International Society for Rock Mechanics

10th Congress

Technology roadmap for Rock Mechanics

Technical Co-ordinators
Prof. Matthew Handley
Prof. Dick Stacey

VOLUME 1
Contents

Analysis of the correlation between bending phenomena and physical-mechanical and petrographic parameters of Carrara marble slabs
A.M.G. Affuso and C.A. Garzonio ......................................................... 1

Geotechnical Rock mass Evaluation of Givi Dam site, (Case study, Ardabil-Iran)
R. Ajalloian and L. Karimzadeh .......................................................... 7

The Introduction of a Stiff Rockbolt and Hanging Wall Control Management System at a Platinum Mine in South Africa
K. Akermann, P. Altounyan, and T. Van den Berg .................................. 11

Use of magnetic anistropy sensor for measurement of stresses on steel support and its potential
S. Akutagawa, T. Matsuoka, H. Sekimoto, M. Ota, and K. Yasuhara ............ 19

Shear band propagation in soft rocks: numerical simulation of experimental results
A. Allodi, M. Castelli, S. Marello, and C. Scavia .................................. 23

Experimental Determination of Compressive, Pulling and Torsional Resistance of Mudcakes using a Triple Action Load Cell Assembly
Md. Amanullah .................................................................................. 29

The response of shotcrete to blast induced vibrations in mining
A. Ansell and L. Malmgren .................................................................. 33

Evaluation of dynamic grouting effect for Low-permeable rock
K. Aoki, Y. Mito, T. Yamamoto, K. Date, and S. Wakita ......................... 39

Pull tests of long-embedded cablebolts
T. Aoki, K. Shibata, F. Nakahara, Y. Maeno, R. Kawano, and Y. Obara ....... 45

Comparison of the fractography of rockbursts and impact structures
R. Armstrong, W.U. Reimold, and E.G. Charlesworth ........................... 49

A review of information on the influence of plan curvature on rock slope stability and its effect on the volume of wedge failures
R. Armstrong and T.R. Stacey .............................................................. 57

Integration of CSIR- and CSIRO-type of overcoring rock stress data at the Zedex Test Site, Åspö HRL, Sweden
D. Ask, F.H. Cornet, and O. Stepharisson ........................................... 63

Properties of excavation damaged zone caused by drill and blast excavation
J. Autio and H. Malmlund .................................................................. 69

An experimental study on the electrical potential of non-piezoelectric geomaterials during fracturing and sliding
Ö. Aydan, N. Tokashiki, T. Ito, T. Akagi, R. Ulusay, and H.A. Bilgin ........... 73

Continuum and discontinuum modelling of a high rock cut
G. Barla, M. Barla, A. Chiappone, U. Rabagliati, and L. Repetto .............. 79

Improved understanding of high pressure pre-grouting effects for tunnels in jointed rock
N. Barton and E. Quadros ................................................................... 85

Disturbance Assessment at the Wall of a Vertical Blasted Shaft in Marls
C. Bauer, J.P. Piguet, Y. Wileveau ....................................................... 93

Recent advances in the numerical simulation of tunnel excavation
G. Beer, C. Dinser, and M. Noronha .................................................. 99

Assessment of mass modulus of a weathered argillaceous rock
N.D. Benson and C.M. Haberfield .................................................... 103
Residual stresses in cylindrical rock samples
P. Bérest and G. Vouille .................................................. 107

Laboratory simulation of the behaviour of highly stressed mining fronts
M.C. Bétournay and H.S. Mitri ........................................... 113

Stiffness controlled shear behaviour of rock
M. Blümel, E.A. Button, M. Pötsch .................................... 121

The role of an advanced shotcrete constitutive model for reliable predictions of the ground-shotcrete interaction in tunneling
D. Boldini, R. Lackner, and H.A. Mang .................................. 125

Characterisation studies of Tectonised Clay shales and implications in the excavation of large size tunnels
M. Bonini, G. Barla, and M. Barla ......................................... 131

Integrated Seismic Imaging System for Geological Prediction During Tunnel Construction
G. Borm, R. Giese, and P. Otto .................................................... 137

Dynamic failure of pillar remnants—case studies
J.D. Bosman and G. van Aswegen ........................................... 143

