Topic 04
Architecture and Design, Day Lighting

Innovative Bidirectional Video-Goniophotometer Combining Transmission and Reflection Measurements
Marilyne Andersen .....................................................2-149

The Tales of Three Museums
Liliana Beltran ...........................................................2-158

A Survey of Contrast Reducing Materials and Methods
Regina Bokel ...............................................................2-168

World Wide Best Practices for Building Integration of Solar Heating Systems
Lex Bosselaar ...............................................................2-175

Daylight in Underground (Exposition) Spaces
Truus (G.J.) de Bruin-Hordijk .........................................2-180

Advanced Solar Facades with Integrated Collectors-Accumulators for Domestic Hot Water and Space Heating Applications
Debora Faggembaau ....................................................2-190

A Mediterranean House Designed with the Whole Building Approach
Patricia Ferro ...............................................................2-200

Design, Building Integration and Performance of a Hybrid Solar Wall Element
Andreas Fieber .............................................................2-209

Extending the Skylight-Dimensioning Method
Levente Filetoth ............................................................2-219

A New Perspective for the Concept of the Discomfort Glare Index
Sebastian Goelz .............................................................2-229

Case Study of a Not-So-Ordinary Building - The Cowra Shire Administration Building ESD Refurbishment
Mahalath Halperin .........................................................2-236

Proven Designs for Very Low Energy Housing - Swiss Experience
Robert Hastings ............................................................2-243

Natural Ventilation for Controlling the Indoor Microclimate
Francesco Iannone ..........................................................2-251

A Comparative Analysis of Sustainable Buildings and Projects
Demet IRKLIER YILDIZ ....................................................2-260

Natural Ventilation in Buildings - Architectural Concepts, Consequences and Possibilities
Tommy Kleiven .............................................................2-271

Use of Solar Volume in Design of Site Layout
Ziva Kristi .................................................................2-280

Contemporary vs. Traditional vs. Solar Houses
Petros Lapithis ..............................................................2-287

Volume 2

Microencapsulted Phase Change Materials Integrated into Construction Materials
Peter Schossig ........................................ 2-413

Thermal Performance of Historical Buildings: A Case Study of Lucknow
Anupama Sharma ........................................ 2-422

Structural Effects on Daylighting
Friedrich Sick ........................................ 2-431

Use of Vegetation to Reduce Overheating in Singular and Conventional Buildings - GREENFACADE Project
Manel Soria ........................................ 2-439

Tropical House Design: Active, Passive or Both?
Rosangela Tenorio ........................................ 2-446

Analysing Sources of Error in Building Daylighting Performance Assessment by Comparison of Test Modules and Scale Models
Anothai Thanachareonkit ........................................ 2-454

Daylight Simulations with Advanced Software Tools: The Case Study of a University Library in Pisa
Giuseppe Tuoni ........................................ 2-463

Sun-Protecting and Light-Redirecting Glazing Based on Cylinders
Stephan Vidi ........................................ 2-473

Combination of microstructures and optically functional coatings for solar control glazing
Günther Walze ........................................ 2-481

LACASA - An Instrument for the Energetic Analysis and Optimization of Buildings Including Technical Equipment
M. Werner ........................................ 2-489

Evaluation of Models for the Angular Variation of Solar Absorptance In Windows
Anna Werner ........................................ 2-495

On the Evaluation of Visual Performances of Obstructed Glass Panes
Michele Zinzi ........................................ 2-505
Volume 2

Topic 05

Advanced Technological Solutions for Building Load Reduction in the Sino-Italy Environment and Energy Building (SIEEB)
Rajendra Singh Adhikari .......................................................... 2-514

Preliminary Study of Small Scale Solar Test Cells for Solar Thermal Evaluation of Building Components
Gabriela Alvarez-Garcia .......................................................... 2-522

Investigation of the Performance of a Double Skin Facade with Integrated Photovoltaic Panels
Andreas K. Athienitis ............................................................ 2-529

Analysis of a Combined System of a Earth-Heat-Exchanger and a Heat Pump
Klaus Brinkmann ................................................................. 2-537

Innovative Commercial Buildings in Upper Austria
Christiane Egger ................................................................. 2-546

Development of a High Energy Density Sorption Storage System
Günter Gartler ................................................................. 2-550

Microencapsulated Paraffin Phase-Change-Slurries
Stefan Gschwander .......................................................... 2-560

Electrosorption Phenomena in Layers of Shield-Vacuum Heat Insulation of Hydrogen Reservoirs in Emergency Operating Conditions
Alexander Leonidovich, Gusev ........................................... 2-567

The Combination of Solar Thermal Collectors and Heat Pumps in a Compact Unit for Passive Houses
Bernd Hafner ................................................................. 2-587

Solar Utilization in Low-Energy Buildings
Frank-Dietrich Heidt .......................................................... 2-591

Summer 2003: Impacts on the Design of Active and Passive Cooling
Sebastian Herkel ................................................................. 2-600

Studies of a Heat Pump Using Dual Heat Sources of Solar Heat and Ambient Air
Sadasuke Ito ................................................................. 2-609

Application of Dynamic Analysis to Obtain the U Value of the Main Walls of a Mono-Zone Building, from In-Situ Measurements
Maria José Jiménez .......................................................... 2-616

Solar Design Aspects of the Renewable Energy Centre and Interim Findings
David Lloyd Jones .......................................................... 2-622

Solar Roof Spanisko-Croatia
Ljubomir Majdandzic .......................................................... 2-631
