The Proceedings of the 29th International Technical Conference on Coal Utilization & Fuel Systems

Volume I of II

April 18 – 22, 2004
The Sheraton Sand Key
Clearwater, Florida, USA
THE TABLE OF CONTENTS

Volume I

CO₂ Management I & II
Dr. Michael J. McKelvy, Arizona State University; and Dr. Klaus Lackner, Columbia University

The Effect of SO₂ on Mineral Carbonation in Batch Tests
Cathy Summers, David Dahlin and Thomas Ochs, Albany Research Center, U.S. Dept. of Energy, USA

Factors Affecting Ex-Situ Aqueous Mineral Carbonation Using Calcium and Magnesium Silicate Minerals

The Energetics of Mineral Carbonation
Hans Ziock, Eric Brosha, Bill Carey, Bryan Carlson, Steve Chipera, Dale Counce, George Guthrie, Neil Henson, Los Alamos National Laboratory, USA

U. S. Department of Energy’s Pilot Test Efforts to Sequester CO₂ in Geological Formations
Charles W. Byrer, Dawn M. Chapman, and Morgan H. Mosser, U. S. Department of Energy, National Energy Technology Laboratory, USA

Mineral Carbonation in Finland, An Approach To Implementation
Jens Kohlmann, Ron Zevenhoven, Helsinki University of Technology, Laboratory for Energy Engineering and Environmental Protection, FINLAND

Exploration of the Role of Heat Activation in Enhancing Serpentine Carbon Sequestration Reactions
Michael J. McKelvy, Andrew V.G. Chizmeshya, Jason Diefenbacher, Hamdallah Béarat and George Wolf, Arizona State University, USA

CO₂ Mineral Carbonation Processes in Olivine Feedstock: Insights from the Atomic Scale Simulation
Andrew V.G. Chizmeshya, Michael J. McKelvy, Deirdre Gormley, Ryan Nunez, Youngchul Kim and Ray Carpenter, Arizona State University, USA

Energy and Economic Considerations for Ex-Situ Aqueous Mineral Carbonation
<table>
<thead>
<tr>
<th>Title</th>
<th>Authors</th>
</tr>
</thead>
<tbody>
<tr>
<td>GIS-Based Screening of Geologic Potential for CO₂ Sequestration in Illinois</td>
<td>R.J. Finley, Steven R. Gustison, Jaewon Lim and Yong Soon Chang, Illinois State Geological Survey; and W. Hoback, Illinois Office of Coal Development, Dept. of Commerce and Economic Opportunity, USA</td>
</tr>
<tr>
<td>Mineral Carbonation and the Finnish Pulp and Paper Industry</td>
<td>Sebastian Teir, Tuulia Raiski, Inga Kavaliauskaite, Gintaras Denafas and Ron Zevenhoven, Helsinki University of Technology, Laboratory for Energy Engineering and Environmental Protection, FINLAND</td>
</tr>
<tr>
<td>Biomass I &amp; II</td>
<td>Christopher J. Zygarlicke, University of North Dakota Energy &amp; Environmental Research Center &amp; Dr. Alex E.S. Green, University of Florida</td>
</tr>
<tr>
<td>Short Rotation Woody Crops for Cofiring in Central Florida</td>
<td>S.A. Segrest, The Common Purpose Institute; D.L. Rockwood, D.R. Carter, W. H. Smith, and A.E.S. Green, University of Florida; and J.A. Strieker, Polk Co./UF Cooperative Extension Service, USA</td>
</tr>
<tr>
<td>Ash Fusion Temperature and Concentration of Elements in the Ash of Biomass and Coal</td>
<td>David I. Bransby, Department of Agronomy and Soils, Auburn University, USA</td>
</tr>
<tr>
<td>The Fate of Inorganic Matter in Biomass During Pyrolysis</td>
<td>R. P. Gupta, M. Jones, B. Buhre and T. F. Wall, University of Newcastle, AUSTRALIA</td>
</tr>
<tr>
<td>The Impact of Co-firing Biomass with Coal on the Retail Price of Electricity</td>
<td>David I. Bransby, Department of Agronomy and Soils, Auburn University, USA</td>
</tr>
<tr>
<td>Utilizing Animal-Tissue Biomass in Coal-Fired Boilers: An Option for Providing Biosecurity</td>
<td>Bruce G. Miller, Sharon Falcone Miller, The Energy Institute, Pennsylvania State University; and David W. Harlan, Taylor Packing Company-Cargill Meats Solution, USA</td>
</tr>
</tbody>
</table>
Recent European Research Activities and Operating Experiences in Biomass Co-Firing
Sven Unterberger and Klaus R.G. Hein, Institute of Process Engineering and Power Plant Technology (IVD), University Stuttgart, GERMANY..................................................165

