Mine Ventilation

Edited by

R. Ganguli
Associate Professor of Mining Engineering, University of Alaska Fairbanks

S. Bandopadhyay
Dean, School of Mineral Engineering and Professor of Mining Engineering,
University of Alaska Fairbanks
Table of Contents

Foreword IX
Organizing Committee XI

Ventilation systems design

Comparative evaluation of block cave ventilation systems 3
F. Calizaya & K.R. Mutama

A study on event of unstable operation of an axial fan in a ventilation network 15
J. Krawczyk & S. Wasilewski

Airflow in leaking ducts with multiple fans 25
J. Partyka & O. Johnson

Assessing the performance and efficiency of booster and main fans in a large ventilation network 33
K.R. Mutama

A comprehensive approach to improve ventilation for operating underground mines 41

Ventilation systems for underground trona mines 49
C. Pritchard, B. Glackin, L. Patton, L. Refsdal & R.T. Leigh

Measurement of frictional pressure differentials during a ventilation survey 59
B.S. Prosser & I.M. Loomis

Ventilation system of Pyhäsalmi mine, Finland – a case study 67
M.S. Pulkkinnen & A.L. Martikainen

A ventilation study of the Detroit Salt Mine 73
E.Z. Manos & A.M. Wala

Diesel in underground mines

Testing and reduction strategies for diesel emissions at PT Freeport Indonesia 81
I.J. Duckworth, K. Karmawan & J. Barber

Conducting a comprehensive baseline study for Diesel Particulate Matter 89
J.D. Stinnette & K.G. Wallace

Using biodiesel fuels to reduce DPM concentrations; DPM results using various blends of biodiesel fuel mixtures in a stone mine 93

Evaluation of the contribution of light-duty vehicles to the underground atmosphere diesel emissions burden 99
B. Rubeli, M. Gangal, K. Butler & W. Aldred

DPM reduction by thermal regeneration systems 109
M. Gangal, B. Rubeli, D. Young, P. Tumati & N. Birkby
CFD analysis of diesel emissions in a railroad tunnel
R.E. Ray, K. Kang & M. Gilbey

Study to assess the performance of ceramic diesel particulate filters for reducing diesel emissions
K. Fields, W. Pomroy, G. Saseen, R. Haney & M. Good

Measuring exposure to diesel engine exhaust emissions in UK coal and non-coal mines
J.R. Leeming & D.W. Dabill

Ventilation and control systems

Development of a real time airflow monitoring and control system
A.D.S. Gillies, H.W. Wu, N. Tuffs & T. Sartor

Monitoring and control of underground ventilation systems using VUMA-network
F.H. von Glehn & I. Ox

Precision gas monitoring for methane drainage
A.E. Ketter & L.E. Sargent

Continual monitoring the natural ventilating pressure in a deep coal mine
F. Kopáček, R. Ceniga & M. Tabasek

Use of a test box to measure response times for machine-mounted monitors
C.D. Taylor, J.E. Chilton & J.A. Zimmer

The early detection of spontaneous combustion and the evaluation of the effectiveness of fire extinguishing countermeasures based on CO time series data
Y. Tominaga & S. Bandopadhyay

Mine fires and explosions

Use of an inertisation unit during a coal mine fire recovery operation
J.E. Urosek, R.T. Stoltz, D.A. Beiter, G.N. Aul & T.A. Morley

Fundamental study on locating spontaneous combustion of coal by self-potential method
L. Bingrui, K. Uchino & M. Inoue

The use of blasting fumes to inertise underground coal mine atmospheres
D. Chalmers

Controlling fire and smoke movements in road tunnels by means of ventilation: state of the art
E. Jacques

Dust generation, transport and control

Evaluating ventilating air movement in underground limestone mines by monitoring respirable dust generated from production shots
G.J. Chekan, J.F. Colinet & R. Grau III

Identifying improvements for a modified wet scrubber through simplified modelling
Y.P. Chugh, K.K. Thatavarthy & R. Carty

A comparison of a directional spray system or a flooded-bed scrubber for controlling respirable dust exposures and face gas concentrations
G.V.R. Goodman, D.E. Pollock & T.W. Beck

