Pipeline Technology Conference

9 - 13 May, 2004
Ostend, Belgium

Volume 2
Session 1: KEYNOTE LECTURES

Improving long distance gas transmission economics:
X120 development overview
C.W. Petersen, K.T. Corbett, D.P. Fairchild, S. Papka, and M.L. Macia,
ExxonMobil Upstream Research Co, Technology Applications Division,
Houston, USA

Application of X80 in Japan: summary
T. Masuda, Pipeline Dept., Tokyo Gas Co. Ltd, Tokyo, Japan
T. Watanabe, N. Hagiuara, H. Yatabe, S. Kawaiuchi, H. Motohashi, and
N. Fukuda, Pipeline Technology Center, Tokyo Gas Co Ltd, Yokohama, Japan

The situation of advanced grade pipe steel in China
Y. Wang, Institute of Metal Research, Chinese Academy of Science (CAS),
Shenyang, PR China
J. Pan, Pipeline Bureau, China National Petroleum and Gas Company
(CNPC), PR China

Dealing with present contracting philosophies of the oil and gas companies
E. P. Heerema, Allseas Group SA, Chatel-St-Denis, Switzerland

Session 2: PLASTIC DESIGN 1

Yield strength and plasticity of high strength linepipe
A. Glover and B. Roithwell, TransCanada PipeLines Ltd, Calgary, Canada

Ductile fracture behavior of girth welded joints and strain based design for high strength linepipes
N. Ishikawa, S. Endo, and S. Igi, Steel Research Laboratories, JFE Steel Corporation, Fukuyama, Japan
A. Glover and D. Horsley, TransCanada PipeLines Ltd, Calgary, Canada
M. Ohaia and M. Toyoda, Graduate School of Engineering, Osaka University, Osaka, Japan

A plastic collapse solution for API 5L X65 gas pipeline
J.-H. Baek and W.-S. Kim, Research and Development Centre, Korea Gas Corporation, Ansan, Korea
J.-B. Choi, School of Mechanical Engineering, Sungkunkwan University, Suwon, Korea
Session 3:  LASER WELDING – LAWPIPET PROJECT ............... 115

Longitudinal welding by laser and/or plasma-laser process of high grade pipelines up to 16 mm thick for energy transport .......... 117
C. Vigreux, J. Claey's, A. Ihasn Koruk, Innovation R&D Arcelor, France
F. Briand, Air Liquide, Cergy-Pontoise, France
J.P. Mas, J.Y. Goalabre, Saipem SA St. Quentin Yvelines, France
A. Tazedakis, Corinth Pipeworks, Domvrema, Greece
C. Gérardin and A. Chehaibou, Institut de Soudure, Yutz, France
R. Denys, A. Lefevre, Laboratorium Soete, Universiteit Gent, Belgium
E. Torstad, DnV, Hovik, Norway

Fracture initiation resistance and plastic straining capacity of longitudinally laser welded pipes containing flaws ......................... 135
A. Lefevre, R. Denys, W. De Waele, Laboratorium Soete, Universiteit Gent, Belgium

Induction preheating and laser welding of high grade pipelines for energy transport: welding process optimisation .......... 153
C. Gérardin and A. Chehaibou, Institut de Soudure, Yutz, France

Session 4:  PLASTIC DESIGN 2 ........................................ 161

An engineering approach to the prediction of the tolerable defect size for strain based design ............................................. 163
R. Denys, W. De Waele, A. Lefevre, and P. De Baets, Laboratorium Soete, Universiteit Gent, Belgium

Plastic straining capacity of axially loaded pipelines, experimental facts and critical considerations .................................. 183
R. Denys, W. De Waele, A. Lefevre, and P. De Baets, Laboratorium Soete, Universiteit Gent, Belgium

Weld strength mismatch effects on plastic straining capacity of axially loaded pipelines .................................................. 209
R. Denys, W. De Waele, A. Lefevre, and P. De Baets, Laboratorium Soete, Universiteit Gent, Belgium

Tensile strain limits of girth welds with surface-breaking defects
Part 1: An analytical framework ............................................. 235
Part 2: Experimental correlation and validation .................................. 251
Y.-Y. Wang and W. Cheng, Engineering Mechanics Corp. of Columbus, Columbus, USA
D. Horsley, A. Glover, and J. Zoe, TransCanada PipeLines Ltd, Calgary, Canada
Martin McLamb, BP, Aberdeen, UK

