CAISE’04 WORKSHOPS

Knowledge and Model Driven Information Systems Engineering for Networked Organisations

The 16th Conference on Advanced Information Systems Engineering
Riga, Latvia, 7 – 11 June 2004

Workshop proceedings
Volume 2
Brief contents

Preface ............................................................................................................. III

DIQ’04 .............................................................................................................. 1

BPMDS’04 ....................................................................................................... 125

AOIS’04 ......................................................................................................... 259

Authors Index ................................................................................................. 399
Contents

Preface ........................................................................................................ III

DIQ’04 ........................................................................................................ 1

DIQ’04 Preface .......................................................................................... 3

Invited presentation

Data Quality in Practice @ SAP AG – an enterprise wide approach................. 7
M. Goerk

Regular papers

Information Quality: The central role of Categorization and Context.................. 11
P. R. Duimering, A.K.P. Wensley

Relevance as an Information Quality Problem in Corporate Decision-Making
Processes ........................................................................................................ 25
M. Rese, G. Graefe, V. Herter

Models for Data Quality Management ................................................................ 37
A. T. Berztiss

A formulation of the data quality optimization problem in Cooperative
Information Systems ....................................................................................... 49
A. Avenali, P. Bertolazzi, C. Batini, P. Missier

Does Higher Data Accuracy Produce Higher Prediction Accuracy? ................... 65
I. Askira Gelman, D. Pingry, D. Zeng

Quality-driven Query Processing of XQuery Queries ........................................ 78
D. Milano, M. Scannapieco, T. Catarci

An Architecture to support Data Quality Management ........................................ 90
C. Cappiello, C. Franchalanci

The quality of automated and manual data collection processes in Java software:
an empirical comparison ............................................................................... 101
R. Najjar, S. Counsell, G. Loizou, Y. Hassoun

An actor-network theory perspective on Data quality in medical practices .......... 113
R. de la Harpe, J.D. Roode
BPMDS’04 ................................................................. 125

BPMDS’04 Preface ....................................................... 127

Introductory note

Remaining Fit: On the Creation and Maintenance of Fit .................................. 131
Gil Regev and Alain Wegmann

Regular papers

Measurement of fit and misfit

Business Alignment: Using Process Mining as a Tool for Delta Analysis ............... 138
W.M.P. van der Aalst

Impact Analysis for Supporting the Co-Evolution of Business Processes and Supporting Software Systems ............................................................. 146
Thierry Bodhuin, Raffaele Esposito, Cristina Pacelli and Maria Tortorella

Business process architecture for creation and maintenance of fit

The Primacy of Process Architecture .................................................................. 154
Stewart Green and Martyn Ould

Basic Notions Regarding Business Processes and Supporting Information Systems ......................................................................................... 160
Jan L.G. Dietz

Multi-Paradigm Process Management ................................................................ 169
Michael zur Muehlen and Michael Rosemann

Network-based Business Process Management: a Discussion on Embedding Business Logic in Communications Networks ...................................... 176
L-F Pau and P.H.M. Vervest

Maintenance of fit in face of change

Office Activity Procedure Exception Handling Realization Difficulties .................. 184
Dovilé Vojevodina and Genadijus Kulvietis

A Conceptual Framework for Intention Driven Flexible Workflow Modeling ...... 192
Selmin Nurcan

Analyzing the Scope of a Change in a Business Process Model .......................... 200
Pnina Soffer

The Value of Roles in Modeling Business Processes .......................................... 207
Pavel Balabko, Alain Wegmann, Alain Ruppen and Nicolas Clément
Creation and maintenance of fit with respect to stakeholders

A Better Fit – Characterising the Stakeholders ...........................................215
Ian F. Alexander

A Coordination Approach Towards Alignment .............................................224
Lars Taxén

Introduction of BPS Systems into Operational Practice:
Achievements and Setbacks .................................................................232
Tomas Andersson, Ilia Bider and Rogier Svensson

Mobile Process Service as an Innovation ..................................................240
Brian Keedwell

Short papers

A Motivation for Multiple Activity Instantiation in BPEL4WS Processes ........245
Jan Mendling, Mark Strembeck and Gustaf Neumann

Renate Sprice and Uldis Eihenbergs

Change Management Framework for Business Processes .............................250
Janis Maknia

Brainstorming sessions

Fit Measurement: How to Distinguish Between Fit and Misfit ........................253
Pnina Soffer

Adequacy of Business Process Modeling Techniques and Stability of Models with Respect to Changes in Business Reality ......................................................255
Ilia Bider

Mutual Influences between Business Processes, BPS Systems and Stakeholders .257
Gil Regev

AOIS’04........................................................................................................259

AOIS’04 Preface ..........................................................................................261

Theoretical foundations

On the ontological foundations of agent concepts ......................................265
G. Guizzardi and G. Wagner

Extending (Object-)Z for multi-agent systems specification ........................280
A.A.F. Brandão, P. Alencar and C.J.P. de Lucena
Using ontologies for the specification of domain-specific languages in multi-agent domain engineering ................................................................. 295
R. Girardi and I. Serra

Applications
On the incorporating of learning in open multi-agent systems: a systematic approach ................................................................. 309

Using goal/strategy/maps to reduce the language disparity issue in ERP projects ................................................................. 325
I. Zoukar and C. Salinesi

Web interface between users and a centralized Information Multi-Agent System ................................................................. 340
E. Adam and R. Mandiau

Methodologies
Agents to foster conscious design and reuse in architecture ................................................................. 355
D. Pinho, A.S. Vivacqua, S. Palma and J.M. de Souza

Incorporating elements from the Prometheus agent-oriented methodology in the OPEN Process Framework ................................................................. 370
B. Henderson-Sellers, Q.-N.N. Tran and J. Debenham

A preliminary comparative feature analysis of multi-agent systems development methodologies ................................................................. 386
Q.-N.N. Tran, G. Low and M.-A. Williams

Authors Index ........................................................................................................................................... 399
