Internal Sulfate Attack and
Delayed Ettringite Formation

Villars, Switzerland

4-6 September 2002

Organised by
RILEM TC 186-ISA

Edited by K. Scrivener and J. Skalny

RILEM Publications S.A.R.L.
Contents

Preface XI

Participants XIV

Notes on Terminology XVI

Programme of Workshop XVII

Theme 1. Sulfates in Portland cement clinker and cement 3

1. Sulfates in Portland cement clinker and cement  3
   Hal F.W. Taylor

2. Distribution of sulfates in Portland cement clinker 18
   Duncan Herfort

3. Sulfates in high SO\textsubscript{3}/alkali clinker: Their dissolution kinetics and their influence on concrete workability and durability 28
   Valérie Michaud-Poupardin and Robert W. Suderman

Theme 2. Basics of ettringite stability 43

4. The stability of ettringite 43
   Fred P. Glasser

5. On the chemistry of delayed ettringite formation 65
   Hanaa Y. Ghorab

Theme 3. Case studies of DEF 85

6. Field cases of delayed ettringite formation 85
   Mike D.A. Thomas and T. Ramlochan

7. Delayed ettringite formation in massive concrete structures: and account of some studies of degraded bridges 98
   Loïc Divet and Alexandre Pavoine
8. Cracking and sulfate attack in field concrete in Spain  
Espéranza Menendez

Theme 4: Mechanisms of expansion

9. Factors affecting crystallization pressure  
George W. Scherer

10. The role of C-S-H and temperature in delayed ettringite formation  
Remi Barbarulo, Hughes Peycelon, Stéphanie Prené

11. Role of microstructural characterisation in understanding the mechanism of expansion due to delayed ettringite formation  
Charlotte Famy, Karen L. Scrivener, Adrian R. Brough

12. Ettringite needed in gaps?  
Vagn Johansen and Bjarne Osbæk

13. Delayed ettringite formation – a current assessment  
(paper not presented, but available to participants at workshop)  
Sidney Diamond

Theme 5: Parameters affecting expansion after exposure to elevated temperatures

14. Effects of cement parameters on expansion associated with DEF  
Steve Kelham

15. The influence of sulfate content in clinker or cement and curing temperature on DEF-related expansion of concrete  
Mario Collepardi and Jean Jacob Ogoumagh Olagot

16. Can addition of limestone eliminate the expansion of the mortars due to DEF?  
Wiesław Kurdowski and Sylwester Duszak

Theme 6: Cracks and Airvoids

17. Ettringite in air voids  
Eric Samson, Jacques Marchand, Bruno Zuber and Jan P. Skalny

18. Role of Cracks in Delayed Ettringite Formation  
Karen Scrivener, Amor Guidoun and Vincent Mathier
Theme 7: What have we learned from this workshop

19. Internal Sulfate Attack – Points of Agreement and Disagreement  265
    Jan Skalny

Summary of discussions during workshop  277