A Green Alliance of Natural Gas, Biomass and Utility Desalination (GANGBUD)
Alex E.S. Green, James F. Klausner and Yi Lu, Department of Mechanical and Aerospace Engineering, University of Florida, USA..............177

R&D on Coal and Woody Biomass Co-firing Technology for Electric Power Utilities in Japan

Efficient Use of Animal Wastes for Power Generation and Heating-Cooling Applications
Peter Botros, National Energy Technology Laboratory, U. S. Dept. of Energy; Paul Grabowski, U.S. Dept. of Energy; and Zhong-Ying Chen, Science Applications International Corporation, USA..............203

Shedding of Biomass-Derived Superheater Ash Deposits
Flemming J. Frandsen, Ana Zbogar, Peter A. Jensen, Jørn Hansen, and Peter Glarborg, CHEC Research Centre, Department of Chemical Engineering, Technical University of Denmark, DENMARK............215

Low NOₓ Burners
Alan Paschedag, ASME-FACT Div.

Experience with Combining PRB and Eastern Bituminous Coals on Two 511MW Boilers with an Advanced Low NOₓ Combustion System
Stephen Nix, Kentucky Utilities Corp.; and Joel Vatsky and Tarkel Larson, Advanced Burner Technologies Corp., USA.................................227

Oxygen-Enrichment for NOₓ Control in Coal-Fired Utility Boilers
Fabienne Châtel-Pélage, Pavol Pranda and Nicolas Perrin, American Air Liquide; Hamid Farzan and Stanley, J. Vecchi, The Babcock & Wilcox Company, USA..................................................241
NO₂ Reduction from a 125-MW Wall-Fired Boiler Utilizing Oxygen-Enhanced Combustion
Dr. J. Bradley, Dr. L. E. Bool III, and Dr. S. Kobayashi, Praxair, Inc., USA

Advanced Erosion Protection Technology Provides Sustained Low NOₓ Burner Performance
Douglas Goebel and Michael Saari, We Energies; Bonnie Courtemanche, P.E., Riley Power Inc., and K. Scott Trunkett, Conforma Clad Inc., USA

Application of Low-NOₓ Burners and Reburn Technology to Reduce NOₓ Emissions from Coal-Fired Boilers
David K. Moyeda and Roy Payne, GE Energy, USA

Hydrogen I & II
Dr. A. Dilo Paul, Science Applications Int’l Corp.; Dr. Yen Nguyen, Kinetrics, Inc.; and George Rizeq, GE Global Research

Unmixed Fuel Processor: Pilot-Scale System Design and Initial Experimental Results
George Rizeq, Arnaldo Frydman, Raul Subia, Janice West, Vladimir Zamansky, GE Global Research (GEGR), Fuel Conversion Lab; and Kamalendu Das, National Energy Technology Laboratory, U.S. Department of Energy, USA

Evaluation Methodologies for Determining the Economic Feasibility of Coal Derived Hydrogen Fuels
John E. Saymansky and Tim T. Phipps, West Virginia University, USA

An Economic Assessment of Hydrogen Production Options in a More Carbon Constrained Environment
Y.V. Nguyen, Advanced Technologies Solutions, CANADA

Catalytic Dehydrogenation of Hydrocarbons to Produce Pure Hydrogen and Carbon Nanotubes
G. P. Huffman, Naresh Sha, Yuguo Wang, and Frank E. Huggins, University of Kentucky; and Bradley Bockrath, National Energy Technology Laboratory, U.S. Department of Energy, USA

Hydrogen Production from Combustion Looping (Solids - Coal)
Puneet Gupta, Luis G. Velazquez-Vargas, Theodore J. Thomas and L.-S. Fan, Chemical Engineering Dept., Ohio State University, USA
Reaction Enhanced Hydrogen Production from Water Gas Mixtures  
Himanshu Gupta, Mahesh V. Iyer and Bartev B. Sakadjian, Department of Chemical Engineering, The Ohio State University, USA

---

Low-Cost Renewable Hydrogen from SOx, NOx and Mercury Emission Control  
Robin Z. Parker, SRT Group, Inc., USA

---

Hydrocarb Process for Hydrogen Production from Coal  
J.G. Cleland and P.M. Grohse, Hydrocarb, Inc., USA