An expert system approach in rock engineering risk assessment
A.V.Z. Brink .............................................................................. 151

Utilizing strain criteria to predict highwall stability performance
D. Brox and W. Newcomen ..................................................... 157

The Application of Ductile Support Methods in Alpine Tunnels
E.A. Button, W. Schubert, and B. Moritz ................................. 163

Prediction of P-wave transmission across a rock fracture with a dynamic normal behavior
J.G. Cai, J. Zhao, and X.B. Zhao .............................................. 167

Evaluation of roof rating systems being used in South Africa
I. Canbulat and T. Dlokweni .................................................... 175

Dealing with Expansive Rocks in the Los Quilos and Chacabuquito Water Tunnels Andes Mountains of Central Chile

An experimental damage model for predicting the nonlinear behavior of rock

Failure probability analysis of high rock slopes based on bionic algorithm
C. Chen and Y. Yang .............................................................. 199

Study of hollow friction bolts in rock by a three dimensional composite element method
S.H. Chen, Z.G. He, and P. Egger ............................................ 203

Numerical studies of the thermo-mechanical behaviour of rock mass around nuclear waste disposal repository
S.O. Choi, H.-S. Shin, and W.-K. Song ..................................... 207

Numerical modelling of brittle rock failure using a combined finite-discrete element approach: implications for rock engineering design
J.S. Coggan, R.J. Pine, D. Stead, and J.M. Rance ....................... 211

Mechanical behaviour of chalk reservoir: Numerical modelling of water sensitivity and time dependence effects
F. Collin, Y.J. Cui, Ch. Schroeder, R. Charlier .................................. 219

Analysis of a rock slope failure in a feldspar open pit mine
M. Cravero, G. Iabichino, F. Nacci, L. Rinaldi, and L. Vigliero .......................... 225

Modeling of factors influencing the extent of mud infiltration in a fractured rock mass
C. Detournay, C. Tan, and X. Chen ........................................... 231

Durability and Subzero Temperature Effects on Argillaceous Clastic Rocks
G. Dhakal, J.-I. Kodama, T. Yoneda, and K. Neaupane .................. 237

Importance of failure mechanisms for management of surface instability risk above abandones mines
C. Didier and J.P. Josien ......................................................... 243
In situ deformability characteristics of rock mass by Goodman Jack
M. Dixit, H. Dev, R. Singh, and A.K. Dhawan .................................................. 249

Tailings based pipe-support systems
M.J. Dunn, C.E. Hales, and N.R. Steward .......................................................... 255

The determination of stable inter-pillar spans at Tau Lekoa Mine
M.J. Dunn .................................................................................................................. 261

Modeling of plastic deformation and damage due to drying around a shaft in claystone
G. Duveau, W.Z. Chen, J.F. Shao, and O. Ozanam .................................................. 267

Hybrid finite-/discrete-element modelling of progressive failure in massive rock slopes
E. Eberhardt, D. Stead, J.S. Coggan, and H. Willenberg ........................................ 275

Uncertainty in Rock Mechanics and Rock Engineering—Then and Now
H.H. Einstein .......................................................................................................... 281

Berg Rock Freeway Tunnel: Optimizing the Heading Technique and the Operational Safety for the Tunnel built by the Shotcrete Method
C. Erichsen ................................................................................................................ 295

Stability of underground opening in rock salt
C. Erichsen and J. Werfling .................................................................................... 301

Slope unit based 3D landslide hazard mapping system
T. Esaki, M. Xie, G. Zhou, and Y. Mitani ................................................................. 305

Sensibility analysis of the thermo-hydro-mechanical behaviour of a radioactive waste storage shaft in a deep shale using probabilistic methods
S. Escoffier, F. Homand, A. Giraud, N. Hoteit, and K. Su ......................................... 309

Geotechnical parameters characteristics for a kind of schist in Iran
A. Fahimifar and H. Soroush .................................................................................. 315

Scale effect on the geometrical and mechanical properties of rock joints
N. Fardin, O. Stephansson, and L. Jing ..................................................................... 319

Study on nonlinear damage localization process of rocks under water chemical corrosion
X.-T. Feng, C. Sili, and S. Li .................................................................................... 325

