CONTENTS

Preface v

Plenary lectures 1

E. Castellà and A. Jorba, The Lagrangian points of the real Earth-Moon system ........................................... 3
M. Golubitsky and I. Stewart, Synchrony versus symmetry in coupled cells .................................................... 13
M.D. Groves, Three-dimensional solitary gravity-capillary water waves ......................................................... 25
V. Yu. Kaloshin, Mather theory, weak KAM theory, and viscosity solutions of Hamilton-Jacobi PDE's ............. 39
P. Krejčí, An application of non-smooth mechanics in real analysis ............................................................. 49
R.S. MacKay, Chaos in three physical systems ................................................................................................. 59
J. Mallet-Paret and S.M. Verduyn Lunel, Mixed-type functional differential equations, holomorphic factorization, and applications ................................................................. 73
R. Ortega, Competitive systems with three species and periodic coefficients .................................................. 90
P. Poláčik, Asymptotic symmetry of positive solutions of parabolic equations .................................................. 99
R. Roussarie, Bifurcations of Planar vector field unfoldings ............................................................................. 109
K. Schmitt, Positivity, continuation and nonlinear eigenvalue problems ......................................................... 119
F. Takens, Time series analysis: smoothed correlation integrals, autocovariances, and power spectra ............ 128
Y. Li and Y. Yi, On Poincaré - Treshchev tori in Hamiltonian systems ............................................................ 136

Mini-symposia 153

Computational aspects of differential equations and applications (Org.: B. Krauskopf and K. Lust) 155

S. Day, O. Junge and K. Mischaikow, Towards automated chaos verification ...................................................... 157

D.J. Estep, S.M. Verduyn Lunel and R.D. Williams, *The formation of shear layers in a fluid with temperature-dependent viscosity*  169

K. Green, K. Engelborghs and B. Krauskopf, *From local to global one-dimensional unstable manifolds in delay differential equations*  175

A. Jorba and E. Olmedo, *A parallel method to compute quasi-periodic solutions*  181

H. Osinga and R. Rokni, *Numerical study of manifold computations*  190

B. van de Rotten and S.M. Verduyn Lunel, *A limited memory Broyden method to solve high-dimensional systems of nonlinear equations*  196

G. Samaey and D. Roose, *Computing connecting orbits in delay differential equations using DDE-BIFTOOL*  202

**Water waves (Org.: M. Groves and M. Haragus)**  205

A. Constantin, *Wave-current interactions*  207

G. Schneider and O. Zink, *Justification of the equations for the resonant four wave interaction*  213

B. Schweizer, *Viscous water waves in a bifurcation approach and connections to inviscid theories*  219

**Topological and variational methods (Org.: J. Mawhin)**  225

D. Bonheure, *Multitransition connections for fourth order equations with a bistable nonlinearity*  230

D. Bonheure and J.M.Gomes and L.Sanchez, *Positive solutions of a second order singular ordinary differential equation*  234

A. Cañada and D. Ruiz, *Resonant systems with periodic nonlinearity*  237

Y.A Klokov and F. Sadyrbaev, *Sharp conditions for the superlinearity of the second order ordinary differential equations*  243

A. Krasnosel'skii and D. Rachinskii, *On the number of branches of periodic solutions*  246
F.M. Minhós and A.I. Santos, Existence and non-existence results for two-point boundary value problems of higher order ........ 249
I. Rachůnková and M. Tvrdý, Method of lower and upper functions in impulsive periodic boundary value problems .............. 252
A.M. Robles-Pérez, Almost periodic solutions of forced sine-Gordon equations .................................................. 258
R. Srzednicki, Isolated sets of solutions of two-point boundary value problems and their indexes ........................................ 264
D. Ruiz, A priori estimates and existence of solutions for nonlinear problems involving the p-Laplacian .......................... 270

Qualitative theory of nonlinear parabolic and elliptic equations (Org.: H. Matano and M. Fila) 275