---

Development of a Novel Process for Hydrogen Production from Low Rank Coal  
Craig W. Hawthorne, Roland Berger, Klaus R. G. Hein, University of Stuttgart, Institute of Process Engineering and Power Plant Technology, GERMANY

---

Advanced Simulations  
Dr. Kenneth M. Bryden, Iowa State University

A Process Workbench for Virtual Simulation of Advanced Power and Polygeneration Systems  
Michael J. Bockelie, Dave Swensen, Mike Maguire, Choingguang Yan, Martin Denison, Zumao Chen, Connie Senior and Adel Sarofim, Reaction Engineering International, USA

---

The IECMaps: An Integrated Modeling Environment for High-Performance, Low-Emission Power Plants  
Edward S. Rubin, Carnegie Mellon University, USA

---

VE-Suite: A Foundation for Building Virtual Engineering Models of High Performance, Low Emission Power Plants  
Dr. Kenneth M. Bryden and Douglas McCorkle, Iowa State University, USA

---

DOE’s Fossil Energy Advanced Materials Program  
Fred Glaser, U.S. Department of Energy

Hydrogen Separation Using ORNL’s Inorganic Membranes  

---

Commercial Process for the Production of Silicon Carbide Fibrils  
Richard Nixdorf, ReMaxCo Technologies, Inc., USA
Colloidal Processing of Precursors for Corrosion Resistant Coatings
Beth Armstrong, Glen H. Kirby and Kevin M. Cooley, Oak Ridge National Energy Technology Laboratory, U. S. Department of Energy, USA

High-Temperature Corrosion Behavior of Fe-Al Based Weld Overlay Coatings for the Protection of Boiler Tubes in Low NOx Environments
J.R. Regula, J.N. DuPont, and A.R. Marder, Lehigh University, Materials Science and Engineering, USA

Dennis K. McDonald, The Babcock & Wilcox Company; and Edward S. Robitz, Babcock & Wilcox Research Center, USA

Materials Science-Based Approaches for Corrosion Protection in Advanced Coal-Based Power Systems
P.F. Tortorelli, I.G. Wright, B. A. Pint and M. P. Brady, Oak Ridge National Laboratory, U.S. Dept. of Energy, USA

Optimization of Oxide Dispersion Strengthened FeCrAl and Fe₃Al Alloys for Advanced Power Systems Applications
B. Kad, University of California-San Diego; Ian Wright and Roddie R. Judkins, Oak Ridge National Laboratory; and Gaylord Smith, Special Metals Corporation, USA

Instrumentation & Controls
Dr. Robert Romanosky, National Energy Technology Laboratory, U.S. Department of Energy

Electrical Sensors for Flame Impedance Mapping
Qi Qi, Bochuan Lin and Heng Ban, Department of Mechanical Engineering, University of Alabama at Birmingham, USA

Understanding the Operation and Use of High Temperature Electrochemical Corrosion Rate Probes

Real Time, In-Situ Laser Composition Sensor for Feedstock and Ash in Coal-Fired Boilers and Gasifiers
Arel Weisberg, Arthur Poulos, Joseph Craparo and Robert De Saro, Energy Research Company, USA
Development of an Intelligent Coal Flame Analysis System (ICFAS) for Coal Fired Power Plants

John Dooher, Adelphi University and Dooher Institute of Physics and Energy, USA

Realtime Flyash Quality Monitoring

Hans Conrads, PROMECON, GmbH, GERMANY; Edwin Shelton and J.J. Letcavits, American Electric Power; and Todd Sommer, PROMECON

A Multi-Point Corrosion Monitoring System Applied in a 1300 MW Coal-Fired Boiler

Plant Test of An On-Line Fireside Corrosion Monitor

Bochuan Lin and Heng Ban, Department of Mechanical Engineering, University of Alabama at Birmingham; and Arun Mehta, Electric Power Research Institute, USA

Gasification Technologies

Massood Ramezan, Science Applications Int'l Corporation & Gary Stiegel, National Energy Technology Laboratory, U. S. Department of Energy

Coal-Based Gasification Technologies: The Pathway to Economical Hydrogen Production

Gary J. Stiegel, U.S. Dept. of Energy, National Energy Technology Laboratory; and Massood Ramezan, Science Applications Int'l Corp., USA

A New Gasification Process for the Conversion of Carbonaceous Feedstocks into Syngas

Ben Phillips, Emery Energy Company, USA

Transport Gasifier Operations at the Power Systems Development Facility

James R. Longanbach, National Energy Technology Laboratory, U.S. Department of Energy, USA

An Update on the Development of an Improved Performance Refractory Material for Slagging Coal Gasifiers

Cynthia A. Powell, Kyei-Sing Kwong, James P. Bennett, Richard E. Chinn, and Rick Krabbe, Albany Research Center, U.S. Dept. of Energy, USA
Steady State Operational Characteristics of an N-Valve
Ronald W. Breault (National Research Council) and Lawrence J. Shadle, National Energy Technology Laboratory, U.S. Dept. of Energy, USA. 527

Combustion
Stefan Laux, Praxair, Inc.

