Table of contents:

Key-note papers

13 Technology roadmap for materials of construction for the chemical and allied process industries, Emory Ford, Materials Technology Institute, United States of America (P0406)

17 Crevice corrosion testing of stainless steels in natural and synthetic biochemical seawater - results from a round robin test involving 19 laboratories, Trond Rogne, SINTEF Materials Technology, Norway (P0446)

33 Supermartensitic stainless steels for oil and gas industry, a review. Jacques Charles, Ugine & ALZ Groupe Arcelor, France (P0473)

46 Use of stainless steel in LNG plants, Sonny Singh, Bechtel Corporation, United States of America (P0408)

Titanium

49 Corrosion and Accelerated Hydriding of a Titanium Process Column in Acetic Acid Service, Michael James, DuPont Company, United States of America (P0482)

50 A trio of lower-cost ruthenium-enhanced titanium alloys for resisting severe chemical service, Ronald Schutz, RMI Titanium Company, United States of America (P0414)

60 Advanced new titanium clad material, Roy Hardwick, Sigmabond Technologies Corporation, Canada & Gernot Heigl, Voestalpine Grobblech GmbH & Co., Austria (P0427)

71 Requirements of inert gas shielding and purging for successful titanium welding, James McMaster, MC Consulting, United States of America (P0479)

High Temperature

85 Nickel alloys solution to economic losses due to "metal dusting" in refineries, CPI and petrochemical industries, Dinesh C. Agarwal, ThyssenKrupp VDM Technologies Corp, United States of America (P0401)

100 New developments in stainless steels for high temperature services in petroleum refining, Cathleen A. Shargay, Fluor Daniel Inc, United States of America (P0458)

106 Managing and assessing high temperature corrosion in the 21st century, Randy C. John, Shell Global Solutions, United States of America (P0470)

116 Heat resistant cast alloy steels in the petrochemical industry, Danie Slabbert, Steloy Castings, South Africa (P0471)

Welding

131 Laser materials processing for offshore application, Thomas Himmer, Fraunhofer USA Inc, United States of America (P0410)

139 Ductility-dip cracking in stainless steels, John C. Lippold, Ohio State University, United States of America (P0488)

140 Development of Ni-Cu Filler Metals for Joining Austenitic Stainless Steels (P0437)

149 Distortion control in Precision Weldment PE-GTAW = Low Cost Alternative, Nate Ames, Edison Welding Institute (EWI), United States of America (P0462)

156 Recent developments in nickel base material welding considering the influence of shielding gas on the hot cracking resistance, Thomas Kannengiesser, BAM, Germany (P0475)

168 Explosion welding, technical growth and commercial history, George A. Young, DMC Clad Metal Div - Dynamic Materials Corp, United States of America (P0439)

174 Post Fabrication cleaning: benefits and practicalities, Chris Baxter, Outokumpu Stainless Ltd, United Kingdom (P0442)

179 Stainless steel arc welding consumables for cryogenic applications, Graham Holloway, Metode Products Ltd, United Kingdom (P0449)

189 Phase transformations during welding and post weld heat treatment of a 12Cr-6.5Ni-2.5Mo supermartensitic stainless steel, John C. Lippold, Ohio State University, United States of America (P0447)

Duplex

203 Point counting of intermetallic phase precipitates in ferritic-austenitic stainless steels, Andrea Gregori, TWI Ltd, United Kingdom (P0404)

213 Evaluation of superduplex consumables in supermartensitic pipe - a further report on welding procedure and mechanical testing, Vincent van der Mee, Lincoln Smitweld BV, the Netherlands (P0409)

225 Alternative filler metals for duplex and superduplex stainless steels. Russel Fuchs, Böhler Thyssen Welding, United States of America (P0405)

230 Utilizing Strength for Lower Weight and Cost in Structural Applications using the New Low Nickel Duplex Grade LDX 2101® (S32101), Claes Ericsson, Outokumpu Stainless AB, Sweden (P0428)

241 Improved corrosion resistance of super duplex weldments, Nate Ames, Edison Welding Institute (EWI), United States of America (P0463)

247 Production of heavy plates in superduplex stainless steel grades, Patrick Toussaint, Industeel, France (P0466)
Welding super duplex stainless steels with Ni base filler materials: recent development of new consumables, Bernard Bonnefois, Industeel, France (P0467)

Overmatching superalloy consumable Inco-Weld® 686CPT® broadens its applications to include welding super austenitics and super duplex stainless steels, Chris Thornton, Special Metals Welding Products Co, United States of America (P0468)

Advantages and application of a centrifugally cast super duplex stainless steel cylinder, Tyler Nooyen, Spuncast Inc, United States of America (P0443)

Socrates: A comprehensive framework to select corrosion resistant materials for oil and gas applications, Sridhar Srinivasan, InterCorr International, Inc, United States of America (P0452)

A new method for producing Bi-Metal CRA lined pipe, Paul Montague, Cladtek International Pty Ltd, Australia (P0420)

