# 2004 Power Systems Conference and Exposition

## Table of Contents

A Modal Analysis of a Two-Area System with Significant Wind Power Penetration  
Juan Sanchez-Gasca, Nicholas Miller and William Price ........................................... 1148

Stability Control Using Pebs Method and Analytical Sensitivity of the Transient Energy Margin  
Hongbiao Song and Mladen Kezunovic ........................................................................... 1153

Composite Neural Network Load Models for Power System Stability Analysis  
Ali Keyhani, Wenzhe Lu and Gerald T. Heydt ................................................................. 1159

Decentralized Backstepping Control of Power Systems with Observation  
Decoupled State Space Method  
Ali Karimi, Karl Schoder and Ali Feliachi ....................................................................... Paper Not Available

A Synthetic System for the Robustness Assessment of Power System Stabilizers  
Julio C. R. Ferraz, Nelson Martins and Glauco N. Taranto ............................................. 1164

### Power System Instrumentation and Measurements Poster Session B

**Chair:** Jerry Heydt, Arizona State University  
**Sponsored by:** Power System Instrumentation and Measurements

Definition and Digital Algorithms of Dielectric Loss Factor for Condition Monitoring of High Voltage Power Equipment with Harmonics Emphasis  
Qingmin Li and Tong Zhao .............................................................................................. 1171

Field Practices of UHF Technique for On-Line PD Monitoring and Site Testing of Power Transformers  
Zhiguo Tang, Chengrong Li, Xingquan Huang, Wei Wang and Yansheng Ding .................. 1176

Monitoring Power System Dynamics Based on Phasor Measurements from Demand Side Outlets Developed in Japan Western 60 Hz System  
Takuhei Hashiguchi, Yasunori Mitani, Osamu Saeke, Kiichiro Tsuji, Masahide Hojo and Hiroyuki Ukai ................................................................. 1183

A Novel Method for Removal of DC Component in Non-Sinusoidal Signals of Power Systems  
Jiekang Wu, B. T. He, Y. Hu, D. S. Luo and Y. Liang ....................................................... 1190

A Wireless Sensor Concept for Managing Electrical Distribution Networks  
Mikael Nordman and Matti Lehtonen ................................................................................ 1198

Harmonic Frequency Estimation of Power Systems  
Jiekang Wu, B. T. He, Y. Hu, D. S. Luo and Y. Liang ....................................................... 1207

Fundamental Study on Vibration Diagnosis for Turbine Generators Using Wavelet Transform  
Masatake Kawada, Koji Yamada, Katsuya Yamashita and Katsuo Isaka .......................... 1215
2004 Power Systems Conference and Exposition
Table of Contents

A Fast Algorithm for Generalized dqk Coordinate Transform
Yongjin Peng and Zheng Liu ................................................................. 1221

Power System Operations Poster Session B

Chair: Jerry Heydt, Arizona State University
Sponsored by: Power System Operations

New Real Time Market Applications at the California Independent System Operator (CAISO)
Janice Huang, Preetham Yalla, Taiyou Yong, Greg Ford and
Mark Rothleder ..................................................................................... 1228

Research on a New Compensation Mode in MV Power Network
Hongbo Lian, Weipu Tan, Wenfeng Li and Yihan Yang ......................... 1234

A Fuzzy Based Technique for Unit Commitment
C. Indhumathi, E. Latha Mercy and S. Ravichandran ........................... 1240

Bidding Market Based on Single Price Model with Network Constraints
Suguru Fukutome, Tsunehisa Wachi, Luonan Chen, Yoshinori Makino and
Gentarou Koshimizu ............................................................................. 1245

Clustering Bus Load Curves
Ricardo Menezes Salgado, Takaaki Ohishi and Rosangela Ballini .......... 1251

Operation Policies for Hydropower Systems: Using the Unsupervised SONARX
Neural Network
Rodrigo Sacchi, Adriano Carneiro and Aluizio Araujo ........................ 1257

Events Classification and Operation States Considering Terrorism in Security
Analysis
Carolina Tranchita Rativa and Alvaro Torres Macias .............................. 1265

Voltage Stability Assessment by Fast Time Domain Simulation and Interior-Point
Optimal Power Flow
Augusto de Oliveira, Djalma Fachão, Glaucio Taranto and Geraldo Torres 1272