Controlling silver dust and fumes at mine refinery
R.A. Haney & M.P. Valoski
An assessment of a two-filter concept for a continuous miner wet scrubber
Y.P. Chugh, K.K. Thatavarthy & R. Carty

Strata gas and control
Migration of carbon dioxide and methane into the atmosphere in areas of closed underground mines
T. Strumiński & B. Madeja-Strumińska

Model research into retentive reservoirs of methane in coal mines
J. Berger, W. Dziurzyński, S. Nawrat & J. Roszkowski

Natural heating and cooling of intake air passing through fragmented strata
J. Partyka & O. Johnson

Coalbed methane drainage: the past, present, and future
P.C. Thakur

Ventilation effect on radon levels in the ESF of Yucca Mountain
R. Jurani, Y.C. Yuan & P.E. Prosser

Mitigation of methane emissions from coal mine ventilation air: an update
F.P. Carothers, H.L. Schultz & C.C. Talkington

Face ventilation/case studies
How scrubbers help ventilate the face during deep cut mining with a blowing curtain
A.M. Wala, J.D. Jacob, G. Huang, J. Brown & L. Rangubhotla

Development of an assessment tool to minimize safe after blast re-entry time to improve the mining cycle
A.D.S. Gillies, H.W Wu & D. Shires

The use of large axi-vane fans in auxiliary ventilation for multiple headings in a dieselised hot metal mine
K.R. Mutama

Estimation of thermal environment conditions in a heading face ventilated by forcing system
M. Inoue, K. Uchino & Y. Kusaba

Auxiliary ventilation operation practices
E. De Souza

Raising the bar of ventilation for large-opening stone mines
R.H. Grau III, S.B. Robertson, R.B. Krog, G.J. Chekan & T.P. Mucho

2500 hp variable speed mine ventilation fan installation – P&M Coal Mining Co.
T.L. Sartain & T.E. McDaniel

Advances, modeling and software
A computer software program that estimates air quantity requirements in large opening stone mines
S.B. Robertson, R.H. Grau, J. Dolgos & T.P. Mucho

The application of mining industry ventilation survey techniques to a complex computational fluid dynamics analysis
K.H. McDaniel, N. Shahcheraghi & K.G. Wallace
Filtered recirculation – a critical component to maintaining acceptable air quality in enclosed cabs for surface mining equipment
A.B. Cecala & J.A. Zimmer

Development of a wettability test for assessing effectiveness of surfactants for dust control
Y.P. Chugh, K.K. Thatavarthy, A. Patwardhan & R. Carty

The benefits of replacing the diesel engine with a fuel cell in underground mining production equipment
S. Hardcastle, C. Kocsis, M. Bétournay & D. Barnes

The impact of changing employment and mining practices on the mine ventilation profession in Australia
R. Brake & T. Nixon

Studies of air leakage in underground mines using CFD
F. Calizaya, I.J. Duckworth & K.G. Wallace

Real-time neural network application to mine fire – nuisance emissions discrimination

Ventilation savings with fuel cell vehicles
G. Righettini & P. Mousset-Jones

Case studies from application of numerical simulation software to examining the effects of fires on mine ventilation systems
H.W. Wu, A.D.S. Gillies & A.M. Wala

A statistical approach to coal dustability
I.G. Ediz, S. Yuvka & D.W. Dixon-Hardy

Evaluating factors affecting the performance of three axis ultrasonic anemometers
C. Taylor, E. Chilton, L. McWilliams & M. Senk

Prediction of shock loss at splits in mine airways – a computational and experimental assessment
R.K. Jade & B.S. Sastry

Case studies

Ventilation improvement at Mimosa’s Mine 3 in the Sabinas Coal Basin, Coahuila, Mexico
J.R.P. Aguirre

New techniques versus experience: a real case of mine ventilation analysis
J. Toraño, R. Rodriguez & J.M. Rivas

Preliminary ventilation design for the Grasberg block cave mine
I.J. Duckworth, K. Karmawan & T. Casten

Revision of the ventilation system in Louhi mine – a case study
A.L. Martikainen & P.S. Särkkä

Alternatives to using flame retardant belts in underground workings:
a case study at Impala Platinum
F.J. van Zyl & H. Smit

A case study on dust concentration at Guleman Kef Chromium Mine
A. Dalgic & T. Guyaguler

Author index