Ash Deposition in Kraft Recovery Boilers
R. P. Gupta, University of Newcastle, AUSTRALIA; and R. Backman, Abo Akademi University, FINLAND. 539

On-Site Experimental Investigations for Understanding Large-Scale Coal Combustion
Oliver Greifl, Christoph Sauer, Sven Unterberger, and Klaus R.G. Hein, Institute of Process Engineering and Power Plant Technology (IVD), University of Stuttgart; and Martin Käss, EnBW Kraftwerke AG; and Thomas Sabel, EnBW Energy Solutions GmbH, GERMANY. 551

Structure, Reactivity, and Nitrogen Evolution Characteristics of a Suite of Solid Fuels
David A. Tillman, D.A. Tillman and Associates; and Bruce G. Miller, David K. Johnson and David J. Clifford, The Energy Institute, Pennsylvania State University. 563

Quality of Coal and Coal Combustion Products (CCP’s) from a Power Plant Utilizing Powder River Basin Coal – Results of a Geochemical Study
Ronald H. Affolter and Michael E. Brownfield, U.S. Geological Survey, USA. 575

Slag Inhibition Success Utilizing Targeted In-Furnace Injection in a Boiler Burning Sub-bituminous Coal
Chris R. Smyrniotis, Fuel Tech, Inc., USA. 587

A Review of the State-of-the-Art and A View of the Future for Combustion-Based Coal Power Generation
John L. Marion, ALSTOM Utility Boilers; and Gregory N. Liljedahl and Sean Black, ALSTOM Power Inc., USA. 601

Advanced Coal-Fired Power Generation Systems
Arun C. Bose, and Donald L. Bonk, National Energy Technology Laboratory, U.S. Department of Energy; Archie S. Robertson and Zhen Fan, Foster Wheeler Power Group Inc., USA. 613
CO₂ Capture
George Guthrie, Los Alamos National Laboratory; Cathy Summers, Albany Research Center, U.S. Department of Energy; and Dr. Richard P. Walters, Albany Research Center, U.S. Department of Energy

Hybrid Heat Exchange for the Compression Capture of CO₂ from Recirculated Flue Gas
Danylo Oryshchyn, Thomas Ochs and Cathy Summers, Albany Research Center, U.S. Department of Energy, USA

Oxycombustion Process in Pulverized Coal-Fired Boilers: A Promising Technology for CO₂ Capture
Ravi Sangras, Fabienne Châtel-Pélage and Pavol Pranda, American Air Liquide; Hamid Farzan and Stanley J. Vecci, The Babcock & Wilcox Company; Yongqi Lu, Scott Chen and Massoud Rostam-Abadi, Illinois State Geological Survey; and Arun C. Bose, National Energy Technology Laboratory, U.S. Department of Energy, USA

Oxy-Fuel Combustion Systems for Pollution Free Coal-Fired Power Generation
Thomas Ochs, Danylo Oryshchyn, Cindy Dogan, and Cathy Summers, Albany Research Center, U.S. Department of Energy; Dietrich Gross, Brian Patrick, Alex Gross and Mark Schoenfield, Jupiter Oxygen Corporation; and William Simmons, CoalTeck LLC, USA

Turbo Oxy Retrofit of a Typical 400 MW, Utility Boiler for CO₂ Capture
Ligang Zheng and Mark Douglas, CANMET Energy Technology Center, Natural Resources Canada, CANADA

Regenerable CO₂ Capture with MgO Sorbent
Ronald W. Breault, National Research Council (National Energy Technology Laboratory, U.S. Department of Energy); and Randall Reasbeck, Wheeling Jesuit University, USA

Role of Vacuum/Steam Calcination in CaO Based Reactive Separation of CO₂
Bartev B. Sakadjian, Mahesh V. Iyer and Himanshu Gupta, Department of Chemical Engineering, The Ohio State University, USA

Enhanced Coalbed Methane Development via Direct Atmospheric CO₂ Capture
Frank Zeman, Columbia University, Department of Earth & Environmental Engineering, USA

Carbon Sequestration Leadership Forum
George Lynch, Office of Coal Import & Export, U.S. Department of Energy, USA