A Probabilistic Approach of Hirschman-Herfindahl Index (HHI) to Determine
Possibility of Market Power Acquisition
Anil Kanagala, Mandhir Sahni, Siddharth Sharma, Bei Gou and Jun Yu ...... 1277

Primal and Dual Stochastic Dynamic Programming in Long Term Hydrothermal
Scheduling
Luciana Martinez and Secundino Soares ............................................. 1283

Fuzzy Logic Approach for Generation Dispatch of Electric Power System with
Conflicting Objectives
Yadwinder Brar, Jaspreet Dhillon and Dwarkadas Kothari ....................... 1289
2004 Power Systems Conference and Exposition
Table of Contents

Power System Planning & Implementation Poster Session B

Chair: Greg Welch, Triangle Power Systems Consulting, Inc.
Sponsored by: Power System Planning and Implementation

A Gap Analysis of Combined Heat and Power with Gas Turbines at Colorado State University
Wade Troxell and Patrick Dawson ................................................................. 1297

Market Oriented Planning of Power Generation Expansion Using Agent-Based Model
Edgard Gnansounou, Jun Dong, Samuel Pierre and Alejandro Quintero ............ 1306

A Practical Probabilistic Reliability Assessment Using Contingency Simulation
Nicolas Maruejouls, Vincent Sermanson, Stephen Lee and Pei Zhang ............... 1312

Reactive Power Planning Using Hybrid Evolutionary Programming Method
P. Thirunavukkarasu, V. Gopalakrishnan and R. Prasanna .......................... 1319

Probabilistic Model for Adequacy Evaluation of Electric Networks with Sizeable Wind Power Generation
Paola Bresesti, Roberto Calisti, Dario Provenzano, Andrea Vaiani and Bruna Zecca ................................................................. 1324

Unit Commitment by Genetic Algorithms
Vellingiri Shanthi and Ebenezer Jeyakumar ................................................. 1329

Reliability Cost-Benefit Assessments in Urban Distribution Systems Planning
Ali Chowdhury and D.E. Custer ........................................................................... 1335

A MATLAB-Based Power Generator Maintenance Scheduler
Sanjay Bahadoorsingh and Chandrabhan Sharma ........................................ 1344

Merchant Transmission and the Reliability of the New York State Bulk Power System - Part I: Thermal Transfer Limit Analysis
Mahmoud Elfayoumy, Ramon Tapia and Roger Clayton ............................. 1349

Dimensioning of Distribution Networks with Dispersed Energy Resources
Antje Orths, Zbigniew Styczynski and Olaf Ruhle ...................................... 1354

Non-Traditional Planning for Non-Traditional Times: Just What Should Planners Minimize?
H. Lee Willis ........................................................................................................ 1359
Utility Experience Computing Physical and Operational Margins: Part II – Application to Power System Studies

How to Consider Reliability Aspects in the Energy Management of the Brazilian Hydro Dominated System
Luiz Pilotto, Xisto Vieira Filho, João Carlos O. Mello, Francisco Arteiro de Oliveira, Marco Aurélio Vieira and Armando M. Oliveira ........................................ 1372

Sebastien Henry, Jean Pompée, Louis Devatine, Mireille Bulot and Keith Bell ........................................................ 1380

Load Pocket Forecasting Software
Eugene Feinberg, Dora Genethliou, Janos Hajagos, Bryan Irrgang and Richard Rossin ........................................................ 1386

Optimal Location of the Unified Power Flow Controller in Electrical Power Systems
Hany Abdelsalam, Gamal Aly, Mostafa Abdelkrim and Kamal Shebl ........................................................ 1391

Surge Protective Devices Poster Session B
Chair: Jerry Heydt, Arizona State University
Sponsored by: Surge Protective Devices
New Distribution Class Arrester Ground Lead Disconnector Design Enhances Detonation Reliability and Improves Arrester Performance
Dennis Lenk ........................................................ 1397

Transformers Poster Session B
Chair: Jerry Heydt, Arizona State University
Sponsored by: Transformers
Experimental Investigation of Internal Short Circuit Faults Leading to Advanced Incipient Behavior and Failure of a Distribution Transformer
Karen Butler-Purry, Mustafa Bagriyanik, Peter Palmer-Buckle and Mirrasoul Mousavi ........................................................ 1407

