2ND INTERNATIONAL MEETING ON IROMAKING

1ST INTERNATIONAL SYMPOSIUM ON IRON ORE

Parallel event:
5TH JAPAN-BRAZIL SYMPOSIUM ON DUST PROCESSING-ENERGY-ENVIRONMENT IN METALLURGICAL INDUSTRIES

VITÓRIA, ESPÍRITO SANTO BRAZIL
SEPTEMBER 12-15, 2004
SUMMARY

V.1

CHAPTER 1 ........................................................................................................................................... 1

2nd INTERNATIONAL MEETING ON IRONMAKING AND 1ST INTERNATIONAL
SYMPOSIUM ON IRON ORE

Application of HPS (Hybrid Pelletized Sinter) Process at Monlevade Works .................. 3
Atmospheric Pollution Control in Pelletizing Plants – Project NIBRASCO CVRD ...............13
Balling Equipment Automation: The Process for Pellet Production at CVRD’s –
Fábrica Plant ................................................................................................................................. 27
Biological Control Applied to the Waste Water Treatment Plant (WWTP) of the Coke
Plant Effluents .................................................................................................................................. 39
Blast Furnace Operation Improvement Using the VAiron Automation System –
Practical Experience .................................................................................................................... 49
Blast Furnaces Pulverized Coal Injection Control Development Linked to
Production Rythm ......................................................................................................................... 59
Blast-Furnace Slag and Exhaust Cracking Catalyst: Raw Materials for Porcelain
Stoneware Tiles of the 21st Century ............................................................................................ 75
Characterization and Determination of the Origin of a Residue from Camburi
Beach; Vitória; ES; Brazil ............................................................................................................... 83
Characterization of Quadrilátero Ferrifero’s Iron Ores Used in Sintering Processes ....... 91
Combined Injection of Natural Gas and Oxygen at Saint-Gobain Blast Furnace 02 .......... 101
Construction Materials from Electric Arc Flue Dust, Ground-Cooled Ferrous Slag
and Foundry Sand ......................................................................................................................... 111
Control of the Scaffold Formation in the CSN’s Blast Furnace 2 ....................................... 123
Corrosion Behavior in Graphite Refractories Impregnated with ZrO2 and CeO2
Carrying Solutions ....................................................................................................................... 133
Distribution of Carbon and Morphological Aspects of the Iron Metallic Phase
Generated During Reduction of Cold Bonded Self-Reducing Briquettes .......................... 145
Electrostatic Precipitator at Belgo-Mineira’s Sinter Plant ..................................................... 157
Evaluation of Combustion and Properties of South Brazilian Coal and High Rank
Coals for Use in PCI ....................................................................................................................... 169

Replacement of the Lining 13 x 84” to 17 x 84” in Hydrocones Crushers Svedala
in the Secondary Crushing of Carajás Beneficiation Plant .................................. 485
Special Iron Ore Products of CVRD in the Carajás Region, in Mobile Plants .......... 489
Tailings DAM Management System of the Carajás Iron Ore Mines, Using a Geographic
Information System and a 3D Simulation of the DAMS ........................................ 495

CHAPTER 2 ............................................................................................................. 505

5TH JAPAN-BRAZIL SYMPOSIUM ON DUST PROCESSING-ENERGY-
ENVIRONMENT IN METALLURGICAL INDUSTRIES
Carbonthermic Reduction of Self-Reducing Briquettes Containing Wastes from Blast
Furnace and Bof Sludges, The ................................................................. 507
Collective Characteristics of Nano-scale Powder by Coke Moving Bed Filter .......... 517
Direct and Indirect Reduction and Carburization of Reduced Iron in Iron Ore-Carbon
Composite Pellets Heated at Elevated Temperatures ........................................... 531
Effect of Oxides Addition on the Reduction of Hematite and Graphite Mixture Obtained
by the Mechanical Milling .............................................................................. 541
Effect of Water-Gas Shift Reaction on Reduction of Iron Oxide Powder Packed Bed
With H2-CO Mixtures ..................................................................................... 561
Formation and Physical Property of Molten Calcium Ferrite in Iron Ore Sinter .... 571
Hydrogen Production by Using High Temperature Waste Gas in the Steelworks ..... 579
Investigation of the Oxygen Blast Furnace Process by Using a Multiphase Total Model .587
Iron and Steelmaking Solid Residues: Reutilization and Recycling Technologies .... 597
Kinetic Compensation Effect in the Carbothermic Reduction of Iron Oxides .......... 607
Low Temperature Production of Pig Iron from Carbon-composite Pellets Heated by
Microwave ....................................................................................................... 617
Non-spherical Carbon Composite Agglomerate and Its Quality ....................... 627
Particle Behavior at Lower Part in Cross-Flow Moving Bed Type Dust Collector .... 633
Pre-reduction of Iron Oxide with Coal Carbonization Gas without Tar .............. 643
Recruitment of Cr, Ni and Fe from EAF Dust of Stainless Steel: an Economic Evaluation .653
Reduction Simulation of a Descending Self-Reducing Pellet in the Upper Shaft of the
Tecnored Furnace ............................................................................................ 663
Simultaneous Decarbonization and Nitrogen Removal by Blasting Iron Ore Powder on to Molten Steel Surface ................................................................. 675
Study of the Portland Cement Pastes Behavior with Different Amounts of Electric Arc Furnace Dust (EAFD) ................................................................. 685
Study of the Process of Reduction and Semelting of Self-Reducing Pellets Between 1573 and 1673K ........................................................................... 695
Surface Rearrangement during wüstite reduction within its existence, The ................................................................. 705
Tridimensional Multiphase Mathematical Model of Dioxin Generation Within the Sintering Bed ........................................................................... 715
Zinc Oxide Addition in Cement Pastes to Study the Viability of Recycling Electric Arc Furnace (EAF) Dust in Civil Construction ........................................ 725

V.2
CHAPTER 3 ........................................................................................................ 749
PAPERS FROM INVITED LECTURERS - 2ND INTERNATIONAL MEETING ON IRONMAKING AND 1ST INTERNATIONAL SYMPOSIUM ON IRON ORE
Blast Furnace Modeling and Its Application to Propose New Operations ............... 751
Coal Fluidity, Stockpiling and Coke Quality ........................................................ 761
Coke Industry Biological Wastewater Treatment in the Twenty-First Century ........ 771
Cold Agglomerating Technology Interblocks ...................................................... 781
Compacted Charging: A Process for Economical Coke Making ........................... 1231
Cosipa Coal Blends Evolution in the Previous Years Aiming at the Suitability of Blast Furnaces Necessities ................................................................. 791
Critical Factors in the Development of Blast Furnace Burden Materials - LKAB's Vision ......................................................................................... 803
Design and First Operational Experience of the Pressure Regulated Oven System (PROven) at the Coke Plant "Schwelgern" ............................................. 817
Evaluation of a New Process for Ironmaking: a Productivity Model for the Rotary Hearth Furnace ........................................................................ 833
Evaluation of Iron Ores for their Pelletizing and Sintering ................................... 859
Factors Affecting Coke Size and Fissuring During Cokemaking .......................... 871
