</table>
Shear-flow coupling properties of a rock joint and its modelling by Geographic Information System (GIS)
Y. Mitani, T. Esaki, M. Shariatzadeh, and F. Vallier ................................................................. 829
Prediction of the geological condition ahead of the tunnel face in TBM tunnels by geostatistical simulation technique
Y. Mito, T. Yamamoto, S. Shirasagi, and K. Aoki ................................................................. 833
Numerical Solution for the Deformations of Tunnels in Rock Masses and its Application to Estimate In Situ Stress Ratio K0
J.C. Monge and M. Arlandi ................................................................. 837
Application of borehole seismic and AE monitoring technique in the rock cavern
Parameter variability in the toppling stability of rock blocks
J. Muralha ................................................................. 849
A new evaluation method of JRC and its size effect
S. Murata and T. Saito ................................................................. 855
Demonstrative experiment for compressed air storage in an unlined rock cavern
K. Nakagawa, H. Suenaga, T. Shidahara, and Y. Ikekawa ................................................................. 859
New directions for the effective analysis of stress and strain induced by tabular mining
J.A.L. Napier ................................................................. 863
A quantitative evaluation of the load bearing capacity of ground and characteristic curves of tunneling
T. Nishimura, H. Kiyama, and K. Wakiwata ................................................................. 871
Measurement of induced stress under high rock stress by compact conical-ended borehole overcoring technique
“The Construction Of Two Tunnels Through Expansive Volcanic Clays”
C.S. Oteo, H. Suarez, and P. de la Fuente ................................................................. 879
Stability of large rock caverns excavated in a highly stressed region
Probabilistic approach in rock slope stability analysis for Himalayan conditions
S. Pathak and B. Nilsen ................................................................. 887
Viscoplastic behaviour of and damage to rock related to the design of underground waste depository cavities
F. Pellet, E. Boidy, A. Bouvard, and N. Hoteit ................................................................. 893
Comparison of changes in the strength and the deformation behaviour of rocks under static and dynamic loading
V. Petros, M.N. Bagde, K. Holub, and P. Michalick ................................................................. 899
Rock avalanche run out prediction: combined application of two numerical methods
M. Pirulli, W. Roth, C. Scavia, and R. Poisel ................................................................. 903
Use of pumping packer tests and geometry of the joints to analyse flow and transport of contaminants in basaltic rock
E.F. Quadros, A. Chiarini, F. Fernandes, G. Vilela, J.M. Cardoso, L.C. Agostini, and J. Ireno ................................................................. 907
An engineering classification for rocks and rock masses
T. Ramamurthy ................................................................. 915
An integrated approach for determining the viability of extracting three remnants in a scattered, deep level gold mine
T. Rangasamy, J. Oelofse, E. Sellers, and L. Linzer ................................................................. 919
Strength and mechanics of fractured rocks under triaxial loadings
P.G. Ranjith, F.P. Siew, A.M. Hefny, and J. Zhao ................................................................. 927
Numerical simulation of jointed block mass under uniaxial stress condition
K.S. Rao, V.K. Shrivastava, and R.P. Tiwari ................................................................. 935
Is it wavy or rough?
V. Rasouli and J.P. Harrison ................................................................. 943
Rock mass defect patterns and the Hoek-Brown failure criterion
S. Read, L. Richards, and G. Cook ................................................................. 947
Time-dependent behaviour of Tournemire argillites (France)
A. Rejeb ................................................................. 955
Repair works and tests at the Rossio tunnel, Portugal
L. Ribeiro e Sousa, J.V. Lemos, A. Sousa, and F. Pinto ................................................................. 961
Behaviour analysis of a slope in the river Sela right back
L. Ribeiro e Sousa, J.E. Quintanilha de Menezes, and I Ferreira ................................................................. 967
Lotschberg base tunnel: brittle failure phenomena encountered during excavation of the Steg lateral adit
F. Rojat, V. Labiouse, F. Descoeudres, and P.K. Kaiser ................................................................. 973