Transformer Tap Changing by Data Classification Using Artificial Neural Network
Fakhrul Islam, Joarder Kamruzzaman and Guojun Lu ........................................................ 1417
# 2004 Power Systems Conference and Exposition

## Table of Contents

### Transmission and Distribution Poster Session B

**Chair:** Gene Wolf, Public Service Company of New Mexico  
**Sponsored by:** Transmission and Distribution

- The Improved Clonal Genetic Algorithm and Its Application in Reconfiguration of Distribution Networks  
  Ji Wang, An Luo, Mingjun Qi and Maojun Li ........................................... 1423

- A Practical Approach of Instantaneous Power to Control the Unbalanced and Non-Sinusoidal Three Phase System  
  Khaled Sedraoui ................................................................. 1429

- Dual Tabu Search for Capacitor Control in Distribution Systems  
  Hiroyuki Mori and Yoshinori Iimura ........................................... 1434

- Modeling and Control of Zero-Sequence Current of Parallel Three-Phase Converters Using MATLAB/Power System Blockset  
  Moleykutty George and Chan Lan Seen ........................................ 1440

- Mathematical Modeling of a Synchronous Motor and Centrifugal Pump Combination in Steady State  
  Petro Gogolyuk, Vladyslav Lysiak and Ilya Grinberg ........................... 1444

- Dynamic Game Theory Model for the Power Transmission Grid  
  Afshin Salehian ................................................................. 1449

- Short-Term Forecasting of Municipal Load Through a Kalman Filtering Based Approach  
  Massimo Gastaldi, Regina Lamedica, Annamaria Nardecchia and Alberto Prudenzi ........................................... 1453

- A Dispatch Strategy for an Interline Power Flow Controller Operating at Rated Capacity  
  Xuan Wei, Joe Chow, Behruz Fardanesh and Abdel-Aty Edris .................... 1459

- Digital Power Conversion System Based on a Sigma-Delta Modulator Linear Model  
  Giuseppe Capponi, Patrizia Livreri, Giuseppe Maria Di Blasi and Filippo Marino ........................................... 1467

- A Modified Harmonic Current Vector Method for Harmonic Contribution Determination  
  Bostjan Blažič, Tomaz Pflajfar and Igor Papić ................................... 1470

- Selecting a Fuzzy Aggregation Operator for the Multi-Criteria Fault Location Problem  
  Jun Li, Karen Butler-Purry, Carl Benner, B.D. Russell and Reza Langari .......... 1476
## Table of Contents

Design of UPFC Controllers for a Multimachine System  
Mohanlal Kothari and Neelima Tambey .................................................. 1483

Construction of Representative Networks Considering Investment Scenarios  
Based on Reference Network Concept  
Koji Kawahara, Goran Strbac and Ron Allan ........................................ 1489

Power Quality Problem Classification Using Wavelet Transformation and  
Artificial Neural Networks  
Worapon Kanitpanyacharoean and Suttichai Premrudeepreechacharn .................. 1496

Fuzzy Recognition System for Power Quality Events Using Spline Wavelet  
Samudi Chandrasekar, Latha Mercy and S. Arumugam ................................ 1502

Contingency Ranking for Voltage Stability Analysis of Large-Scale Power  
Systems  
Majid Poshtan, Parviz Rastgoufard and Brij Singh .................................. 1506

Application of Intelligent Control Agents in Power Systems with Distributed  
Generators.  
Amer Al-Hinai and Ali Feliachi ................................................................. 1514

### Panel Sessions

**Panel 1: Market Monitoring, Metrics, Indicators, and Mitigation - Tracks 2 & 3**

Chair: B. Hobbs, The Johns Hopkins University  
Co-Chair: S. Ellis  
Sponsored by: Power System Analysis, Computing and Economics

Conduct and Impact vs. State of the Market Triggers for Automatic Market  
Mitigation  
Shmuel Oren ................................................................. 1520

Self-Regulating Markets for Electricity: Letting Customers into the Game:  
Richard Schuler ................................................................. 1524

Electricity Market Power: Triangulation of Models and Issues  
William Hogan ................................................................. 1529