Weld mismatch effects on the strain behaviour of flaws in X100 (Grade 690) pipe and girth welds ........................................... 267
Y.-Y. Wang, Engineering Mechanics Corp. of Columbus, Columbus, USA
D. Horsley, TransCanada PipeLines Ltd, Calgary, Canada

Weld area mismatch and pressure effects in strain-based design .......... 279
W. Mohr, EWI, Columbus, USA
Strain based design guidelines for pipeline girth welds .......................... 291

B. Mohr, EWI, Columbus, USA
R. Gordon, EWI Microalloying, Houston, USA
R. Smith, USD Dept. of Transportation, Washington, DC, USA

Session 5: PIPELINE WELDING ................................................................. 313

Developments in the application of MIAB welding of pipelines ............... 315
L. Fletcher, C. Stubbs and G. Stecher, MIAB Pipeline Technology Pty
Limited, Bright, Australia

Friex - Friction welding of pipeline girth welds ...................................... 325
P. Afschrift, Denys NV, Gent-Wondelgem, Belgium
P. De Baets and W. De Waele, Laboratorium Soete, Universiteit Gent,
Belgium
K. Faes, Belgian Welding Institute, Gent, Belgium

Recent tandem welding developments for pipeline girth welding ............. 335
S.A. Blackman and T. Liratzis, Cranfield University, Bedford, UK
R. Howard and M.G. Hudson, BP, Sunbury, UK
D.V. Dorling, TransCanada PipeLines Ltd, Calgary, Canada

Mechanised welding on in-service pipelines ........................................ 357
S.A. Blackman and R. Holdstock, Cranfield University, Bedford, UK
W.A. Bruce, EWI, Cleveland, USA
D.V. Dorling, TransCanada PipeLines Ltd, Calgary, Canada

Validation of an in-situ weld repair procedure for “old” cellulose pipeline girth welds .................................................. 373
W.N. Schipaanboord, Nederlandse Gasunie, Groningen, Netherlands
R. Denys, W. De Waele, and A. Lefevre, Laboratorium Soete, Universiteit
Gent, Belgium

Novel arc welding developments for pipeline root welding ....................... 389
S.A. Blackman, Cranfield University, Bedford, UK, J. Norrish, Univ. of
Wollongong, Australia, and D.D. Harwig, EWI, Columbus, USA

Evaluation of brittle fracture performance of girth welded joints by beam welding ......................................................... 403
M. Toyoda, M. Ohata, Osaka University, Osaka, Japan
N. Ishikawa, T. Shinmiya, JFE Steel Corp, Fukuyama, Japan
M. Koçak, GKSS Research Center, Geesthacht, Germany

Session 6: DUCTILE FAILURE AND CRACK ARRESTORS .............. 421

Application of X80 into Japan: Fracture control .................................. 423
S. Kawaguchi et al., Tokyo Gas Co, Pipeline Technology Center, Yokohama,
Japan

A study of ductile failure processes in high strength linepipe using damage mechanics methods ........................................ 441
R.M. Andrews, Advantica Technologies, Loughborough, UK
S.H. Hashemi, I.C. Howard, and J.R. Yates, University of Sheffield, UK
A. Edwards, Exploration & Production Technology Group, BP Exploration,
Sunbury on Thames, UK
Ductile fracture resistance characterization measurement improvements ................................................................. 457
N. Pussegoda, A. Fredj, and A. Dinovitzer, BMT Fleet Technology Ltd, Kanata, Canada
A. Glover, D. Horsley, and L. Carlson, TransCanada Pipelines, Calgary, Canada
Fracture propagation resistance evaluation of X100 TMCP steel pipes for high pressure gas transportation pipelines by full scale burst tests ................................................................. 467
G. Demofonti, G. Mannucci, and M. Di Biagio, Centro Sviluppo Materiali - Tenaris Group, Products Application, Rome, Italy
H.-G. Hillenbrand, Europipe GmbH, T.S., Ratingen, Germany
D. Harris, Corus Tubes, Hartlepool, UK
Crack arrester design by finite element analysis for X100 gas transportation pipeline .................................................. 483
G. Mannucci, M. Di Biagio, and G. Demofonti, Centro Sviluppo Materiali - Tenaris Group, Products Application, Rome, Italy
A. Fonzo and P. Salvini, University of Rome, Italy
A. Edwards, Exploration & Production Technology Group, BP Exploration, Sunbury on Thames, UK
Crack arrestors ................................................................................................................................................. 501
H.-G. Hillenbrand, Europipe GmbH, Ratingen, Germany
H. Brauer and G. Knauf, Salzgitter Mannesmann Forschungsinstitut GmbH, Duisburg, Germany
Design basis for fracture arrestors in gas transmission pipelines ........... 515
B.N. Leis, X.K. Zhu, T.P. Forte and B.C. Glenn, Battelle, Columbus, USA