DMR (Dam Mass Rating). An adaption of RMR geomechanics classification for use in dams foundations
R. Romano ........................................................................................................................................... 977

SMR Geomechanics classification: Application, experience and validation
R. Romano, J.B. Serón, and E. Montalar ......................................................................................... 981

Modelling Effects of Accidental Explosions in Rock Tunnels
L. Rosengren, T. Brandshaug, P. Andersson, and P. Lundman ................................................................. 985

Hazardous passage of Mrazovka tunnel under a reinforced concrete structure
A. Roszypal and I. Zemanek .................................................................................................................. 991

Stope design in the Hishikari Gold Mine, Japan, by using numerical analysis
Y. Sagawa and J. Yamatomi .................................................................................................................. 995

Investigation of the geomechanical criteria for safe and efficient crown pillar extraction beneath stabilised
rock fill at the Crusader Mine
D.P. Sainsbury, Y. Cai, B.K. Hebblewhite, D. Finn, J. Whitford, and M. Berry ........................................ 1001

Development of downward compact conical-ended borehole overcoring technique for rock stress
measurement at great depth
K. Sakaguchi, H. Yoshida, M. Minami, Y. Suzuki, and K. Matsuki ......................................................... 1007

Pillar Failure in Deep Coal Seams: Numerical Simulation
M.D.G. Salamon, S. Badr, R. Mendoza, and M.U. Ozbay........................................................................ 1011

The anisotropic nature of selected metamorphic rocks from Greece
H. Saroglou, P. Marinou, G. Tsiambas ...................................................................................................... 1019

Applicability of the Hock-Brown failure criterion and the effect of the anisotropy on intact rock samples from
“Athen Schist”
H. Saroglou, P. Marinou, and G. Tsiambas .............................................................................................. 1025

Measurement of acoustic emission and interpretation of its results during excavation of a rock cliff with
opening joints
H. Sasao, A. Hirata, and Y. Obara ........................................................................................................... 1031

Deformability analysis of infinite jointed rock mass by the RCOD
A. Sato, K. Sugawara, and Y. Hirakawa ................................................................................................... 1035

Corrosion of rock bolts and the effect of corrosion protection on the axial behavior of cable bolts
I. Satola and J. Aromaa .......................................................................................................................... 1039

Comparison of continuous and discontinuous modelling for computational rock mechanics
T. Scheldt, M. Lu, and A. Myrvang .......................................................................................................... 1043

Method statement for Excavation of Powerhouse Cavern Considering Mudstone Layers in Masjed
Soleiman Dam
M. Shahabi and M. Kashfi ...................................................................................................................... 1049

Practical Method for Measuring Anisotropy of Rock Using a Hollow Cylinder
K. Shin ...................................................................................................................................................... 1053

A three-dimensional tessellation boundary element method for simulation of fracture zone around openings
K.-J. Shou ................................................................................................................................................ 1057

About common principles of developed geomechanical classifications and discrepancies in estimation of
strength of rock masses
Y.P. Shoupletsov ...................................................................................................................................... 1063

Experiences with a methodology for determining pillar conditions
M. Siefert and H. Wagner ......................................................................................................................... 1069

Geotechnical risk assessment of an underground magnesite mine
M. Siefert, H. Mali, H. Wagner, and T. Frömmer .................................................................................. 1073

Analysis and prediction of slow landslide evolutions by using automatic displacement monitoring systems
L. Simeoni, T. Proietti, and L. Mongiovi .................................................................................................. 1077

Study of variation in strength parameters before slope stability analysis
V.K. Singh and A. Kumar .......................................................................................................................... 1083

Mining induced stress estimation for pillar extraction at shallow cover
R. Singh, P.K. Mandal, and A.K. Singh .................................................................................................. 1087