An Auction to Procure Capacity in a Load Pocket  
Joseph Bowring, Peter Cramton and Steven Stoft .................................. 1531

Energy Market Monitoring and Mitigation: Past Lessons and Current Issues  
A. Farrokh Rahimi ................................................................. 1534

Experiences with Market Power Mitigation  
Harry Singh ................................................................. 1537
Panel 2: Simulation Tools for Energy Market and Physical System Operation - Tracks 1, 2, 3 & 5

Chair: Steve Widergren, Pacific Northwest National Lab
Sponsored by: Power System Analysis, Computing and Economics

Simulating Price Responsive Distributed Resources
Ning Lu, David Chassin and Steve Widergren .......................................................... 1538

Alternative Model for Area Price Determination in a Deregulated Power System
Kjetil Uhlen, Ove S. Grande, Ian Norheim, Leif Warland and Gerd Solem .................. 1544

Visualization Approaches Integrating Real-Time Market Data
Mark Laufenberg ........................................................................................................ 1550

Transmission Expansion in the Western Interconnection - The Planning Process and the Analytical Tools that Will Be Needed to Do the Job
Glenn Drayton, Michael McCoy, Mario Pereira, Edward Cazalet, Mary Johannis and Dennis Phillips ................................................................. 1556

PowerWeb: A Tool for Evaluating Economic and Reliability Impacts of Electric Power Market Designs
Ray Zimmerman and Robert Thomas ................................................................. 1562

Panel 3: Issues Affecting Large RTOs in National Energy Markets - Tracks 2 & 3

Chair: Greg Welch, Triangle Power Systems Consulting, Inc.
Sponsored by: Power System Planning and Implementation

The Value of Large Regional Transmission Organizations
Kevin Kelly .................................................................................................................. 1568

Operational Tools for Large RTOs: Assessment and Needs
Sakis Meliopoulos ...................................................................................................... 1570

Regional/National Transmission System: Investor Owned Utility Perspective for the IEEE Power Engineering Society
Andrew Dearman III ................................................................................................ 1575

The Perspective of a Regional Transmission Company in a Competitive Energy Market
Jose Delgado ................................................................................................................ 1577

PJM - MISO Congestion Management Process
Thomas Bowe, Thomas Mallinger, Andrew J. Rodriguez and David Zwergel ............ 1582

Transmission Investment Within RTOs Participating in Energy Markets
Paul McCoy .............................................................................................................. 1588
Panel 4: Model-Driven Integration Techniques and Standards for Enterprise Integration - Tracks 1 & 4

Chair: Terry Saxton, Xrensible Solutions
Sponsored by: Power System Analysis, Computing and Economics

Key Drivers and Challenges for Moving Toward a Model-Driven Integration Solution for an Established RTO
  Heather Forsythe ................................................................. 1590

Utility Applications Should Be Integrated with an Interface Based on a Canonical Data Model, Not Directly with Each Other
  Greg Robinson and Joe Zhou .................................................. 1592

NYISO Experience with Model Driven Integration
  Walter Pfuntner ................................................................. 1597

MDI: A Solution for Outage Management
  Dean Hengst ........................................................................... 1599

An Integrated Approach to Business Modeling, Vocabulary Management, and Software Development
  Kenneth Newberry ................................................................. 1601

Panel 5: Challenges in Power System Infrastructure Security and Defense - Tracks 4 & 5

Chair: Massoud Amin, University of Minnesota
Sponsored by: Power Engineering Education

Challenges in Power System Infrastructure Security and Defense
  Massoud Amin, David Hawkins, Carson W. Taylor, Thomas Kropp, Jeffery Dagle, Chen-Ching Liu, Hao Li and Miroslav Begovic ................................................................. 1602

Risk Assessment Methodologies: Factors to Consider
  Jeffery Dagle ........................................................................... 1608

Infrastructure Security - Recent and Ongoing Work at EPRI
  Thomas Kropp and Scott Mix ................................................... 1609

BPA's Wide-Area Stability and Voltage Control System (WACS) for Blackout Prevention
  Carson Taylor ........................................................................ 1610

California ISO Reliability Tools
  David Hawkins, Yuri Makarov, Philip Hsiang, Mike Starr and Carlos Martinez ............................................................... 1611