Volume 2

Session 7: OLD PIPELINES AND PLASTIC COLLAPSE ............... 535

Assessment of mechanical properties in pipelines of unknown provenance ................................................................. 537
B.L. Jones, GE Energy Oil & Gas, PII Pipeline Solutions, Cramlington, Northumberland, UK
External MIC leads to reformulation of inspection program ............... 549
W. Sloterdijk, R. Boekholt and H.D. de Haan, Gastransport Services, Groningen, The Netherlands
Awareness of unexpected pipeline integrity threats .......................... 557
H.D. de Haan, W. Sloterdijk and R. Boekholt, Safety Department, Gastransport Services, Groningen, Netherlands
Assessment of older pipelines - Part 1: Proposed methodology and statistical approach ................................................. 565
P. Roovers, Fluxys, Belgium
R. Denys and A. Lefevre, Laboratorium Soete, Universiteit Gent, Belgium
B. Leis, Battelle, Columbus, USA
J. Van Dijck, Probabilitas, Leuven, Belgium
Assessment of older pipelines - Part 2: Validation of initiation and propagation models .......................................................... 581
P. Roovers, Fluxys, Belgium
R. Denys and A. Lefevre, Laboratorium Soete, Universiteit, Belgium
B. Leis, Battelle, Columbus, USA
J. Van Dijck, Probabilitas, Leuven, Belgium

Local buckling and post-buckling behaviour of high strength linepipe .... 593
T. Zimmerman and C. Timms, C-FER Technologies, Edmonton, Canada
A. Glover, and J Zhou, TransCanada PipeLines Ltd, Calgary, Canada
N. Suzuki, JFE R&D Corporation, Kawasaki, Japan

Session 8: PIPELINE INSPECTION 1 ........................................... 605

Digital radiography in NDT applications ........................................... 607
E. Deprins, GEIT, Agfa Gevaert, Mortsel, Belgium

Introduction of inspection of butt welded joints by the in-pipe camera system .......................................................... 615
H. Morisaki, M. Kon and M. Tunazaki, Osaka Gas Co Ltd, Osaka, Japan
Y. Kayamori, Nippon Steel Corporation, Japan

Validation of current approaches for girth weld defect sizing accuracy by pulse-echo, time-of-flight diffraction, and phased-array mechanized ultrasonic testing .......................................................... 627
M. Lozev and R. Spenser, Edison Welding Institute, Columbus, USA
D. Hodgkinson, TransCanada PipeLines Ltd, Calgary, Canada
B. Gremmet, BWX Technologies, Lynchburg, USA

Automated ultrasonic testing and high-performance pipelines: bridging the gap between science and practice ........................................... 643
T. Bouma, KontrollTechnik Benelux, Naaldwijk, Netherlands
R. Denys, Laboratorium Soete, Universiteit Gent, Belgium

Integration of automated ultrasonic testing and engineering critical assessment for pipeline girth weld defect acceptance ........................................... 655
R.M. Andrews, Advantica, Loughborough, UK
L.L. Morgan, MIC Ltd, Nottingham, UK

Inspecting seamless pipe welds of variable wall thickness using ultrasonic phased arrays .......................................................... 669
M. Moles, R/D Tech, Mississauga, Canada
D. Stewart and M. Gray, Oceaneering OIS, Aberdeen, UK
H. Godenot and H. Romazzotti, Total, Paris and Pau, France

Session 9: FULL SCALE AND FATIGUE BEHAVIOUR .................. 683

Deep water girth welds - a compromise between stress and flaw ........ 685
F. Terhoeve, Heerema Marine Contractors, Leiden, Netherlands

