A computational distributed gravel budget for the lower Fraser River, British Columbia
S. Li & R.G. Millar

The influence of drainage network formation and characteristics on a catchment’s sediment yield
E. Lykoudi & D. Zarris

Flow structure and bedload distribution at alluvial diversions
A. de Heer & E. Mosselman

Three dimensional modeling of sediment transport in a channel bend
N. Ruether & N.R.B. Olsen

Study on the channel development in a wide reservoir
C.J. Sloff, H.R.A. Jagers & Y. Kitamura

Measuring the flow structures that initiate stone movement
B. Hofland & R. Booij

Author Index

Volume 2

B. River hazards

B.1. Dam break and fast transients

Two dimensional modeling of rapidly varying flows by finite volume schemes
F. Aureli, A. Maranzoni & P. Mignosa

Experimental modeling of rapidly varying flows on wet bed and in presence of submersible obstacles
F. Aureli, A. Maranzoni & P. Mignosa

Velocity measurements in dam-break flow using imaging system
A.H.N. Chegini, G. Pender, A. Slaouti & S.J. Tai

1D model of surface waves generated by a reservoir’s bank landslide: a case study
P. García-Navarro, G. Pérez, P. Brufau & M.E. Vázquez-Cendón

Numerical simulation for destruction process of rubble stones dam
E. Harada, T. Hosoda & H. Gotoh

Effects of gradient pressure on resistance law in roll waves and effects of tension surface
S. Longo

Mathematical simulation of the effects of bridges and structures on flood waves propagation
L. Natale, G. Petaccia & F. Savi

Soil/water interaction during the breaching process of overtopped embankments
G. Pickert, G.H. Jirka, A. Bieberstein & J. Brauns

Experiments of dam-break flow in the presence of obstacles
S. Soares Frazão, B. Noël & Y. Zech

Sph simulation of dam-break flow in shallow water approximation
M. Gallati & D. Sturla

Simulation of flooding caused by an embankment breaking by means of a 2D finite volume numerical model
F. Aureli, A. Maranzoni & P. Mignosa

Dike-break induced flow: validation of numerical simulations and case study
M. Harms, S. Briechle, J. Königter & D. Schwanenberg
Surge wave front in a moving reference system
A. Bornschein

Roll waves evolution in channels
G. de Freitas Maciel

Physical model tests for dike-break induced, two-dimensional flood wave propagation
S. Briechle, A. Joeppen & J. Köngeter

Dispersive effects on linear instability of the Saint Venant flow model
C. Di Cristo & A. Vacca

B.2. Bank failure

Non-intrusive imaging measurements of the morphological evolution of a channel during a dam-break flow
N. le Grelle, B. Spinewine, S. Soares Frazão & Y. Zech

Experimental investigation of the breach growth process in sand dikes
B. Spinewine, A. Delobbe, L. Elslander & Y. Zech

Monitoring and modelling river bank processes: a new methodological approach
L. Rossi Romanelli, M. Rinaldi, S.E. Darby, L. Luppi & L. Nardi

Two-dimensional fluvial channel model with bank erosion on triangular grid
D. Farshi & H.-E. Minor

B.3. Flood propagation

Influencing factors of flow instabilities in steep and stepped channels
T.F. Ganz & F. Schöberl

3D calculation of curved open channel flow using physical curvilinear coordinates

Application of a 2D semi-lagrangian model to unsteady shallow water flow over dry bed
J. Murillo & P. García-Navarro

How a 2-D code can simulate urban flood situations
E. Mignot, A. Paquier & N. Rivière

Detailed validation of CFD for flows in straight channels
N.G. Wright, A.J. Crossley, H.P. Morvan & T. Stoesser

Synthetic hydrographs as a design tool for flood routing evaluation
E. Aureli, A. Maranzoni, P. Mignosa & U. Maione

Surface water modeling of the Biebrza River network
R. Verhoeven, R. Banasiak, D. Świetek, J. Chomański & T. Okruszko

An improved, robust implicit solution for the two dimensional shallow water equations on unstructured grids
S. Komaei & W. Bechteler

Supercritical flow in channel intersections
N. Rivière & R.J. Perkins

Factors on flood problems in Ubon Ratchathani province, Thailand
C. Chinnarasri, U. Israngkura & S. Jarukamol

Urban fluvial flood modeling using a two-dimensional diffusion wave treatment
D. Yu & S.N. Lane
B.4. Hyper-concentrated flows

Morphology of alluvial fans formed by hyperconcentrated tributaries

Transient hyper-concentrated flows: limits of some hypotheses in mathematical modelling
D. Berzi & E. Larcan

Numerical simulation of hyper-concentrated flows
D. Komatina & D. Dordević

Probabilistic estimation of debris-flow discharge by Monte Carlo simulation method
J.C. Chen, C.D. Jan & M.H. Lee

Concentrated mud suspensions flowing in open channels
G. de Freitas Maciel & F.L. dos Santos

Numerical simulation and field observation of debris roll waves in the Illgraben torrent, Switzerland
B. Zanuttigh & B.W. McArdell