Trends in Power System Wide Area Protection
  Miroslav Begovic ..................................................................... 1612
Panel 6: Market Clearing Mechanisms - Track 3

Chair: Alex Papalexopoulos, ECCO Int'l
Sponsored by: Power System Analysis, Computing and Economics

Market Clearing Prices in the Balancing Mechanism of England and Wales
Daniel Kirschen and Maria Garcia ................................................................. 1614

When Is a Pay-as Bid Preferable to Uniform Price in Electricity Markets
Shmuel Oren ........................................................................................................ 1618

Alternative Pricing Rules
Peter Cramton .................................................................................................... 1621

PowerWeb Testing of Various Auction Clearing Mechanisms for Electricity
Robert Thomas, Timothy Mount and Ray Zimmerman .................................... 1624

Market Clearing Mechanisms in Incomplete Markets: Excluding Importers from
Competitive Electricity Pricing
Judith Cardell .................................................................................................... 1631

Panel 8: Transformational Communications and Control Programs - Track 1 & 4

Chair: Eric Lightner, DOE
Sponsored by: Power System Analysis, Computing and Economics

IEA Demand Response Resources Project
Ross Malme ........................................................................................................ 1635

Implementing IEEE 1547 as an Interconnection Standard in PJM
Bradley Johnson .................................................................................................. 1641

MultiSpeak®2 - A Framework for Real-Time Utility Software Integration
Gary McNaughton and Martin Gordon .............................................................. 1645

Developing an Integrated Energy and Communications Systems Architecture: The
Initial Steps
Joseph Hughes and Donald Von Dollen ............................................................ 1651

Transforming the U.S. Electricity System
Robert Pratt ........................................................................................................ 1655

Panel 9: The Real-Time Stability Challenge - Track 3

Chair: Savu C. Savulescu, Energy Concepts International Corporation
Sponsored by: Power System Dynamic Performance

A Metric for Quantifying the Risk of Blackout
Savu Savulescu .................................................................................................... 1661
2004 Power Systems Conference and Exposition
Table of Contents

Preventive vs. Emergency Control of Power Systems
Louis Wehenkel and Mania Pavella ................................................................. 1665

Extending EMS Capabilities to Include Online Stability Assessment
Rene Avila-Rosales, Jay Giri and Rafael Lopez ............................................. 1671

Critical Requirements for Successful On-Line Security Assessment
Kip Morison, Lei Wang, Prabha Kundur, Xi Lin, Wenjian Gao, Chaoyang He, Feng Xue, Jainbing Xu, Taishan Xu and Yusheng Xue ........................................... 1676

Panel 10: Least Cost Planning for Non-Traditional Distribution Systems -
Track 2
Chair: Richard E. Brown, KEMA
Sponsored by: Power System Planning and Implementation

Asset Management, Risk, and Distribution System Planning
Richard Brown and John Spare ........................................................................ 1681

A Least Cost Planning Method of FRIENDS
Koichi Nara ........................................................................................................ 1687

Distribution Vision 2010: Planning for Automation
Russell Fanning .................................................................................................. 1692

Including Distributed Resources in Distribution Planning
Roger Dugan and Snuller Price ......................................................................... 1694

Distribution Circuit of the Future at Southern California Edison
Russell Neil .......................................................................................................... 1699

Panel 11: Operating GENCO Assets in New LMP Markets - Tracks 1 & 2
Chair: Khai Le, PCI
Sponsored by: Power System Operations

Optimizing Genco Assets in New LMP Markets
Khai Le .............................................................................................................. 1701

Transitioning the ERCOT Market from a Zonal to a Nodal Model
Marguerite A. Wagner ....................................................................................... 1703

Challenge of Managing Merchant Assets in a Dramatically Changed Market
Environment
Gary Stephenson ............................................................................................... 1705

Building IT Infrastructure for Market Players in Japan
Marta Marmiroli and Takayuki Nagase .............................................................. 1707
Table of Contents

A View from "The Operating Room"
Ziad Alaywan and J. McIntosh ................................................................. 1709

Panel 12: T&D System Asset Management - Track 2

Chair: ML Chan, KEMA
Sponsored by: Power System Planning and Implementation

Asset Management Challenges in Hydro One
Ravi Seethapathy ................................................................. 1728

