12th EUROPEAN SYMPOSIUM on
ARTIFICIAL NEURAL NETWORKS

ESANN'2004

Bruges, Belgium
April 28-29-30, 2004

Proceedings
Contents

Learning I

A New Learning Rates Adaptation Strategy for the Resilient Propagation Algorithm
A.D. Anastasiadis, G.D. Magoulas, M.N. Vrahatis ........................................ p. 1

High-accuracy value-function approximation with neural networks applied to the Acrobot
R. Coulom ........................................................................................................ p. 7

Input Space Bifurcation Manifolds of RNNs
R. Haschke, J. J. Steil ................................................................. p. 13

Online policy adaptation for ensemble classifiers
C. Dimitrakakis, S. Bengio ........................................................................ p. 19

Theory and applications of neural maps
Organised by U. Seiffert, IPK Gatersleben, T. Villmann, Univ. Leipzig,
A. Wismüller, Univ. Munich (Germany)

Theory and applications of neural maps
T. Villmann, U. Seiffert, A. Wismüller ...................................................... p. 25

Self-organizing context learning
M. Strickert, B. Hammer ........................................................................ p. 39

Visual person tracking with a Supervised Conditioning-SOM
D. Biddain, E. Herrero, R. Cabrejas ......................................................... p. 45

Forbidden Magnification? I.
A. Jain, E. Merényi .................................................................................. p. 51

Forbidden Magnification? II.
E. Merényi, A. Jain .................................................................................. p. 57

Description of the Group Dynamic of Funds' Managers using Kohonen's Map
C. Aaron, Y. Tadjeddine ................................................................. p. 63
Bayesian learning and Markov processes

Robust Bayesian Mixture Modelling
*C. Bishop, M. Svensén* ................................................................. p. 69

Flexible and Robust Bayesian Classification by Finite Mixture Models
*C. Archambeau, F. Vrins, M. Verleysen* ............................................. p. 75

Protein secondary structure prediction using sigmoid belief networks to parameterize segmental semi-Markov models
*W. Chu, Z. Ghahramani, D. Wild* ..................................................... p. 81

Non-linear Analysis of Shocks when Financial Markets are Subject to Changes in Regime
*M. Olteanu, J. Rynkiewicz, B. Maillet* ............................................... p. 87

Soft-computing techniques for time series forecasting
*Organised by I. Rojas, H. Pomares, Univ. Granada (Spain)*

Soft-computing techniques for time series forecasting
*I. Rojas, H. Pomares* ........................................................................ p. 93

Disruption anticipation in Tokamak reactors: A two-factors fuzzy time series approach
*F.C. Morabito, M. Versaci* ................................................................. p. 103

Time series analysis for quality improvement: a soft computing approach
*K. Xu, S.H. Ng, S.L. Ho* .................................................................... p. 109

Dynamic functional-link neural networks genetically evolved applied to system identification
*T. Marcu, B. Köppen-Seliger* ............................................................ p. 115

On-line Support Vector Machines and optimization strategies
*J.M. Górriz, C. G. Puntonet, M. Salmerón, R. Martín-Clemente,
S. Hornillo-Mellado, J. Ortega* .......................................................... p. 121

MultiGrid-Based Fuzzy Systems for Time Series Forecasting: Overcoming the curse of dimensionality
*L.J. Herrera, H. Pomares, I. Rojas, O. Valenzuela, J. González, M. Awad* p. 127
Learning II

Sparse Bayesian kernel logistic regression
G.C. Cawley, N.L.C. Talbot ................................................................. p. 133

Evolutionary Optimization of Neural Networks for Face Detection
S. Wiegand, C. Igel, U. Handmann ..................................................... p. 139

Speaker verification by means of ANNs
U. Niesen, B. Pfister ................................................................. p. 145

A chaotic basis for neural coding
N.T. Crook .................................................................................. p. 151

A biologically plausible neuromorphic system for object recognition and depth analysis
Z. Yang, A.F. Murray ................................................................. p. 157

Regularizing generalization error estimators: a novel approach to robust model selection
M. Sugiyama, M. Kawanabe, K.-R. Müller ........................................... p. 163

Dimensionality reduction and classification using the distribution mapping exponent
M. Jirina ...................................................................................... p. 169

A Modular Framework for Multi category feature selection in Digital mammography
R. Ghosh, M. Ghosh, J. Yearwood ...................................................... p. 175