J.M. Arrieta and A. Rodríguez-Bernal, Ill posed problems with supercritical nonlinearities ............................................. 277
J. Eisner, M. Kučera and L. Recke, Smooth bifurcation and variation of the contact sets for an obstacle problem ......................... 281
M. Fila, H. Matano and P. Poláčik, Immediate regularization after blow-up ................................................................. 284
G.V. Grishina, Asymptotic behaviour of solutions to semilinear elliptic equations in unbounded domains .......................... 290
J.M. Arrieta, A. Jiménez-Casas and A. Rodríguez-Bernal, Flux condition induced by concentrated reactions ......................... 293
R. Ikota and E. Yanagida, Stability analysis for the curvature-driven motion of curves with triple junctions ....................... 296
B. Kawohl, Symmetry in anisotropic media .................................................. 301
M. Kučera, J. Eisner and L. Recke, Smooth bifurcation and exchange of stability for variational inequalities ...................... 307
R. Stańczy, On some elliptic equation with nonlocal nonlinearity .................. 310
M. Winkler, Nonuniqueness in strongly degenerate diffusion equations with strong absorption .................................................. 313

Around Hilbert’s 16th problem (Org.: Y. Ilyashenko, R. Roussarie and F. Dumortier) 317

M. Caubergh and F. Dumortier, The use of Melnikov functions in multi-dimensional parameter families: algebraic curves of maximal cyclicity .......................... 319
J. Chavarriga, H. Giacomini and M. Grau, *Quadratic systems with an algebraic limit cycle of degree 2 or 4 do not have a Liouville first integral* .................................................. 325

B. Coll, A. Gasull and R. Prohens, *On a criterium of global attraction for ordinary differential equations* .................. 328

I.A. García, J. Giné and H. Giacomini, *Generalized nonlinear superposition principles* ........................................ 334

I.A. García and D.S. Shafer, *Limit sets of planar vector fields and the vanishing set of inverse integrating factors* .................. 337

A. Gasull and J. Torregrosa, *Some results on rigid systems* .......... 340

M. Sabatini, *Coexistence of centers and limit cycles in Liénard systems* .................................................. 354

H. Zhu, *From the PP-graphics to the finiteness part of Hilbert's 16th problem for quadratic systems* .................. 357

*Navier-Stokes equations and reaction diffusion equations (Org.: R. Farwig and M. Wiegner)* .................. 363

H. Abels, *Reduced Stokes equations and bounded H_∞-calculus* .................................................. 365

R. Farwig, *Flow around rotating obstacles - analysis of a singular integral operator* ................................ 371

P. Kaplický, *Some remarks to regularity of flow of generalized Newtonian fluid* ........................................ 377

J. Málek, G. Mingione and J. Stará, *Fluids with pressure dependent viscosity: partial regularity of steady flows* .................. 380

V. Roussier, *Long-time asymptotics of Navier-Stokes and vorticity equations in a three-dimensional layer* .................. 386

A. Raczyński, *A singular problem with non-constant temperature - steady states* ...................................... 389

J. Saal, *The Stokes operator with Robin boundary conditions in L_∞(R^n_+)*) .................................................. 392

O. Sawada, *On analytic properties for the strong solutions to the Navier-Stokes flows* .................. 398

B. Schweizer, *A priori estimates for the Euler equation with a free boundary* .................................................. 401
Hyperbolic dynamics and beyond (Org.: M. Viana and V. Araujo) 407

J.F. Alves, K. Oliveira and A. Tahzibi, On the continuity of entropy for non-uniformly expanding maps 409

V. Araujo, Integrability versus frequency of hyperbolic times and the existence of a.c.i.m. 415

Yu. Ilyashenko, Minimal attractors 421

B. Krauskopf and H.M. Osinga, Geodesic parametrization of global invariant manifolds or what does the Equadiff 2003 poster show? 429

A. Pumariño and J.C. Tatjer, A possible new family of two-dimensional strange attractors 434

A. Tahzibi, $C^1$ generic Pesin's entropy formula 440

Symmetry and mechanics (Org.: M. Golubitsky, M. Roberts and A. Vanderbauwhede) 447

M.A.D. Aguiar, S.B.S.D. Castro and I.S. Labouriau, Switching along a network 449

M. Golubitsky and C. Alves-Pinto, Bipedal locomotion 452

S.B.S.D. Castro and A.A. du Plessis, Intrinsic complete transversals and the recognition of equivariant bifurcations 458

J. Galán-Vioque, F.J. Muñoz-Almaraz and E. Freire, Stability and bifurcation behavior of the figure eight solution of the three body problem 464