Transmission and Distribution System Asset Management
M.L. Chan ................................................................. 1729

Avoiding Catastrophic Faults Through Improved Data Correlation
William Shaw ................................................................. 1731

Data Usage from Relays/IED's for Asset Management Solutions
John Redmon ................................................................. 1733

Asset Management-Computerized Maintenance Management Systems
Richard Wernsing and Rodney Dickens ................................................................. 1735

A Data Mining Based Maintenance Decision Support System for Electric Utilities
Zhenyuan Wang ................................................................. 1737

Panel 13: Future Power Delivery Options for Long-Term Energy Sustainability - Tracks 2 & 4

Chair: Thomas J. Overbye, University of Illinois at Urbana-Champaign
Co-Chair: S. S. Venkata, Clarkson University
Sponsored by: Power Engineering Education

Future Power Delivery Options for Long-Term Energy Sustainability
Thomas Overbye and S.S. (Mani) Venkata ................................................................. 1740

A Feasibility Analysis for the TransAmerica Grid Project (TAGG) - A National Grid Proposal
Ronald W. Spahr, Karl F. Davis and Donald L. Mundy ................................................................. 1741

The SuperCable: Dual Delivery of Hydrogen and Electric Power
Paul M. Grant ................................................................. 1745

Superconductor Technologies for a Controllable and Reliable High Capacity Grid
Alex P. Malozemoff, A. Kehrli, John Diaz de Leon II and Swarn Kalsi ................................................................. 1750
Panel 14: Real-Time Digital Simulation - Tracks 1 & 5

Chair: Mischa Steurer, Florida State University
Co-Chair: Paulo Ribeiro, Calvin College
Sponsored by: Transmission and Distribution

Real-time Simulation for Relay Performance Evaluation
Ratan Das ................................................................. 1755

FURNAS Experience on Real-Time Computer Simulations of Power Systems
Sergio Espirito Santo and Victor A. B. França........................................... 1761

Real Time Digital Simulation: Trends on Technology and T&D Applications
Marcos Roitman, Raul B. Sollero and João J. Oliveira.................................. 1767

Complexity in Power Systems and Consequences for Real-Time Computing
Stephen L. Woodruff...................................................... 1770

Panel 15: Wide Area Protection and Emergency Control Issues and Solutions -
Tracks 1, 3, 4 & 5

Chair: Damir Novosel, KEMA Consulting
Sponsored by: Power System Relaying

Wide Area Protection and Emergency Control
Miroslav Begovic ........................................................... 1776

Practical Implementation of Wide Area Disturbance Protection and Restoration
Schemes
Vahid Madani ........................................................................ 1778

Recording Requirements for Simulation and Analysis of Wide Area Disturbances
Alexander Apostolov................................................................. 1780

A Methodology to Access the Impact of Hidden Failures in Protection Schemes
Jamie De La Ree and David C. Elizondo ........................................... 1782

Wide Area Disturbances: Overall Issues and Solution and Impact of Protection
Systems
Damir Novosel ....................................................................... 1784

Hydro Quebec TransÉnergie Response to Blackouts or Catastrophic Events
Jean-Marie Gagnon ................................................................. 1786

Special Paper Session: Power Market and Economics - Track 2

Chair: Jim Waight, Siemens
Sponsored by: Power System Analysis, Computing and Economics

Regional Ancillary Services Procurement in Simultaneous Energy/Reserve
Markets
Tong Wu, George Angelidis, Ziad Alaywan and Alex D. Papalexopoulos............ 1788

xxx
Market Monitoring and SMD Implementation: the New York Experience and Beyond
   Ricardo J. Galarza ................................................................. 1794

An Oligopolistic Model for Power Networks: Beyond the Incentive of the Energy Market
   Guillermo Bautista, Victor H. Quintana and Jose A. Aguado .................. 1799

Forecasting System Imbalance Volumes in Competitive Electricity Markets
   Maria P. Garcia and Daniel S. Kirschen .......................................... 1805

Promotion of Energy-Efficiency in the Electricity Sector in Restructuring Markets - The Portuguese Case
   Ana C. Lopes and Anibal T. de Almeida ........................................... 1813