Stability analysis of ore passes in the Kiirunavaara mine
J. Sjöberg, P. Lundman, E. Nordlund, and C. Quinteiro ......................................................................... 1093

The REP experiment at the Bure underground research laboratory: objectives, programme and design
K.B. Slimane, A. Thoraval, and O. Ozanam ............................................................................................ 1099
A note on the strength of Flint particles
N.A. Smith, J.J. Hislam, and R.J. Fowell ................................................................. 1105

In-situ stress measurements in an underground oil storage cavern using hydro-fracturing and overcoring methods
W.K. Song, S.O. Choi, C. Park, and C. Sunwoo ....................................................... 1109

Evaluation of some physical and mechanical properties of rocks using ultrasonic pulse technique and presenting equations between dynamic and static elastic constants
H. Soroush and A. Fahimifar ................................................................................. 1113

Design and construction of tunnel portals under difficult geotechnical conditions
R.M. Spang ............................................................................................................ 1119

The application of underground support liners reaches maturity
A.J.S. Spearing and I. Hague .............................................................................. 1127

A design methodology for mechanised stoping with stable support pillars at depth in the Bushveld Complex
D.A. Spencer and L.J. Gardner ........................................................................... 1133

Improved seismic event locations
S.M. Spottiswoode and L.M. Linzer ................................................................. 1141

Masjed-e-Soleiman HEPP, Iran Rock Engineering Investigations, Analysis, Design and Construction
B. Stabel and F.B. Samani .................................................................................. 1147

Examples of fracturing of rock at very low stress levels
T.R. Stacey and K. Yathavan .............................................................................. 1155

A theoretical model for the characterisation of rock mass mechanical properties—Application at the Åspö HRL, Sweden
I. Staub, A. Fredriksson, and R. Christiansson .................................................. 1161

Analysis of water permeation process in rock by X-ray CT
K. Sugawara, D. Fukahori, S. Kubota, and A. Sato ............................................ 1167

Research on visual simulation of coupled solid deformation and gas leak flow in parallel coal seams
P. Sun .................................................................................................................... 1171

3-D Modeling of rock mass quality
P. Syrjänen and P. Lovén .................................................................................... 1175

Long Term Laboratory Strength Tests in Hard Rock
Z. Szczepanik, D. Milne, K. Kostakis, and E. Eberhardt ..................................... 1179

A comparison of Jointed Rock Mass Strength Envelopes Using Hoek-Brown GSI and Direct Shear Results
J. Szymkowski and C. Haberfield ..................................................................... 1185

Monitoring and stability analysis of intake tunnels Karun III H.E.P.P.
R. Tabanrad ......................................................................................................... 1189

Effects of anisotropy and heterogeneity of rock mass on in-situ permeability tests
M. Takeda, M. Zhang, T. Esaki, and Y. Mitani .................................................... 1195

Numerical approach to influence of pore pressure magnitude and gradient on fracture propagation in brittle heterogeneous rocks
C.A. Tang, L.C. Li, Z.Z. Liang, and T.H. Yang ...................................................... 1199

Estimating the in-situ mass strength and time to failure of coal pillars in bord-and-pillar workings
J.A. Taylor and R.J. Fowell ................................................................................ 1203

Determination of in situ deformation modulus for cemented rockfill
D.R. Tesarik, J.B. Seymour, and F.M. Jones ....................................................... 1209

Confinement dependence on cohesion weakening
S.J. Thomas, J.A.L. Napier, and P.A. Lilly .......................................................... 1211

Hard rock tunnel boring, cutting, drilling and blasting: rock parameters for excavatability
K. Thuro and R.J. Plinninger .............................................................................. 1227

Analysis of rock avalanches generated by large planar rock slides by means of numerical methods for discontinua
P. Tommasi, C. Consorti, P. Campedel, and R. Ribacchi ................................... 1235