Managing the hazard of wind blast/air blast in caving operations in underground mines
J.C.W. Fowler, B.K. Hebblewhite, and P. Sharma .................................................. 329

Stability assessment of underground machine hall of Rogun HPP based on the results of physical modeling and in-situ observations
E. Freiberg, A. Kolichko, A. Fedchun, A. Yolkin, and I. Grigoriev ................................ 335

TBM cutting forces with particular reference to cutter and tunnel diameters
K. Fukui and S. Okubo ............................................................................................. 343

Influence of pore water on the design of deep galleries in low permeable rocks
R. Gärber and V. Labiouse ..................................................................................... 347

A numerical study of seismic damage to deep underground openings
M. Genis and H. Gercek ......................................................................................... 351

Mechanical–transport processes in salt: consequences for abandonment of underground exploitations
M. Ghoreychi and X. Daupley ................................................................................ 357

Coupled Elasto-Plastic Model for Hydraulic Fracturing of Unconsolidated Formations
I. Gil and J.-C. Roegiers ......................................................................................... 363

Economics of geotechnical stope design at Obuasi
S.C. Goel and P. Amponsah-Mensah ..................................................................... 371

Elasticity anisotropy in Oshima Granite
A. Golshani, T. Takemura, M. Oda, and K. Suzuki ................................................. 377

Modeling rock mass bulking around underground excavations
J. Gómez-Hernández and P.K. Kaiser ..................................................................... 389

SRC rock mass classification applied to tunnels under high tectonic stress
L.L. Gonzalez de Vallejo ......................................................................................... 397

Probabilistic Determination of Rock Mass Behavior and Support of Tunnels
A. Goricki, M. Pötsch, and W. Schubert ............................................................... 405
Noxious gas emissions from the closed iron mines to the built-up areas on the surface
D. Grabowski and Z. Pokryszka ................................................................. 409

Surface parameters for quantifying the hydro-mechanical anisotropy of rock discontinuities
G. Grasselli, J. Wirth, and W. Robert ....................................................... 415

A study on the partially saturated mechanical behavior of iron ore of Lorraine (France)
D. Grgic, F. Homand, and A. Giraud ....................................................... 425

Photogrammetry for Structural Mapping in Mining
H.P. Grobler, G. Poropat and A.R. Guest ................................................. 431

Tunnelling in heterogeneous ground—stresses and displacements
K. Grossauer, W. Schubert, C.Y. Kim ..................................................... 437

Numerical modeling of Hydro-Mechanical fracture behavior
C. Guiducci, F. Collin, J.P. Radu, A. Pellegrino, and R. Charlier ................. 441

The effect of resin annulus on anchorage performance of fully encapsulated rockbolts
P.C. Hagan ............................................................................................. 447

Strength, Deformability, and Micromechanics of Brittle Fracture in a Crystalline Rock Under True Triaxial Compressive Stresses
B. Haimson ............................................................................................. 451

Practical tool for quality control of overcoring stress measurement data
M. Hakala ................................................................................................ 457

Analyses of Tunnel Stress Failures at Pyhäsalmi Mine
M. Hakala and P. Tolpanen .................................................................... 461

Fracture displacement due to thermal load from nuclear waste at a repository
E. Hakami ................................................................................................ 465

Design of open pit slopes in Ganboke gold mine, Chad
K.-C. Han and S.-Y. Kim ....................................................................... 471

A design protocol for mining remnants in hard rock mining operations utilising a rock mass classification system
J.W.L. Hanekom ..................................................................................... 475

Effect of Roughness on the Peak Shear Strength of Clay Infilled Joints under Constant Normal Stiffness
A. Haque and B. Indraratna ................................................................ 481

Visualising and Understanding the Stress Path for Rock Mechanics Modelling and Testing, and Rock Engineering Design
J.P. Harrison and J.A. Hudson ................................................................. 487

Matching numerical methods to rock engineering problems: a summary of the key issues
J.P. Harrison and J.A. Hudson ................................................................. 493

Fully dynamic stability analysis of jointed rock slopes
Y.H. Hatzor ............................................................................................. 503