Constraint effects on linepipe toughness ....................................... 703
G. Shen and W.R. Tyson, CANMET, Natural Resources Canada, Ottawa, Canada
A. Glover and D. Horsley, TransCanada PipeLines Ltd, Calgary, Canada
n-plane resonance frequencies of a deepwater suspended pipeline during J-lay ................................................................. 721
R.H.M. Ogink, Delft University of Technology, Delft, Netherlands
P. Liu, Intec Engineering, Delft, Netherlands

Longitudinal welded pipes with enhanced fatigue strength pipe ............. 735
M. Erdelen-Peppier, G. Knauf, and U. Marewski, Salzgitter Mannesmann Forschungsinstitut GmbH, Duisburg, Germany
O. Reepmeyer, Europipe GmbH, Ratingen, Germany

Studies on collapse testing of UOE linepipe for deepwater applications . 753
U. Marewski, Salzgitter Mannesmann Forschungsinstitut GmbH, Duisburg, Germany
D. De Geer, C-Fer Technologies, Edmonton, Canada
H.-G. Hillenbrand, Europipe GmbH, Mulheim, Germany
B. Weber and M. Crawford, BP-EPT – Offshore Systems, Sunbury, UK

Cyclic deformability of steel pipes with local metal loss and aseismic performance of repair methods ........................................ 773
M. Miwa and T. Kurobe, Toho Gas, Nagoya, Japan
N. Oguchi, Tokyo Gas Co, Tokyo, Japan
Y. Okajima, Osaka Gas, Osaka, Japan

Session 10: X100 AND X120 PIPELINE STEELS .......................... 787

Microstructural aspects of high strength pipeline girth welds .......... 789
N.V. Bangaru, J.Y. Koo and A. Ozeckin, Corporate Strategic Research, ExxonMobil Research and Engineering Co, Annandale, USA
D.P. Fairchild and M.L. Macia, ExxonMobil Upstream Research Co, Houston, USA

Production and development of pipes for conductors and risers with strength level X80 and X100 without pipe expansion .......... 809
P. Fluess and V. Schwinn, AG der Dillinger Hüttenwerke, Dillingen, Germany
K. Buch, Eisenbau Kramer, Hilchenbakh-Dahlbruch, Germany

Development of grade X120 pipe material for high pressure gas transportation lines .......................................................... 823
H.-G. Hillenbrand, Europipe GmbH, Ratingen, Germany
A. Liessem, Europipe GmbH, Mulheim, Germany
K. Biermann and C.J. Heckmann, Salzgitter Mannesmann Forschungsinstitut GmbH, Duisburg, Germany
V. Schwinn, AG der Dillinger Hüttenwerke, Dillingen, Germany

Bainitic steel plates for X100 and X120 ........................................ 837
V. Schwinn, P. Fluess and K.-H. Tacke, AG der Dillinger Hüttenwerke, Dillingen, Germany
S. Zajac, Swedish Institute for Metals Research, Stockholm, Sweden

Metallurgical design of high strength steels and development of X120 UOE linepipe ............................................................. 851
H. Asahi et al., Nippon Steel Corporation, Technical Development Bureau, Kimitsu Works, and Pipe & Tube Division, Chiba, Japan
Session 11: CORROSION AND MECHANICAL DAMAGE

The failure assessment for gas pipeline with multi-corroded regions and with corroded defects in the welded region

Y.K. Lee, M.W. Moon, and K.H. Oh, Seoul National University, Korea
Y.P. Kim and W.S. Kim, Korea Gas Co R&D Centre, Korea

Reeling-induced residual stresses and its effect on the fracture behaviour of pipes with through-thickness cracks

Z.L. Zhang, Norwegian University of Science, Norway
E. Ostby, B. Nyhus, and J. Odegard, SINTEF Materials Technology, Norway
R. Verley, Statoil, Norway

Residual stress and distortion by pipeline welding

M. Mochizuki and M. Toyoda, Department of Manufacturing Science, Graduate School of Engineering, Osaka University, Osaka, Japan

An experimental and analytic approach for predicting the formation of dent and gouge damage on gas pipeline by an excavator

G. Malatesta, G. Mannucci, and G. Demofonti Centro Sviluppo Materiali - Tenaris Group, Products Application, Roma, Italy
L. Barsanti, Snam Rete Gas, Milan, Italy