What boundary conditions should we apply? Applications to tunneling and to the AECL Underground Research Laboratory
F. Tonon and B. Amadei ...................................................................................... 1241

Experimental and numerical modelling of the tunnel face stability
J. Treкова and P. Prochazka .............................................................................. 1247
Size effect on shear strength of computer-aided-manufactured joints

The importance of incorporating dynamic effects of vertical oscillations in designing underground structures
K. Uenishi and S. Sakurai ............................................................................................... 1257

Applications of seismic hazard assessment methods in mines
G. van Aswegen ............................................................................................................. 1261

Coal pillar loading systems
J.N. van der Merwe, I. Canbulat, and D.P. Roberts ................................................. 1269

Strength of model rock masses with discontinuous joints
M. Van Sint Jan and M. Prudencio ........................................................................... 1275

Numerical modelling for the design of shortwall powered support units on the 2 seam at Matla Coal
J.J. van Wijk and J.W. Latilla ...................................................................................... 1281

Strain-softening behaviour of a schistose rock under triaxial loading
A. Varadarajan, K.G. Sharma, and M. Hashemi ..................................................... 1289

Effect of true tri-axial loading schemes on fracturing of limestone
A. Vervoort, A. Lavrov, and J.-P. Tshibangu .............................................................. 1293

Evaluation of four layouts for gold mining at a depth-range of 3500 and 5000 m
F.M.C.C. Vieira and S. Budavari ................................................................................ 1299

Deformation analysis for the design of the permanent ship lock of three Gorges Project
T. Wang, E. Zhou, H. Zhu, and F. Xu ........................................................................ 1311

Modelling water uptake in highly compacted bentonite in environmental sealing barriers
W. Wittke and J. Gattermann ...................................................................................... 1315

Upgrading the stability of three masonry dams in different ways
W. Wittke, D. Schröder, H. Polczyk ......................................................................... 1321

Large-scale infrastructure projects. Application of rock mechanics in geotechnical engineering to avoid delays in construction time and increases of costs—case studies
W. Wittke .................................................................................................................. 1329

Dimensioning of Tunnels in Swelling Rock
P. Wittke-Gatterman ................................................................................................. 1335

Study on Tunneling in Rock Masses with Inclined Layers Using Discontinuous Deformation Analysis (DDA)
J.-H. Wu, Y. Ohnishi, and S. Nishiyama ................................................................. 1343

Dam foundation design considering scattering of its deformability
Y. Yamaguchi, T. Akamatsu, and M. Nakamura ..................................................... 1347

Explore the geological conditions around the tunnel face using the seismic reflective survey
T. Yamamoto, S. Shirasagi, K. Aoki, and J.M. Descour ....................................... 1351

A new approach for borehole joint investigation—Development of Discontinuity Orientation Measurement drilling system
K.S. Yoon, T.F. Cho, B.O. You, and K.S. Won .......................................................... 1355

Underground storage in Sydney, some uncommon rock mechanics features of an uncommon project in Australia
T. You, J.C. Kandel, and N. Gatelier ...................................................................... 1359

Coupled hydromechanical modelling of surface subsidence in crystalline rock masses due to tunnel drainage
C. Zangerl, E. Eberhardt, S. Loew, and K.F. Evans ............................................... 1365

Effects of two parallel fractures with nonlinear deformational behavior on one-dimensional P-wave propagation
X.B. Zhao, J. Zhao, and J.G. Cai ............................................................................ 1371

Stability evaluation for Jinping arch dam by using bifurcation model in 3D FEM analysis

Behaviour of large-span rock tunnels and caverns under favourable horizontal stress conditions
Y. Zhou, J. Zhao, J.G. Cai, and X.H. Zhang ............................................................ 1381

Time-space effect and principle of variation loading analyses and application cases
W. Zhu and S. Li ....................................................................................................... 1387

Triaxial tests of carboniferous slates with static and dynamic loading
B. Zlender ............................................................................................................... 1391