Studies of strength performance and deformation characteristic of layered rock
P. He and Z. Huang ............................................................................... 515

Small scale laboratory experiments of boulders bouncing on granular slopes
B. Heidenreich and V. Labiouse .............................................................. 519

Characterisation of cellular lightweight concrete and timber stope supports
M. Heyns, M.J. Pretorius, and P.N. Erasmus ........................................ 523

Mechanical Behaviour of Surrounding Rock Mass and New Lining Structure of Air-tight Pressure Cavern
M. Hori, Y. Goda, and H. Onishi ............................................................. 529

Mechanical behaviour of rock salt masses under high stress to strength ratio (damaging) and under very low stress to strength ratios with high confining pressure (healing)
Z. Hou .................................................................................................... 533

Numerical identification of the excavation damaged zone in rock salt
Z. Hou and K.-H. Lux ........................................................................... 539

Studies of load transfer mechanism for rock-socketed pile
Z. Huang, P. He, and X. Zhang ................................................................. 545
Formation and stabilization of rock cavern roof arches
Z. Huang, E. Broch, and M. Lu

Use of the DRA technique, porosimetry and numerical modelling for estimating the maximum in situ stress in rock from core
S.P. Hunt, A.G. Meyers, V. Louchnikov, and K.J. Oliver

Behaviors of groundwater flow in the vicinity of a HLW repository
Y. Hwang and C.H. Kang

A few remarks on storage of low temperature materials in rock caverns
Y. Inada and N. Kinoshita

Shear behaviour of graphite infilled joints based on Constant Normal Stiffness (CNS) test conditions
B. Indraratna and H.S. Welideniya

Preliminary assessment of rockfall hazard based on GIS data
M. Jaboyedoff and V. Labiouse

Excavation simulation for information-oriented construction of large powerhouse caverns at depth
Y. Jiang, Y. Tanabashi, J. Xiao, and Z. Song

Consideration for 2-D and 3-D modelling of shock wave propagation in jointed rock masses
Y.Y. Jiao, J. Zhao, and J.G. Cai

Study of the effects of shaft pillar extraction on a vertical shaft located in highly stratified and poor quality rock masses
G. du T. Judeel

Effect of discontinuity orientation and spacing on the blasting performance in some open cast mines of TKI-Turkey
G. Kaçar, A. Özelengil, and H.A. Bilgin

Interpretation and modelling of a hydromechanical in situ experiment within a fractured calcareous rock mass
I. Kadiri, V. Merrien-Soukatchoff, and Y. Guglielmi

Stress analysis on slope profiles along the plane of failure at the vicinity of angulated surfaces with imbedded weak layer
K.N. Karparov

Integration of seismic observations from deep level gold mines with dynamic numerical modelling
M.O. Kataka, M.W. Hildyard, and E.J. Sellers

The interaction of rock mass properties and the project specific boundary conditions as basis for the design of deep excavation pits
R. Katzenbach, M. Vogler, and U. Adamietz

Design of lining system for a pressure tunnel on the base of interaction between rock and lining
A. Kazemi and M.A. Ahmadi

Measurements and analyses of blasting vibrations
J.R. Kiehl and J. Werfling

Railway tunnel design against karstic collapse in Korea

Reevaluation of rock mass classification using multivariate analysis and estimation of the tunnel support
B.H. Kim, H.S. Yang, and S.K. Chung

Early shaft reef removal at Beatrix No. 3 Vertical Shaft
J.W. Klokow and S.L. Mulder

An initial assessment of the closely spaced dip-pillar mining layout as practised at Driefontein Gold Mine
J.W. Klokow, K.L. Riemer, and R.I.L. Ferreira

Rockbursts in the period of mining activity reduction in Ostrava-Karvina Coalfield
P. Konecny, V. Velicka, R. Snuparek, G. Takla, and J. Ptacek

A new rock mass failure criterion for biaxial loading conditions
P.H.S.W. Kulatilake, B. Malama, and J. Park

Measurement of in situ stresses in deep drillholes for a hydroelectric project
N. Kumar, A. Varughese, S.K. Khullar, and A.K. Dhawan

Volume changes in sandstone under true triaxial compression conditions
M. Kwaśniewski, M. Takahashi, and X. Li