Exploratory study on the hooking of pipelines by excavating machines

R. Champavere and M. Zarea, Gaz de France, Negoce and St Denis La Plaine, France

Ductile fracture model for a pipe with a dent

I.V. Orynyak and A.V. Bogdan, Institute for Problems of Strength, Kiev, Ukraine
V.V. Rozgonyuk, Gastransit, Kiev, Ukraine

Session 12: PIPELINE MANAGEMENT AND DEVELOPMENT

Goal based regulation of pipelines in Canada

K. Paulson, National Energy Board, Regulatory Development Team, Calgary, Canada

Managing Australia’s thin wall high strength pipelines:

Australian pipeline research

M.J. Kimber, M.J. Kimber Consultants Pty, Garran, Australia
L. Fletcher, MIAB Technology Pty Ltd, Australia
I. Haddow, Australian Pipeline Industry Association, Australia

Using benchmarking to optimise the cost of pipeline integrity management

J. Healy, D.G. Jones, A.J. Clyne, P.B. Cazenave and D. Alkazraji, GE Energy, Oil & Gas, PII Pipeline Solutions, Cramlington, UK

Getting a pipeline archive into a GIS

I. Peeters, Globe nv, Zandhoven, Belgium

Canadian pipeline safety performance indicators

K. Duckworth and K. Paulson, National Energy Board, Regulatory Development Team, Calgary, Canada
Realise the value of pipeline data management across the enterprise by exploiting legacy databases. 
S. Clouston, J. Smith, and D. Book, GE Energy

Safety assessment for the DONGFANG 1-1 pipeline installation. 
L. Zhang, Y. Zhang, L. Huo, and C. DENG, College of Material Science and Engineering, Tianjin University, Tianjin, P.R. China
B. Bai, X. Li and J. Cao, China Offshore Oil Development and Engineering Corp., Tanggu, P.R. China

Lowering a 42-in in-service pipeline in an estuary crossing. 
J. dela Motte, de la Motte & Partner, Reinbek, Germany
J. Spiekhout and S. Stratingh, Gasunie - Gastransport Services, Groningen, Netherlands
H. Lentfert and L. Verwaal, Visser & Smit Hanab, Papendrecht, Netherlands

Volume 3

Session 13: PIPELINE STEEL PROPERTIES

Effect of boron addition on the toughness and the microstructure of the seam weld metal. 
M. Hamada, S. Okaguchi, and Y. Komizo, Sumitomo Metal Industries, Corporate Research Labs, Amagasaki, Japan
A. Yamamoto, N. Takahashi, and T. Ikeda, Sumitomo Metal Industries Ltd, Kashima Steel Works, Japan
I. Takeuchi, Sumitomo Metal Industries, Tokyo, Japan

Microstructure and mechanical properties of API X80 grade C-Mn-Nb-Y-Mo linepipe steel. 
J.-Y. Yoo, S.-S. Ahn, and W.-Y. Choo, Technical Research Laboratory, POSCO, Pohang, Korea

Application of X80 in Japan: weldability. 
H. Motohashi and N. Hagiuwa, Tokyo Gas Co, Yokohama, Japan
T. Masuda, Japan Gas Association, Tokyo, Japan

Microstructure and toughness in the CG HAZ of X80 pipe steel. 
X. Xiaohuai, Q. Baonian, L. Jinfu, S. Yuyin, and W. Yikang, Shanghai Jiaotong University, Shanghai, P.R. China
L. Songnian, Institute of Metal Research, Academica Sinica, Shenyang, P.R. China

Session 14: PIPELINE INSPECTION 2

The status of in-line inspection for cracks in pipelines. 
K. Reher and M. Beller, NDT Systems & Services AG, Stuttgart, Germany

On-line inspection vs quality management. 
M. Celant and F. Trentin, Pipe Team, Milan, Italy

Independent experimental verification of the sizing accuracy of magnetic flux leakage tools. 
S. Westwood and S. Cholowsky, BJ Pipeline Inspection Services, Calgary, Canada
Session 15: WELDING CONSUMABLES ........................................ 1159

Limitations of cellulosic-coated electrodes for heavy-wall pipe and fittings .................................................. 1161
M.Q. Johnson, Los Alamos National Laboratory, Los Alamos, USA
W.A. Bruce, EWI, Columbus, USA

