V. Majercak

Commissioning test results of a new runner for pumped-storage plants—M. Inagaki,
K. Kubota, M. Amano and N. Umeda

Numerical three-dimensional turbulent flow analysis through a pump-turbine draft tube in the
turbine mode—P. Popovski, A. Lipej, Z. Cvetkovski and Z. Markov

Underground pumped hydro storage—K. Tanaka, F. Wada and H. Sakurai

Assessing the condition of hydro turbines by analysing operational data—J. Aoyama,
T. Izuhara and S. Yamamoto

Improving energy production at run of river plants—G. Cesari, S. Papalini and D. Amodio

Turbine development for the Wave Dragon wave energy converter—W. Knapp, C. Böhm,
J. Keller, W. Rohne, R. Schilling and E. Holmén

Safe control over large diameter shafts with multi jackbolt tensioning system—G. Ploke

A plant asset management system for hydroelectric turbine/generators—J.R. Rasmussen

SESSION 7: The importance and role of hydro development in southeastern Europe

Role and value of hydro and pumped storage in Southeast Europe—B. Trouille

Technical due diligence for hydro power in Eastern Europe—A. Draxler and H. Krisch

The available hydro potential of Croatia—B. Rupčić

Hydropower in Montenegro: a national economic asset—M. Marković and S. Vujadinovic

The Capljina pumped-storage plant in the power system of Bosnia and Herzegovina and
Croatia—N. Rusanov, S. Vucina, M. Stojsavljevic and D. Nemic

The Sava river multipurpose development scheme for the city of Zagreb—Z. Pavlin,
Z. Pletkapić and B. Beraković

The Ombla HPP multipurpose hydro project—Z. Sever

HPP Ombla in Croatia—proposed use of energy from groundwater in karst aquifer—
T. Paviša

Numerical model of karst flows—V. Jović

Numerical model of flows in the underground storage reservoir of the Ombla HE plant:
Natural state and the state planned by the project—V. Jović
SESSION 8: Electrical/electronic equipment

Hydro generating unit digital control system – G. Erceg, N. Tonković and T. Idžotic .......................... 499
Performance and economic benefits of integrating intelligent supplementary functions in a hydro control system – D. Meyer and E. Kopf ................................................................. 505
Comprehensive monitoring solution for hydro generating units – T. Pešut, Z. Milić, B. Donlagić and M. Hastings ................................................................. 515
Monitoring systems for hydro generating units: some economic aspects – B. Donlagić, S.N. Tičinović and S. Saskor ................................................................. 523
Numerical investigation of dynamic electromagnetic phenomena in permanent magnet generators – E. Schlemmer and F. Müller ................................................................. 531
The ramped direct high-voltage method of generator stator winding insulation testing – L.M. Rux and D.R. Bertenshaw ................................................................. 539
Revitalization programme for hydro generators – K. Čelić-Baran and M. Jurčić ................................................................. 547
Precautions in the modernization of hydro generators - how to eliminate old deficiencies and avoid new problems – S. Alvares, C. Haluska, Junior, C.A. Dias Costa and P. Kazuo Saitama ................................................................. 557
Modern tools and practices for large hydro generator design – A. Merkhouf, H. Karmaker, D. McLaren, J. Ferguson, B. Boueri, L. Benchaita and Y. Li ................................................................. 565
Fully automated parameter identification for synchronous machines – Mai Tu Xuan, J-J. Simond, A. Schwery and M. Regli ................................................................. 573
New trends in the production of conventional air-insulated switchgear – M. Predovan, B. Ferček, K. Flégar and V. Marenić ................................................................. 579
Redundant configurations in synchronous generator excitation systems – Z. Jurin, M. Kolić, M. Kajari and V. Česić ................................................................. 587
Compound-source controlled-rectifier exciter with digital voltage regulator for HPP Zakučac AC common service supplying synchronous generators – M. Kajari, I. Karas, D. Bojić and J. Svalina ................................................................. 593
Electrical breaking of hydro generator realized through excitation system with digital voltage regulator – B. Brkijač and M. Pertinić ................................................................. 601
Making the model of synchronous generator for governing purposes using the data from a permanent monitoring system – M. Miskovic ................................. 609
Electromagnetic compatibility of electrical and electronic equipment in hydro power plant Zakučac – J. Šimić, S. Gros, K. Meštrović, M. Poljak and S.N. Tičinović ................................................................. 613

Papers in Sessions 9 to 14, plus additional Case Studies, are published in Volume II of these Proceedings