S.V. Golovin, On the group-invariant solutions of the gas dynamics equations 470

D. Gómez, M. Lobo and E. Pérez, Vibrating plates with concentrated masses and very small thickness: Low frequencies 473

H. Hanßmann and J.C. van der Meer, On non-degenerate Hamiltonian Hopf bifurcations in 3DOF systems 476

C. McCord, J. Montaldi, M. Roberts and L. Sbano, Relative periodic orbits of symmetric Lagrangian systems 482

S. Yanchuk and K.R. Schneider, Complete synchronization of symmetrically coupled autonomous systems 494
Shock waves and conservation laws (Org.: K. Zumbrun and D. Serre)

F. Berthelin and A. Vasseur, *From kinetic equations to multidimensional isentropic gas dynamics* ........................................ 499

J.-F. Coulombel and P. Secchi, *Stability of compressible vortex sheets* ........................................ 502

V.A. Galkin, *Singularities of the solution of the infinite-dimensional hyperbolic smoluchowski system describing coagulation process* ........................................ 505

J. Härterich, *Existence of rollwaves in a viscous shallow water equation* ........................................ 511

F. Rousset, *Stability of large Ekman-Hartmann boundary layers* ........................................ 520

Nonlinear elliptic partial differential equations
*(Org.: A. Ambrosetti and C. Stuart)* 523

S. Cano-Casanova and J. López-Gómez, *Permanence and segregation of species for large interactions in heterogeneous environment* ........................................ 531

S. Cingolani, *On Morse theory for a class of quasilinear elliptic equations involving p-Laplace operator* ........................................ 534

E. Colorado and I. Peral, *Some results for elliptic eigenvalue problems with moving mixed boundary conditions* ........................................ 540

R. Laister and R.E. Beardmore, *Bifurcations in degenerate elliptic equations* ........................................ 546

V. Liskevich, S. Lyakhova and V. Moroz, *Positive solutions to semilinear elliptic equations with critical lower order terms* ........................................ 549

Y. Naito, *A variational approach to self-similar solutions for semilinear heat equations* ........................................ 555

S. Stingelin, *Multiple positive solutions for the Brezis-Nirenberg problem on the sphere S^n* ........................................ 558

Z.-Q. Wang, *Minimax method, invariant sets, and applications to nodal solutions of nonlinear elliptic problems* ........................................ 561

Algebraic aspects and optimisation in dynamical systems

M. Bartkiewicz and S. Walczak, *Optimal control of systems with periodic and Dirichlet boundary conditions* ........................................ 569

R.L.M. Peeters and B. Hanzon, *Identifiability of homogeneous polynomial systems using the state isomorphism approach* 581

J.C. Willems and P. Rapisarda, *Balanced state representations from higher-order models* 587

**Case studies in theoretical interpretation of numerical experiments (C. Simó and H. Broer)** 593

K. Green and B. Krauskopf, *Sudden transitions to chaos in a semiconductor laser with optical delay* 607

A. Gaunersdorfer, C.H. Hommes and F.O.O. Wagener, *Nonlocal onset of instability in an asset pricing model with heterogeneous agents* 613

A. Jorba and J.C. Tatjer, *On the fractalization of invariant curves* 619

J. Sánchez, B. García-Archilla, M. Net and C. Simó, *Continuation of periodic orbits in large-scale dissipative systems* 625

C. Simó, *On the use of Lyapunov exponents to detect global properties of the dynamics* 631

**Infinite-dimensional dynamics (Org.: B. Fiedler and G. Raugel)** 637

I.D. Chueshov and A.M. Rekalo, *Long-time dynamics of reaction-diffusion equations on thin two-layer domains* 645

M. Georgi and N. Jangle, *Spiral wave motion in reaction-diffusion systems* 651

Z. Galias, *Krawczyk method for proving the existence of periodic orbits of infinite dimensional discrete dynamical systems* 657

H. Petzeltová, *Convergence of solutions of a non-local phase-field system with memory* 663
R. Orive, *Weakly nonlinear long-time behavior of solutions to a hyperbolic relaxation systems* 666
C. Rocha, *Transversality in semilinear parabolic equations on the circle* 672
M. Wolfrum, *The concept of adjacency for stationary and non-stationary solutions of scalar semilinear parabolic PDE* 678