B.5. Water pollution and contaminant transport

Some features of distribution of turbulence parameters of a jet flow in the river mouth
R. Khanbilvardi, B. Shteinman, V. Khazin & O. Ozkurt

An integrated system for prevention of pollution due to sewage and waste waters into rivers
F. Boccia, D. Postiglione, A. Fusco & L. Mancusi

A random walk approach for investigating near- and far-field transport phenomena in rivers with groin fields
V. Weitbrecht, W. Uijttewaal & G.H. Jirka

Turbulence of vertical round buoyant jets in a cross flow
M. Ben Meftah, A. Petrillo, P.A. Davies, D. Malcangio & M. Mossa

Shallowness and longitudinal dispersion in rivers
R. Booij

Pollution transport in the lagoon of Grado and Marano: a two dimensional modelling approach
M. Petti & S. Bosa

Numerical simulation of transport processes in not uniform turbulent streams
I. Cotto & R. Revelli

Estimation of longitudinal dispersion and storage zone parameters
P.M. Rowinski, T. Dysarz & J.J. Napiórkowski

Impact of riverine and CSO inputs on coastal water quality under different environmental conditions
S.M. Kashefpour, B. Lin & R.A. Falconer

River model calibration: a genetic algorithm with evolutionary bottlenecking
J.R. Manson & S.G. Wallis

Gas-transfer coefficient in a smooth channel. A preliminary assessment of dimensional analysis-based equation
C. Gualtieri & G. Pulci Doria

A methodological approach for surface water vulnerability assessment
M. Giugni, G. Pappalardo, G. Lombardi & N. Fontana

Longitudinal dispersion in an extreme meander channel, with changes in shape
J.B. Boxall & I. Guymer

Evaluation of longitudinal dispersion coefficients for over-bank flow
S.G. Wallis & J.R. Manson
Evaluation of transverse dispersion coefficient under transient concentration condition
I.W. Seo, K.O. Baek & S.J. Jeong

C. Hydraulics for river management
C.1. River training and restoration

Numerical simulation of bed change under compound channels flow in two-way main channel
H. Yokoyama, Y. Watanabe & Y. Suzuki

River meandering restoration – case study and laboratory experiments
R. Banasiak, R. Verhoeven, L. De Vos & S. Verfaille

Small river re-naturalization and cultural heritage
G. Müller, G. Himmelsbach, C. von Carmer & P. Fröhle

Stability of reinforced block ramp
S. Pagliara & P. Chiavaccini

Three dimensional hydrodynamics of pool-riffle sequences for urban stream restoration
J.F. Rodriguez, M.H. García, F.M. López & C.M. García

Morphological rehabilitation and flood protection by controlled river dynamics – a physical model
U. Stephan & M. Hengl

 Destruction of herbaceous vegetation by flood flow on a floodplain in a recovery process
S. Sugio & K. Watanabe

A new bed for the river Inde: a case study with special view on the risk of depth erosion
P. Kamrath, C. Schweim, S. Briechle & J. Königter

The complex flow in groyne fields: numerical modelling compared with experiments
W.S.J. Uijttewaal & S.A.H. van Schijndel

Groyne optimisation and river hydrodynamics
G.J. Akkerman, M.A. van Heereveld, M. van der Wal & J.M.T. Stam

C.2. Habitat management and maintenance flows

The environmental impact of dams and weirs: technical issues related to the minimum vital flow release
C. Comoglio

Calculation and visualization of fish movement in the flow with artificial structures
H. Ohashi & Y. Shimizu

An experimental study of velocity fields and flow patterns in aligned deep slot fishways
L. Pena, L. Cea, J. Puertas & T. Teijeiro

Estimating effect of navigation on fish habitats in inland waterways
C. Engelhardt, A. Sukhodolov & C. Wolter

C.3. Flood management and control

River flow forecast by means of selected black box models
A. Piotrowski, P.M. Rówinski & J.J. Napiórkowski

Merging of river training and restoration in river basin management
N. Tamai

Floods management in Uruguay. The case study of Tacuarembo city
A. Capeluto, L. Teixeira & G. López
New trends in flood risk analysis: working with 2D flow models, laser DEM and a GIS environment
P. Archambeau, B. Dewals, S. Erpicum, S. Detrembleur & M. Pirotton

1395

Floods control in Argentina: learning from the experience
R.A. Lopardo & R. Seoane

1403

Flood management and control in an urban environment – Diakoniaris case study
E.I. Daniil, S. Michas, G. Bouklis, P.L. Lazaridou & L.S. Lazarides

1411

Flood mitigation planning related to land use
Y. Takeuchi & M. Takezawa

1421

Modeling floodplain flow on lower Deer Creek, CA
M.L. MacWilliams, Jr., R.L. Street & PK. Kitanidis

1429

C.4. Integration of telemetry and GIS

Estimating hydraulic parameters and geometric characteristics of a river from remote sensing data using optimisation methods
H. Roux & D. Dartus

1443