Non-Euclidean norms and data normalisation

On fields of nonlinear regression models
B. Pelletier, R. Frouin ...................................................................... p. 187

A sliding mode controller using neural networks for robot manipulator

HMM and IOHMM modeling of EEG rhythms for asynchronous BCI systems
S. Chiappa, S. Bengio ...................................................................... p. 199
Independent Component Analysis and Non-Linear Projections

Linearization identification and an application to BSS using a SOM
F. J. Theis, E.W. Lang ................................................................. p. 205

Towards a Local Separation Performances Estimator Using Common ICA Contrast Functions?
F. Vrins, C. Archambeau, M. Verleysen ........................................ p. 211

Separability of analytic postnonlinear blind source separation with bounded sources
F. J. Theis, P. Gruber ................................................................. p. 217

How to project 'circular' manifolds using geodesic distances?
J.A. Lee, M. Verleysen ................................................................. p. 223

Representing hierarchical relationships using a modified Asymmetric SOM Algorithm
M. Martin-Merino, A. Muñoz .......................................................... p. 231

Industrial applications of neural networks
Organised by L.M. Reyneri, Politecnico di Torino (Italy)

Classification and Prediction in Highly Dimensional Spaces - An Application to Tribology
L.M. Reyneri ................................................................. p. 239

Shear strength prediction using dimensional analysis and functional networks
A. Alonso-Betanzos, E. Castillo, O. Fontenla-Romero, N. Sánchez-Marono .... p. 251

Enhanced unsupervised segmentation of multispectral Magnetic Resonance images
L. Morra, S. Delsanto, L.M. Reyneri .......................................................... p. 257

Comparison of different classification methods on castabilty data coming from steelmaking practice
M. Vannucci, V. Colla ................................................................. p. 263

Neural network-based calibration of positron emission tomograph detector modules
B. Lazzerini, F. Marcelloni, G. Marola, S. Galigani ................................ p. 269

Reduced dimensionality space for post placement quality inspection of components based on neural networks
S.K. Goumas, M.E. Zervakis, G. Rovithakis ........................................ p. 275
Neural methods for non-standard data
Organised by B. Hammer, Univ. Osnabrück, B.J. Jain, Tech. Univ. Berlin (Germany)

Neural methods for non-standard data
B. Hammer, B.J. Jain ................................................................. p. 281

A preliminary experimental comparison of recursive neural networks and a
tree kernel method for QSAR/QSPR regression tasks
A. Micheli, F. Portera, A. Sperduti ........................................... p. 293

SVM learning with the SH inner product
P. Geibel, B. J. Jain, F. Wysotzki ............................................. p. 299

Clustering functional data with the SOM algorithm
F. Rossi, B. Conan-Guez, A. El Golli ....................................... p. 305

Functional Radial Basis Function Network (FRBFN)
N. Delannay, F. Rossi, B. Conan-Guez, M. Verleysen .................. p. 313

Functional Preprocessing for Multilayer Perceptrons
F. Rossi, B. Conan-Guez ......................................................... p. 319

Recursive networks for processing graphs with labelled edges
M. Bianchini, M. Maggini, L. Sarti, F. Scarselli ........................ p. 325

The maximum weighted clique problem and Hopfield networks
B. J. Jain, F. Wysotzki .............................................................. p. 331

Learning III

Lattice ICA for the separation of speech signals
M. Rodriguez-Alvarez, F. Rojas, E. W. Lang, I. Rojas,
C. G. Puntonet, M. Salmerón ................................................... p. 337

Robust overcomplete matrix recovery for sparse sources using a generalized
Hough transform
F. J. Theis, P. Georgiev, A. Cichocki ......................................... p. 343

SOM algorithms and their stability consideration
Y. Kobuchi, M. Tanoue ............................................................. p. 349

Input arrival-time-dependent decoding scheme for a spiking neural network
H.H. Amin, R.H. Fujii .............................................................. p. 355
Novel approximations for inference and learning in nonlinear dynamical systems
A. Ypma, T. Heskes ................................................................. p. 361

Computational model of amygdala network supported by neurobiological data
M. Falgairolle, A. Gorge, J.M. Salotti, M.-M. Corsini ............................... p. 367

Reducing connectivity by using cortical modular bands
J. Vitay, N. Rougier, F. Alexandre ....................................................... p. 373