**Quasiperiodicity (Org.: H. Hanßmann and H. Broer)** 685

S. Abenda and Y. Fedorov, *Integrable ellipsoidal billiards with separable polynomial potentials* 687
A. Berger, *Dynamics and digits: on the ubiquity of Benford's law* 693
H.W. Broer, V. Naudot and R. Roussarie, *Extension of catastrophe theory to Dulac unfoldings* 714
M.C. Ciocci, *Persistence of quasi periodic orbits in families of reversible systems with a 1 : 1 resonance* 720
H.S. Dumas and J.A. Ellison, *Averaging for quasiperiodic systems* 726
H. Hanßmann, *Hamiltonian bifurcations of invariant tori with a vanishing Floquet exponent* 732
A. Litvak-Hinenzon, *The mechanism of parabolic resonance orbits* 738

**Delay equations (J. Mallet-Paret and H.O. Walther)** 745

G. Derfel, *How small can a “small solution” be?* 750
T. Luzyanina and D. Roose, *Approximation of the characteristic roots of integral equations with distributed delays* 762
J. Sieber and B. Krauskopf, *Dynamics of an inverted pendulum subject to delayed control* 768
Wave stability and pattern formation (Org.: A. Doelman and B. Sandstede)

L. Brusch, H.K. Park, M. Bär and A. Torcini, *Spiral instabilities in periodically forced extended oscillatory media* ........................................ 777
A. Doelman, D. Iron and Y. Nishiura, *Edge bifurcations in singularly perturbed reaction-diffusion equations: a case study* ........ 783
F. Hamel, *Propagation phenomena for KPP-type equations in unbounded domains* ................................................................. 789
L. Malaguti, C. Marcelli and S. Matucci, *The effects of convective processes on front propagation in various reaction-diffusion equations* 795
L.M. Lerman and L.A. Belyakov, *Stationary localized solutions, fronts, and traveling fronts to the generalized 1D Swift-Hohenberg equation* ........................................................................ 801
H. Susanto and S.A. van Gils, *Semifluxons in a long Josephson junction with a π-discontinuity point* ........................................... 807
J. Wei and M. Winter, *Existence and stability of multiple spot solutions for the Gray-Scott model in \( \mathbb{R}^2 \) ........................................ 813

Nonautonomous dynamics (Org.: R. Johnson, R. Obaya, G. Sell and Y. Yi)

J. Andres, *Sharkovskii’s theorem and differential equations* .... 821
T. Caraballo and J. Real, *Asymptotic behaviour and attractors of 2D-Navier-Stokes models with delays* .......................................... 827
D. Cheban and C. Mammana, *Invariant manifolds, global attractors and almost periodic solutions of non-autonomous difference equations* 833
R. Fabbri and R. Johnson, *On a saddle-node bifurcation in a problem of quasi-periodic harmonic forcing* .................................. 839
C. Núñez and R. Obaya, *Uniform complete guiding sets for finite-delay differential equations* ......................................................... 848
J. Puig and C. Simó, *The spectrum of Schrödinger operators with quasi-periodic potential: a dynamical approach* ......................... 856

Normal forms and invariant manifolds (Org.: P. Bonckaert and F. Verhulst)

P. Bonckaert and E. Fontich, *Invariant manifolds of near rotation maps* ....................................................................................... 865
P. Collins and B. Krauskopf, *Chaotic lasers: manifolds, bifurcations and symbolic dynamics* ........................................... 871
M. Messias, *Resonances and subharmonic bifurcations of large amplitude periodic orbits of planar polynomial vector fields* ... 880

