

FRACTALS IN GEOTECHNICAL ENGINEERING

**Exploratory Workshop,
Innsbruck, 2003**

Edited by

Dimitrios Kolymbas

University of Innsbruck, Institute of Geotechnic and Tunnel Engineering

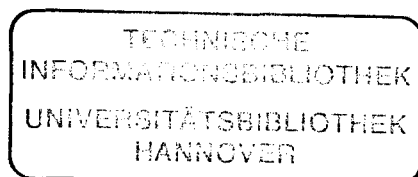

TABLE OF CONTENTS

Preface	v
Acknowledgement	vi
Table of contents	vii

Fractals in Geotechnical Engineering	1
---	----------

Dimitrios Kolymbas

1	Introduction	1
2	Fractals in Geomechanics	1
3	Scale invariant grain size distributions	2
4	Fractal patterns	4
5	Fractal grains and friction angle	5
6	Theory of V. N. Rodionov	9
7	Consequences of fractality for numerical simulation	10
8	Open problems	12
9	Perspectives for the future	13
	Bibliography	13

Scaling methods, fractals and the size effect of multiple fracture **15**

Feodor M. Borodich

1	Introduction	15
2	Scaling and fractals	16
2.1	Definitions of fractals	17
2.2	Fractal fracture	19
2.3	Classification of scalings	19
2.3.1	Classic scaling	19
2.3.2	Statistical scaling or self-similarity of patterns	21
2.3.3	Parametric-homogeneous scaling	22
2.3.4	Scaling of mathematical fractals	24
2.3.5	Scaling of physical fractals	25
2.3.6	Other scalings	26
2.3.7	Self-affine scaling	27
3	Fractal model of multiple fracture	28
3.1	Fracture energy of the process zone	28
3.2	Size effect	31
4	Conclusions	32
	Bibliography	33

Fractality of crushed brittle materials: geometry or fracture mechanics? **37**

Andrew Palmer

1	Introduction	37
---	--------------------	----

2 Fractal distribution of fragment sizes 39

3 Experimental results from ice mechanics 42

Acknowledgements 44

Bibliography 45

Fractal properties in rock fragmentation: result of a self similar process or consequence of a pure stochastic phenomenon? 47

Thierry Villemin, Luc Empereur-Mot

1 Introduction 47

2 The OBSIFRAC model 48

3 Constant probability fragmentation 49

4 Random fragmentation 50

5 Random fragmentation with minimal distance between fractures..... 51

6 Discussion and conclusions 53

Bibliography 54

Application of the fractal fragmentation model to the fill of natural shear zones 57

David Masin

1 Introduction 57

2 The micromechanics of constrained comminution 58

3 Shear zones in the Mrázovka tunnel 60

4 Discussion of possible applications 63

5 Conclusions 64

Acknowledgment	65
Bibliography.....	65

The Development of Fractal Geometries in Deformed Rocks **67**

Bruce E. Hobbs and Alison Ord

1 Scale Invariance, Fractals and Emergence: Some Definitions	67
2 Folding of Layered Rocks	70
3 Folding Theory	71
4 Behaviour of Anisotropic, Micro-Layered Materials	72
5 Summary.....	74
Bibliography.....	76

3D Imaging of Jointed Rock Masses **79**

Alison Ord, Fabio Boschetti, Bruce Hobbs

1 Introduction	79
2 A Step Forward.....	82
3 Conceptual Explorations.....	84
3.1 Iterated function systems	84
3.2 Phase space reconstructions.....	84
3.3 Epsilon machines	85
4 Issues	89
5 Conclusions	90
Acknowledgements	90
Bibliography.....	90

Fractal Dimension Uncertainty from Measurements: A Probabilistic Procedure

93*Ian Lerche*

1	Introduction	93
2	Cumulative Probability Considerations	94
2.1	General Description	94
2.2	Scaling Dimension Considerations	95
3	An Illustrative Application	96
4	Box Counting Uncertainties	98
5	Discussion and Conclusion.....	100
	Acknowledgements	101
	Bibliography.....	101

Characterization of anisotropy – scale relations for complex irregular structures

103*Cristian Suteanu*

1	Aim of the paper	103
2	Challenges and principles	104
3	The virtual fluid flow approach	105
4	Percolation lengths: anisotropy vs. scale	106
5	Conclusions	113
	Acknowledgments	113
	Bibliography.....	113

Fractal geometry analyses of rock fabric anisotropies and inhomogeneities **115**

J. H. Kruhl, Francisc Andries, Mark Peternell, Sabine Volland

1	Introduction	115
2	Pattern inhomogeneity	117
3	Crystal distribution inhomogeneities in igneous rocks.....	117
4	Pattern anisotropy	121
5	Fracture patterns	121
6	Grain boundary patterns	125
7	Discussion.....	131
	Acknowledgments.....	132
	Bibliography.....	133

Fractals and scale effects in fractured multi-layered red beds **137**

Christian A. Hecht

1	Introduction	137
2	Observations	138
	2.1 Application of fractal analysis	138
	2.2 The concept of geomechanical order	140
	2.3 Order on the sample scale.....	141
	2.4 Order on the outcrop scale.....	142
	2.5 Scale effects of fractals	143
	2.6 Scale transition model.....	144
	2.7 Discussion.....	146

Conclusions 147

Bibliography 147