Modelling of biologically plausible excitatory networks: emergence and modulation of neural synchrony
K. Kube, A. Herzog, V. Spravedlyvyy, B. Michaelis, T. Opitz, A. de Lima,
T. Voigt ............................................................................................ p. 379

Learning by geometrical shape changes of dendritic spines
A. Herzog, V. Spravedlyvyy, K. Kube, R. Schnabel, E. Korkotian,
K. Braun, B. Michaelis ...................................................................... p. 385

Neuro-predictive control based self-tuning of PID controllers
C. Lazar, S. Carari, D. Vrabie, M. Kloetzer ........................................... p. 391

Hardware systems for Neural devices
Organised by P. Fleury, A. Bofill-i-Petit, Univ. Edinburgh (Scotland, UK)

Neural Hardware: beyond ones and zeros
P. Fleury, A. Bofill-i-Petit, A.F. Murray ................................................. p. 397

A VLSI reconfigurable network of integrate-and-fire neurons with spike-based learning synapses
G. Indiveri, E. Chicca, R. Douglas .......................................................... p. 405

BIOSEG: a bioinspired VLSI analog system for image segmentation

Implementation and coupling of dynamic neurons through optoelectronics
A.R.S. Romariz, K.H. Wagner ............................................................. p. 417

Architectures for Nanoelectronic Neural Networks: New Results
Ö. Türel, J. H. Lee, X. Ma, K. K. Likharev ........................................... p. 423
Support Vector Machines

Fuzzy LP-SVMs for Multiclass Problems
S. Abe ................................................................. p. 429

Sparse LS-SVMs using additive regularization with a penalized validation
criterion
K. Pelckmans, J. A.K. Suykens, B. De Moor .................................. p. 435

Bias Term $b$ in SVMs Again
T.-M. Huang, V. Kecman ............................................. p. 441

Neural networks for data mining
Organised by R. Andonie, B. Kovalerchuk, Central Washington Univ. (USA)

Neural networks for data mining: constrains and open problems
R. Andonie, B. Kovalerchuk ........................................ p. 449

Visualization and clustering with categorical topological map
M. Lebbah, F. Badran, S. Thiria ...................................... p. 459

Visualizing distortions in continuous projection techniques
M. Aupetit ............................................................... p. 465

An informational energy LVQ approach for feature ranking
R. Andonie, A. Cataron ............................................. p. 471

Using Andrews Curves for Clustering and Sub-clustering Self-Organizing
Maps
C. García-Osorio, J. Maudes, C. Fyfe ................................ p. 477

Data Mining Techniques on the Evaluation of Wireless Churn

Meaningful discretization of continuous features for association rules mining
by means of a SOM
M. Vannucci, V. Colla .............................................. p. 489

Convergence properties of a fuzzy ARTMAP network
R. Andonie, L. Sasu ................................................... p. 495

Knowledge discovery in DNA microarray data of cancer patients with
Emergent Self Organizing Maps
A. Ultsch, D. Kämpf .................................................. p. 501
Fast semi-automatic segmentation algorithm for Self-Organizing Maps
D. Opolon, F. Moutarde ................................................................. p. 507

Integrated low noise signal conditioning interface for neuroengineering applications
E. Bottino, S. Martinoia, M. Valle ..................................................... p. 513

Learning IV

Evolutionary tuning of multiple SVM parameters
F. Friedrichs, C. Igel ................................................................. p. 519

Fast bootstrap for Least-Square Support Vector Machines
A. Lendasse, G. Simon, V. Wertz, M. Verleysen ................................ p. 525

Neural dynamics for task-oriented grouping of communicating agents
J. J. Steil ................................................................. p. 531

Learning from Reward as an emergent property of Physics-like interactions between neurons in an artificial neural network
F. Davesne ................................................................. p. 537

Three dimensional frames of reference transformations using gain modulated populations of neurons
E. Sauser, A. Billard ................................................................. p. 543

Using classification to determine the number of finger strokes on a multi-touch tactile device
C. von Wrede, P. Laskov ................................................................. p. 549

Classification of Bioacoustic Time Series by Training a Decision Template Fusion Mapping
F. Schwenker, C. Dietrich, G. Palm ................................................................. p. 555

Spatial-Temporal artificial neurons applied to online cursive handwritten recognition
A. Rauf Baig ................................................................. p. 561

Face Recognition Using Recurrent High-Order Associative Memories
I.B. Ciocoiu ................................................................. p. 567

Author index ........................................................................................................ p. 573