The development of welding material for high strength pipe steel ...... 1177
X. Xiaohuai, Q. Bainian, Y. Shuofei, L. Quan, and G. Xuming
Shanghai Jiaotong University, Shanghai, P.R. China
L. Songman, Institute of Metal Research, Academy of Science, Shenyang, P.R. China

Selection of welding consumables for higher strength pipelines ........ 1187
M.G. Hudson, BP Exploration Operating Co, Sunbury on Thames, UK
S.A. Blackman, Cranfield University, Bedford, UK
J. Hammond, Consultant, Baldock, UK
D.V. Dorling, TransCanada PipeLines Ltd, Calgary, Canada

Welding consumables for cost-effective pipelines .......................... 1207
D. J. Widgery, ESAB Group (UK) Ltd, Waltham Cross, UK
M. Amata and D. Meyer, The ESAB Group Inc.

Welding of thin-walled pipes of steel grade X70 resp. L485 .............. 1223
W. Berger, H Koningshofer, and M. Fiedler, Bohler Schweissstechnik Austria GmbH, Kapfenberg, Germany

Predicting the HAZ hardness of pipeline and tap fitting steels with artificial neural networks ................................... 1233
Z. Sterlingoski, D. Nolan, D. Druce, and J. Norris, University of Wollongong, Australia

Session 16: PIPELINE PROPERTIES AND Y/T RATIO ............ 1247

Understanding the hydrostatic strength test ................................. 1249
M. Law, Australian Nuclear Science and Technology Organisation, Materials Division, Menai, Australia
L. Fletcher, MIAB Technology Pty Ltd, Australia
G. Gentles, Agility Management Pty Ltd, Australia

Influence of thermal treatment on mechanical properties of UOE linepipe ......................................................... 1263
A. Liesen and M. K. Graef, Europipe GmbH, Ratingen, Germany
G. Knauf and U. Marcwski, Mannesmann Forschungsinstitut GmbH, Duisburg, Germany

Evaluation of the effect of yield to tensile ratio on the structural integrity of an offshore pipeline by a limit state design approach ... 1283
G. Mannucci, L. Di Vito, and G. Maltese, Centro Sviluppo Materiali, Tenaris Group, Products Application, Rome, Italy, and A. Izquierdo, Tamsa, and G. Cumino, Dalmine
Factors affecting pipeline failure strain .................................................. 1305
M. Law, Australian Nuclear Science and Technology Organisation, Materials
Division, Menai, Australia
L. Fletcher, MIAB Technology Pty Ltd, Australia
G. Bowe, BlueScope Steel, Australia
EPRG proposal for a maximum yield/tensile ratio in the European
linepipe code EN10208-2 ................................................................. 1317
W. Sloterdijk, Gastransport Services (NV Nederlandse Gasunie), Groningen,
Netherlands
T. Zimmerman, C-Fer Technologies, Edmonton, Canada
The yield to tensile ratio effect on the structural reliability of linepipes
with defects subject to different loads .............................................. 1333
H.A. Ernst, J.A. Villasante, and R. Bravo, Tenaris Group, Buenos Aires,
Argentina
A. Izquierdo, Tenaris Group, Veracruz, Mexico
Bending capacity of high strength linepipe ........................................ 1361
N. Suzuki, JFE R&D Corporation, Kawasaki, Japan
A. Glover, J. Zhou, and K. Adams, TransCanada PipeLines Ltd, Calgary,
Canada
M. Toyoda, Osaka University, Osaka, Japan

Session 17: PIPELINE DESIGN ......................................................... 1375
Application of X80 into Japan: Earthquake resistance ...................... 1377
H. Yatabe, N. Fukuda, and T. Masuda, Pipeline Technology Center, Tokyo
Gas Co Ltd, Yokohama, Japan
M. Toyoda, Osaka University, Osaka, Japan
Strength and safety of gas pipelines through engineering design ....... 1393
R.F. Loeches, Repsol-Enagas, Madrid, Spain
The classical approach to end-effect analysis of elastic pipe bend ....... 1405
I. V. Orynyak and S. A. Radchenko, Institute for Problems of Strength, Kiev,
Ukraine
V. V. Rozgonyuk, Nafto-Gas Ukrainy, Kiev, Ukraine
On the numerical calculation of collapse and collapse propagation
pressure of steel deepwater pipelines under external
pressure and bending: experimental verification of the finite
element results ................................................................. 1417
R.G. Toscano, L. Mantovano, and E.N. Doorkin, Tenaris Group, Center for
Industrial Research, Campana, Argentina
Design and development of pipe-in-pipe systems for ultra-deepwater
applications ........................................................................... 1429
B. Peacock, Corus R&D, Hartlepool, UK
Construction of a transmission pipeline in Japan's
hostile environments .................................................................. 1439
D. Terai, Osaka Gas Co Ltd, Kusatsu, Japan
World's first 18-in reeled pipe installation ................................. 1455
G. Brown and P. Thomson, Technip Offshore
M. Fryer, Corus Tubes Ltd, Hartlepool, UK

