Special session: Synchronization Techniques (1/2)
Chaired by Marie-Laure Boucheret, ENST/COMELEC, Toulouse

The true Cramer-Rao bound for carrier and symbol synchronization
Noels Nele, Steendam Heidi, Moeneclaey Marc

On the Maximum-Likelihood based data-aided frequency offset and channels estimates
Ciblat Philippe, Vandendorpe Luc

Self-adaptive PLL for general QAM constellations.
Brossier Jean-Marc, Amblard Pierre-Olivier, Geller Benoît

Estimation of the symbol period: the frequency offset case
Houcke Sebastien, Chevreuil Antoine, Ciblat Philippe

Poster session: Channel Estimation and Equalization
Chaired by Daniel Roviras, ENSEEIHT-TéSA, Toulouse, France

Constant Norm Algorithms Class
Goupil Alban, Palicot Jacques

Effects of channels introducing time-variant delays on generalized almost-cyclostationary signals
Izzo Luciano, Napolitano Antonio

Kalman Smoothing Based Channel Estimation for Space-Time Block Coding
Enescu Mihai, Koivunen Visa

Propagation delay estimation in asynchronous DS/CDMA using multiple antennas
Sirbu Marius, Koivunen Visa

Multi-Split Equalizers for HDSL Channels
Souza Richard, Resende Leonardo, Rocha Carlos Aurélio, Bellanger Maurice

A time-frequency synchronization algorithm for MC-CDMA systems in LMDS applications
Gelli Giacinto, Darsena Donatella, Verde Francesco

Channel Precoder with Nonuniform Sampling Equalizer
Kwan Man-Wai, Kok Chi-Wah

A Novel Channel Estimation Algorithm Applied to UTRA-FDD
Rice Garrey, Stirling Iain, Garcia-Alis Daniel, Stewart R. W.

Joint Zero-Forcing and Matched Filter Processing in an Adaptive Equalizer Using the Linearly Constrained
Least-Mean Square Algorithm
Harris Fred, Bologna Frank

Oral session: Filter Design
Chaired by Maurice Bellanger, CNAM

Defining the wordlength of the fractional interval in interpolation filters
Lopez Francisco, Vesna Jussi, Renfors Markku
Design of FIR predictors as a tapped cascaded interconnection of subfilters
Vainio Olli ............................................................... 1.683

Multiplierless implementation of all-pole digital filters using a low-sensitivity structure
Bhattacharya Mrinmoy, Saramäki Tapio ........................................ 1.687

Multiplierless implementation of bandpass and bandstop recursive digital filters using low-sensitivity transformation
Saramäki Tapio, Bhattacharya Mrinmoy ....................................... 1.691

On the design and multiplier-less realization of digital IF for software radio receivers
Yeung Kim Sang, Chan Shing Chow ......................................... 1.695

Oral session: Watermarking
Chaired by Benoit Macq, Catholic University of Louvain, Belgium ............................ 1.699

Analysis and improvement of correlation-based watermarking methods for digital images
Miyazaki Akio, Okamoto Akihiro ............................................. 1.701

Detectability and Annoyance of Artifacts in Watermarked Digital Videos
Farias Mylene, Carli Marco, Foley John, Mitra Sanjit ......................... 1.705

Use of synchronisation pattern to estimate geometric distortions
Baudry Severine, Nguyen Philippe, Maître Henri .............................. 1.709

Audiowatermark Detection for All-pass Pirat Attack: Hybrid Blind Equalization/Wienr Deconvolution Approach
Larbi Sonia, Jaidane Mériem, Moreau Nicolas ................................... 1.713

Scrambling-based Watermarking for MPEG-4 Video
Vassaux Boris, Nguyen Philippe, Baudry Severine, Bas Patrick, Chassery Jean-Marc .... 1.717

Special session: Blind Source Separation / Independent Component Analysis (2/2)
Chaired by Yannick Deville, University Paul Sabatier, France ......................... II.1

On-line Source Separation of Temporally Correlated Signals
Tomé Ana Maria, Ferreira Nuno ................................................. II.3

Blind Identifiability of Class of Nonlinear Instantaneous ICA Models
Erikson Jan, Koivunen Visa ..................................................... II.7

A Geometric Approach For Separating Post Non-Linear Mixtures
Babaie-Zadeh Massoud, Jutten Christian, Nayebi Kambiz ......................... II.11

Comparison of Time-Domain ICA, Frequency-Domain ICA and Multistage ICA for Blind Source Separation
Nishikawa Tsuyoki, Saruwatari Hiroshi, Shikano Kiyohiro ......................... II.15

