TABLE OF CONTENTS

DISCOA: Architectural Adaptations for Security and QoS .............................................. 1
   Omer Erdem Demir, Nenad Medvidovic, Eric Wohlstadter

XacT: A Bridge between Resource Management and Access Control in Multi-
layered Applications ................................................................................................. 9
   Maarten Rits, Benjamin De Boe, Andreas Schaad

Approach .................................................................................................................. 17
   Jie Ren, Richard Taylor, Paul Dourish, David Redmiles

Towards a Unifying View on Security Contracts .................................................... 25
   Bart De Win, Frank Piessens, Jan Smans, Wouter Joosen

Establishing Trustworthiness in Services of the Critical Infrastructure through
Certification and Accreditation .............................................................................. 33
   Seok Won Lee, Robin A. Gandhi, Gail-Joon Ahn

Risky Trust: Risk-Based Analysis of Software Systems ........................................... 41
   Zaid Dwaikat, Francesco Parisi-Presicce

Building Security Requirements with CLASP ......................................................... 49
   John Viega

A Framework for Testing Security Mechanisms for Program-Based Attacks .......... 57
   Ben Breech, Lori Pollock

A Software Flaw Taxonomy: Aiming Tools At Security .......................................... 65
   Sam Weber, Paul A. Karger, Amit Paradkar

Enabling Control over Adaptive Program Transformation for Dynamically
Evolving Mobile Software Validation ..................................................................... 73
   Mike Jochen, Anteneh Addis Anteneh, Lori L. Pollock, Lisa M. Marvel

Matching Attack Patterns to Security Vulnerabilities in Software-Intensive System
Designs ...................................................................................................................... 81
   Michael Gegick, Laurie Williams

Requirements Traceability to Support Evolution of Access Control ..................... 89
   Tine Verhanneman, Frank Piessens, Bart De Win, Wouter Joosen

Leveraging Architectural Models to Inject Trust into Software Systems ............... 97
   Somo Banerjee, Chris A. Mattmann, Nenad Medvidovic, Leana Golubchik

Security Quality Requirements Engineering (SQUARE) Methodology .................. 105
   Nancy R. Mead, Ted Stehney

Articulating and Enforcing Authorisation Policies with UML and OCL ............... 113
   Karsten Sohr, Gail-Joon Ahn, Lars Migge

Using Dynamic Information Flow Analysis to Detect Attacks against Applications .. 121
   Wes Masri, Andy Podgurski