Bi-metallic pipe using AL-6XN® (UNS N08367) alloy, John J. Dunn, Allegheny Ludlum Corporation, United States of America (P0411)

Stainless steels for controlling erosion-corrosion, Xinming Hu, University of Leeds, United Kingdom (P0417)

10 Years experiences with BuBi-pipes - New progresses, Iris Rommerskirchen, BUTTING, Germany (P0456)

Development of high strength 18Cr-9Ni-Nb-V-W-N-low C austenitic stainless steel tube for thermal power, Tetsuo Ishitsuka, Nippon Steel Corporation, Japan (P0423)

Recrystallization behaviour of cold rolled dual phase ferritic stainless steel and its effect on formability, M.A. Zapata, Thyssenkrupp Mexinox, Mexico (P0451)

Vistar - a new high strength super-austenitic stainless steel, David Gibson, Noel Village, United Kingdom (P0480)

The evolution and optimization of high performance alloys for oil exploration and production applications, John Magee, Carpenter Technology Corporation, United States of America (P0429)

Clad pipes for the oil and gas industry - Manufacturing and applications, Roland Schimboeck, Voestalpine Grobblech GmbH & Co KG, Austria (P0435)

Corrosion resistance options for severe oilfield applications, Manuel Maligas, FMC Corporation, United States of America (P0422)

New generation of tubular materials for downhole control and subsurface umbilical and flowline applications in the offshore oil and gas industry, Dr. Stephen A. McCoy, Fine Tubes Ltd. United Kingdom (P0474)

Utilizing clad piping to improve process plant piping integrity, reliability and operations (P0421)

From RBI to asset management, Neil S. Henry, ABB Eutech Ltd., United Kingdom (P0477)

Failure analysis of the HCL Column InterCooler: Cause, effect, results and economical solution for severe media, Mohsen Zaher, Egyptian Petrochemicals Co., Egypt (P0412)

Effect of oxidizing impurities on the corrosion performance of Ni-Cr-Mo alloys in hydrochloric acid solutions, Nacera Sabrina Meck, Haynes International Inc, United States of America (P0448)

More corrosion resistant high-alloyed metallic tank materials for transport of dangerous goods and water-polluting substances, Dinesh C. Agarwal, Thyssen Krupp VDM, United States of America (P0455)

Alloy 33: A versatile alloy for concentrated mineral acid and other highly corrosive application, Dinesh C. Agarwal, Thyssen Krupp VDM USA Inc., United States of America (P0464)

Using real-time, on-line corrosion and process control to validate materials selection in a primarily organic process, Dawn Eden, InterCorr International, Inc, United States of America (P0457)

Stainless steel for corrosion control in the food processing industry, Benjamin Vaidez Salas and Michael Schorr, Universidad Autonoma de Baja California, Mexico (P0402)

Application of a super austenitic stainless steel "NAS254N" for soy sauce plants, Yutaka Kobayashi, Nippon Yakin Kogyo Co Ltd, Japan, (P0425)

Global value added solutions for polishing and grinding non-corrosive specialty metals, Fred Kurpiel, Imaos Inc, United States of America (P0445)
Stainless Building Seminar

439 Use of stainless steel in exterior cladding, L.S. Ng, Cesar Pelli & Associates, United States of America (P0453)

446 Global value added solutions for polishing and grinding non-corrosive specialty metals, F.T. Kurpiel and F. Zenere, IMEAS, United States of America (P0445)

453 Stainless steel finish specification for optimum appearance, function, and durability, C. Houska, Outokumpu, United States of America (P0485)

454 Development of type 430 stainless steel sheet with high surface quality, J. Hamada, I. Muto, S. Ogawa, M. Hiro, J. Kozuka, Y. Yamada and S. Hishimoto, Nippon Steel & Sumikin Stainless Steel Corporation, Japan (P0459)

460 The integration of stainless steel in an historic fabric - the New York Public Library's South Court, E. Bachiller, Davis Brody Bond LLP, United States of America (P0486)

461 Metal surfaces cladding for the twenty first century - emphasis: stainless steel, L. W. Zahner, A. Zahner Company, United States of America (P0483)

462 Avoid deicing salt corrosion of architectural stainless steel applications, Dr. J. Fritz, Outokumpu, United States of America (P0484)

463 A comparison of structural stainless steel design standards, B.A. Burgan and N.R. Baddoo, The Steel Construction Institute, United Kingdom (P0478)

480 Large stainless steel hollow section as structural material, P. Yrjölä, Stalatube, Finland (P0487)

481 The selection and use of duplex 2205 stainless rebar for two coastal bridges, R. Schnell, Carpenter Technology Corporation, United States of America (P0433)

488 Utilizing strength for lower weight and cost in structural applications using the new low nickel duplex grade LDX 2101® (S32101) C. Ericsson, Outokumpu, Sweden (P0428)

499 Stainless steels as alternative reinforcement materials for concrete, H.G. Wheat, D.W. Fowler and J.O. Jirsa, Mechanical Engineering Department, Texas Materials Institute, United States of America (P0430)