Analysis and control of the stability of a differential separation method for underdetermined convolutive mixtures
Deville Yannick .............................................................. II.19
Special session: Synchronization Techniques (2/2)
Chaired by Marie-Laure Boucheret, ENST/COMELEC, Toulouse II.23
Another Turbo-Something: Carrier Synchronization
Giugno Luca, Lottici Vincenzo, Luise Marco II.25
Impact of phase noise on carrier phase estimation at Ka-Band
Morlet Catherine, Boucheret Marie-Laure II.31
ML DA timing estimation for multiuser FB uplink transmission over static time dispersive channels
Sartenaer Thierry, Vandendorpe Luc II.35
Optimized directed decision frequency synchronization systems in presence of Gaussian noise and oscillator phase noise
Hélard Jean-François, Bougeard Stéphane II.39

Special session: Non linear Techniques for Channel Equalization (1/2)
Chaired by Sergios Theodoridis, University of Athens, Greece II.43
Adaptive SVC for nonlinear channel equalization
Pérez-Cruz Fernando, Artes-Rodriguez Antonio II.45
Using a normalised LMF algorithm for channel equalisation with co-channel interference
Chan Mun Keat, Cowan Colin II.49
Predistorsion of non-linear satellite channels using neural network: architecture, algorithm and implementation
Langlet Fabien, Abdulkader Hasan, Roviras Daniel II.53
A novel cluster based MLSE equalizer for 2-PAM signaling scheme
Kopsinis Yannis, Theodoridis Sergios II.57
Robustness of the finite-length MMSE-DFE with respect to channel and second-order statistics estimation errors
Liavas Athanasios II.61

Poster session: Blind Identification and Deconvolution
Chaired by Lieven De Lathauwer, ETIS (ENSEA,UCP), Cergy-Pontoise, France II.65
Blind Separation of Non Stationary Non Gaussian Sources
Pham Dinh-Tuan II.67
Blind Deconvolution with Minimum Renyi's Entropy
Erdogmus Deniz, Príncipe José, Vielva Luis II.71
Blind Separation of Uncorrelated Sources
Erdogmus Deniz, Hild II Kenneth E., Príncipe José, Vielva Luis II.75
SVD-ICA: A New Tool to Enhance the Separation Between Signal and Noise Subspaces

Vrabie Valeriu, Mars Jerome ............................................................... II.79

Blind Identification of ARMA Systems using the Discrete Random Decrement

Antoni Jérôme, Sidahmed Ménad ....................................................... II.83

Blind deconvolution of seismic data

Lacoume Jean-Louis, Guy Canadas .................................................. II.87

Recovery of a high shock probability process using blind deconvolution

Combet François, Martin Nadine, Jaussaud Pierre ............................. II.91

Third-order Cyclic Characterization of Vibration Signals in Rotating Machinery

Raad Amani, Antoni Jérôme, Sidahmed Ménad ................................ II.95

On the blind separation of non-circular sources

De Lathauwer Lieven, De Moor Bart .............................................. II.99

higher order blind separation of non zero-mean cyclostationary sources

Ferréol Anne, Chevalier Pascal, Albera Laurent ............................. II.103

New contrasts for blind separation of non iid sources in the convolutive case

Castella Marc, Pesquet Jean-Christophe, Petropulu Athina P. .......... II.107

A Renyi Entropy convolution inequality with Application

Bercher Jean-Francois, Vignat Christophe ...................................... II.111

A weighted mixed statistics algorithm for blind source separation

Klajman Maurice, Constantinides Anthony G. ............................... II.115

Using Farther Correlations to Further Improve the Optimally-Weighted SOBI Algorithm

Yeredor Arie, Doron Eran .............................................................. II.119

Oral session: Image and Video Coding

Chaired by Murat Kunt, EPFL, Switzerland ...................................... II.123

Low bit rate video compression using relative fractal coding

Mukhopadhyay Jayanta, Ghosh S.K. ............................................... II.125

MRC for Compression of Colored Engravings

Misic Vladimir, Parker Kevin, Buckley Robert ............................... II.129

Low Complexity Multiple Description Coding Scheme using Wavelet Transform

Pereira Manuela, Antonini Marc, Barlaud Michel ............................. II.133

A low-complexity postprocessing algorithm for block based video coding

Maddikonda Ravikanth, K. Adhikary Tushar ................................ II.137

Efficient Structure of Video Coders with Motion-Compensated Fine-Granularity Scalability

Domanski Marek, Mackowiak Slawomir, Blaszak Lukasz .................. II.141
Oral session: Adaptive Filtering
Chaired by Colin Cowan, Queens university of Belfast, UK II.145

Degradation Analysis for Interpolated Wiener Filtering
Resende Leonardo, Rocha Carlos Aurélio, Bellanger Maurice II.147

Construction of adaptive wavelets using update lifting and quadratic decision criteria
Pesquet-Popescu Beatrice, Piella Gemma, Heijmans Henk II.151

A pipelined Fast Newton Transversal Filter
Glentis George II.155

General parameter-based adaptive predictors
Vainio Olli II.159

Comparative analysis of adaptive subband structures with critical sampling
Petraglia Mariane, Vasconcellos Renata II.163

Special session: Applications of Particle Filtering in Communications (1/2)
Chaired by Petar Djuric, University of Stony Brook, New-York, USA II.167