**Singular perturbations (Org.: T. Kaper, S. Szmolyan and F. Dumortier)** 887

V. Gelfreich and L.M. Lerman, *Slow manifolds in a singularly perturbed Hamiltonian system* ............................................. 889
A. Huber, *Dynamics on different time scales in the Yamada model* 895
P. De Maesschalck and F. Dumortier, *Canard solutions at nongeneric turning points* ............................................................... 898
A.I. Neishtadt, *On accuracy of the averaging method in two-frequency systems with small Hamiltonian and much smaller non-Hamiltonian perturbations* .................................................. 904
H. Oka, *Conley index theory for slow-fast systems: multi-dimensional slow manifold* .............................................................. 910
N. Popović, *A geometric analysis of the Lagerstrom model: existence of solutions and rigorous asymptotic expansions* ........ 916
B. Schmalfuss and K.R. Schneider, *Existence of a slow invariant manifold for a class of random differential equations with two time scales* ................................................................. 919
E.V. Shchetinina, *Loss of stability scenario in the Ziegler system* . 922
M. Wechselberger, *Poincaré maps for relaxation oscillations in \( \mathbb{R}^3 \)-invariant manifolds, canards and turning points* .......... 925
W. Weckesser, *Canards and horseshoes in the forced van der Pol equation* ................................................................. 931

**Differential geometric foliations and flows (Org.: J. Sotomayor)** 937

R. Garcia, L.F. Mello and J. Sotomayor, *Principal mean curvature foliations on surfaces immersed in \( \mathbb{R}^4 \) ...................................... 939
L. F. Mello, *Line fields on surfaces immersed in \( \mathbb{R}^4 \) .................................................. 951
B. Smyth, *The nature of elliptic sectors in the principal foliations of surface theory* ................................................ 957
Homoclinic and heteroclinic dynamics (Org.: H. Kokubo and A.J. Homburg) 961

A.J. Homburg and J. Knobloch, Bellows bifurcating from degenerate homoclinic orbits in conservative systems 963

C.A. González, Topological classification for multiple saddle-connections 972

S. Ibáñez and J.A. Rodríguez, Shil’nikov homoclinic orbits in the unfolding of a codimension-3 singularity 975

T. Wagenknecht, The reversible homoclinic pitchfork bifurcation revisited 978

K. Yagasaki, Detection of homoclinic and heteroclinic behavior in Hamiltonian systems with saddle-centers 984

Mathematical aspects of celestial mechanics (Org.: A. Albouy and R. Moeckell) 991

M. Hampton, Co-circular central configurations in the four-body problem 993

T. Kapela, N-BODY choreographies with a reflectional symmetry – computer assisted existence proofs 999

R. Martínez, A. Samà and C. Simó, Stability of homographic solutions of the planar three-body problem with homogeneous potentials 1005

D. Offin and J. Grand’maison, Symmetric periodic orbits in the isosceles three body problem 1011

Contributed talks 1019

A.B. Alshin, M.O. Korpusov, Yu.D. Pletner and A.G. Sveshnikov, New Sobolev equations and dynamical potentials 1021

A.B. Alshin, E.A. Alshina and N.N. Kalitkin, Application of quasi-uniform grids for numerical solution of initial-boundary value problems in unbounded domain 1024

F.M. Atay, Stability of coupled delay differential equations near Hopf bifurcation 1027

A. Afendikov, Properties of 2D Navier-Stokes flow in infinite strip for spatially non-decaying initial data 1030
A. Boichuk, Perturbed Fredholm BVP's for delay differential systems
M. Camarinha and L. Abrunheiro, Cubic polynomials on SO(3)
N. Chernyavskaya and L. Shuster, On a problem of Hartman-Wintner for difference equations
T. Caraballo, P. Marín-Rubio and J. Valero, Attractors of delayed differential equations without uniqueness
P.S. Casas and A. Jorba, Unstable manifolds computation for the two-dimensional plane Poiseuille flow
A. Cernea, Some qualitative properties of solutions to nonconvex hyperbolic differential inclusions
Y. Cheng and L. Wang, Remarks on bifurcation in elliptic boundary value problems
J.I. Diaz and L. Tello, On a parabolic problem with diffusion on the boundary arising in climatology
A. Domoshnitsky, On stability of nonautonomous integro-differential equations
A.A. Egorov, Stability of classes of solutions to partial differential relations constructed by quasiconvex functions and null lagrangians
J.Z. Farkas, Stability of equilibria of a non-linear population dynamical model
V.A. Gaiko and W.T. van Horssen, Global analysis of a canonical cubic system
H. Gilsing, On $L^p$-stability of numerical schemes for linear stochastic delay differential equations
M. Guzmán-Gómez, Asymptotic behavior of solutions to the Zakharov system
S.C. Hille, Review of mathematical modelling in the study of collective movement of Dictyostelium discoideum
J. Horák, Constrained mountain pass algorithm