Finite element modelling of buried steel pipelines in settlement areas 1471
M. A. N. Hendriks, C. M. P. Hart, and C. M. Frissen, TNO Diana, Delft, Netherlands

Session 18: FITNESS-FOR-PURPOSE ................................. 1485
An overview of the pipeline defect assessment manual .................. 1487
A. Cosham, Penspen Integrity, and Cambridge University Engineering
department, Cambridge, UK
P. Hopkins, Penspen Integrity, Newcastle upon Tyne, UK

Failure assessment diagram for assessing cracks in a weldment heat-affected-zone of a natural gas pipeline .................. 1503
W.-S. Kim and J.-H. Baek, Research and Development Center, Korea Gas Corporation, Ansan, Korea
D.-J. Kwun, School of Materials Science and Engineering, Seoul National University, Seoul, Korea

Integrity of reduced pressure electron beam girth welds for deepwater pipelines ........................................................................ 1517
H. G. Pisarski and C. Punshon, TWI Ltd, Cambridge, UK

Verification of fracture toughness and defect tolerance of X120 girth welds .................................................................................. 1529
M. L. Macia, S. D. Papka, and D. P. Fairchild, ExxonMobil Upstream Research Co, Houston, USA
R. Denys and A. Lefevre, Laboratorium Soete, Universiteit Gent, Belgium

The assessment of girth weld anomalies detected in an Argentine gas pipeline ............................................................................. 1555
P. Rivarota, Ynsor S.A., Argentina
A. Clive, A. Wilde, and R. Peverelli, GE Energy, Oil & Gas, PHI Pipeline Solutions, Argentina

Volume 4

Session 19: DEVELOPMENT OF PIPELINE STEELS 1 ................. 1571
Development of HFIW linepipe for offshore applications .............. 1573
B. Zimmermann, Mannesmann Line Pipe, Hamm, Germany
H. Brauer and U. Marcuski, Salzgitter Mannesmann Forschungsinstitut GmbH, Dusseldorf, Germany

Advances in the production of quality high frequency induction welded linepipe ............................................................................. 1595
D. Simmons, Corus Tubes, Corby, UK

Recent developments of high strength linepipes in hostile environments ................................................................................. 1603
Y. Terada et al., Nippon Steel Corp., Kimitsu Steel, Chiba, Japan
Development of high strength heavy wall seamless sour service linepipe for deep sea .......................................................... 1619
K. Kondo, M. Hamada, and Y. Komizo, Sumitomo Metal Industries Ltd, Corporate R&D Labs, Amagasaki, Japan
N. Hisamune, N. Murao, H. Osaka, and T. Murase, Sumitomo Metal Industries Ltd, Pipe and Tube Works, Amagasaki, Japan

High grade linepipe for heavy sour environment .......................... 1633
N. Ishikawa, S. Endo, and T. Shinmya, JFE Steel Corporation, Steel Research Laboratory, Fukuyama, Japan
T. Wada, JFE Steel Corporation, Plate Business Planning Department, Tokyo, Japan
J. Kondo, JFE Steel Corp, Fukuyama Works, Fukuyama, Japan

The main directions of development of pipe steels and large diameter pipe production in Russia ........................................... 1649
Y. Morozov, L. Efron, and S. Nastich, I.P. Bardin Institute for Ferrous Metallurgy, Moscow, Russia

Production technique for advanced grade pipe steel ..................... 1659
Y.-Y. Shan, Y. Zhong, K. Yang and Y.-K. Wang, Institute of Metal Research, Academia Sinica, Shengang, China
F.-R. Xiao, School of Materials Science & Engineering, Yan Shan University, Qinghuang-Dao, P.R. China
Y.-P. Ma, Technology and Quality Control, Angang New Steel, Anshan, P.R. China

Session 20: DEVELOPMENT OF PIPELINE STEELS 2 ................. 1677

Metallurgical design of advanced heavy wall seamless pipes for deepwater applications ............................................... 1679
E. Avelli, D. Collelunzio and M. Pontremoli, Centro Sviluppo Materiali S.p.A., Rome, Italy
G. Cummo, Dalmine S.p.A., Tenaris Group, Dalmine, Italy
A. Izquierdo and H. Quintanilla, Tenaris Group, Veracruz, Mexico

Effect of thermomechanical processing parameters on mechanical properties and microstructure of API-X80 grade hot rolled strips .... 1689
K.-B. Kang, JH Bae and W.-Y. Choo, POSCO, Technical Research Laboratories, Gijangbuk, Korea

Effect of Cu addition on hydrogen invasion behaviour for X65 linepipe steels in sour environments .................................... 1701
T. Harada and H. Asahi, Nippon Steel Corporation, Steel Research Laboratories, Chiba, Japan

Latest evolutions in material properties assessment of supermartensitic stainless steels as considered by a material fabricator ....................... 1713
P. Toussaint, Industeel, Stainless Steel Development, Charleroi, Belgium
V. Ligier, B. Bonnefois, and L. Coudeuse, Industeel, Centre de Recherche en Matériaux du Creusot, France
The influence of carbon contents on the centreline segregation intensity in continuous cast slabs and plates of steel for large diameter pipes ................................................................. 1727
Y. I. Matrossov, I. P. Bardin Central Research Institute for Ferrous Metallurgy, Moscow, Russia
A. O. Nosachenko and O. B. Isayev, Azovstal Iron & Steel Works, Mariupol, Ukraine

Development and production of X70 plate steel for WEPP ...................... 1741
Huang Kaimen and L. Jinshan, China Petroleum Material and Equipment Corporation
C. Qingwu, Beijing Science and Technology University
W. Zhenyu, Wuyang Iron and Steel Corporation

Session 21: PIPELINE COATINGS AND CORROSION ................. 1749

External coatings versus stones: an aggressive relationship .............. 1751
L. Valin, N. Ramambason, and R. Batisse, Gaz de France, Research and Development Division, Saint Denis La Plaine, France

Pipeline coatings and joint protection: compatibility considerations..... 1763
R. Buchanan, N. Gntis and D. Tailor, Camusa-CPS, Toronto, Canada

Microbe-assisted external corrosion in oil and gas pipelines............. 1779
L. Stanley, P. Sofos and B. L. Jones, GE Energy Oil & Gas, PH Pipeline Solutions, Cramlington, Northumberland, UK

Near-netural pH SCC resistance of pipeline steels: effect of material and mechanical parameters ................................................................. 1789
M. Meyer, Gaz de France, France
L. Scoppio CSM S.p.A., Italy
B. Rudd, Corus UK Ltd, UK
S. Matthews, Advantica Technology Ltd, UK
J. P. Jansen, Europipe, France

Experience in the prediction of corrosion growth rates in oil and gas pipelines ......................................................................................... 1813
P. Sofos, J. Dawson, and J. Race, GE Power Systems Oil & Gas, PH Pipelines Solutions, Cramlington, UK

Session 22: PIPELINE BEHAVIOUR ........................................... 1831

An experimental and numerical study of the effect of pre-strain on the fracture toughness of linepipe steel .................................................. 1833
A. Cosham, Penspen Integrity and Cambridge University, Engineering Department, Cambridge, UK
P. Hopkins, Penspen Integrity, Newcastle upon Tyne, UK
A. Palmer, Cambridge University Engineering Department, Cambridge, UK
The influence of tensile testing method on the measured properties of high strength steel linepipe ........................................ 1857

Full-scale large deformation tests and ultra low cycle fatigue tests for evaluating X-80 linepipe performance ........................................ 1881
Y. Kawanishi et al., The Japan Gas Association, Tokyo, Japan

Hydrostatic testing of transmission pipelines: when it is beneficial and alternatives when it is not ........................................ 1895
B.N. Leis, Battelle, Columbus, USA

Mechanical damage gaps analysis ........................................ 1921
B.N. Leis, Battelle, Columbus, USA
P. Hopkins, Penspen Integrity, Newcastle upon Tyne, UK