Applications of Particle Filtering to Communications: A Review
Djuric Petar, Zhang Jianqiu, Ghirmai Tadesse, Huang Yifei, Kotecha Jayesh II.169

On the use and misuse of particle filtering in digital communications
Punkaya Elena, Doucet Arnaud, Fitzgerald William II.173

Bayesian algorithms for the passive location of a stationary emitter by a moving platform
Liew Michael, Lee Dominic, Chia Nicholas, Cheng Kok Ping II.177

Sequential Monte Carlo for Mobility Management in Wireless Cellular Networks
Yang Zigang, Wang Xiaodong II.181

Tracking of a Brownian phase with linear drift: algorithms and performances.
Amblard Pierre-Olivier II.185

Oral session: Filter Optimization
Chaired by Wolfgang Mecklenbraeuker, Vienna university of technology, Austria II.189

On Convex Stability Domain and Optimization of IIR Filters
Dumitrescu Bogdan II.191

Closed form expressions for optimum FIR polynomial predictive filtering
Psarakis Emmanouil, Moustakides George II.195

Minimax Design of 2-D FIR Filters with Low Group Delay Using Convex Optimization
Lu Wu-Sheng II.199

On the choice of a basis for a linear-in-the-parameters model
Oliveira E Silva Tomas II.203
Truncation Noise Analysis of Noise Shaping DSP Systems with Application to CIC Decimators
Lehtinen Vesa, Renfors Markku ................................................................. II.207

Poster session: Implementation
Chaired by Michel paindavoine, University of Bourgogne, Dijon, France, ___ II.211

Syndex executive development for DSPs TI C6x applied to real-time and embedded multiprocessors architectures
Nezan Jean Francois, Le Mener Yann, Raulet Mickael, Kountouris Apostolos, Moy Christophe .... II.213

Hartley Transform Based Architecture for Time-Frequency Analysis and Time-Varying Filtering
Stankovic Srdjan, Ivanovic Veselin, Stankovic Ljubisa ........................................ II.217

Radix-2 Multi-Dimensional Transposition-Free FFT Algorithm for Modern Single Instruction Multiple Data (SIMD) Architectures
Rodriguez Paul ................................................................. II.221

Optimising the Implementation of a FFT-based Multicarrier CDMA Receiver
Grant Peter, McCormick Andrew, Thompson John, Arslan Tughrul, Erdogan Ahmet ................. II.225

Multithreaded Systolic Computation
Sernec Radovan, Zajc Matej, Tasic Jurij ............................................................. II.229

3G FDD Rapid Prototyping and Training
Garcia-Alis Daniel, Stirling Iain, Rice Garrey, Macpherson Kenneth, Freeland Graham ........... II.233

Real time implementation of a face tracking
Malasne Nicolas, Yang Fan, Paindavoine Michel .............................................. II.237

Alternative Least Mean Square Adaptive Filter Architectures for Implementation on Field Programmable Gate Arrays
Mullins Sinead, Heneghan Conor ............................................................. II.241

Implementation of Median-LMS Adaptive Filters Using Power-of-Two Multiplication in the Adaptation Arithmetic
Macleod Malcolm ............................................................. II.245

Architecture and application partitionning for reconfigurable system design
Karim Ben Chehida, Michel Auguin, Sebastien Raimbault ..................................... II.249

A high-level development tool dedicated to the generation of cores for the implementation of image-processing applications
Fresse Virginie, Marshall Stephen, Deforges Olivier ........................................ II.253

Oral session: Image Filtering
Chaired by Moncef Gabbouj, Tampere university of Technology, Finland ___ II.257

Implementation issues in 2-D filter bank design based on matrix
Tchobanou Mikhail, Woodburn Cynthia .......................................................... II.259

Optimum non linear document restoration through linear greyscale operators
Marshall Stephen ............................................................. II.262
Directional Anisotropic Diffusion
*Terebes Romulus, Lavialle Olivier, Baylou Pierre, Borda Monica* ........................................ II.266

The Bussgang algorithm for multichannel blind image restoration
*Panci Giampiero, Campisi Patrizio, Colonnese Stefania, Scarano Gaetano* .......................... II.270

Linear Colour-Dependent Image Filtering based on Vector Decomposition
*Sangwine Stephen, Gatsheni Barnabas, Ell Todd* .......................................................... II.274

**Special session: Non linear Techniques for Channel Equalization (2/2)**
*Chaired by Sergios Theodoridis, University of Athens, Greece* .............................. II.279

Combined equalization and alien crosstalk cancellation in ADSL receivers
*Vanbleu Koen, Ysebaert Geert, Moonen Marc, Vandaele Piet* ........................................ II.281

A (semi)-blind equalization technique for wireless burst transmission systems
*Rontogiannis Athanasisos, Berberidis Kostas, Marava Alexandra* ............................... II.285

Adaptive blind equalization through quadratic pdf matching
*Santamaria Ignacio, Pantaleon Carlos, Vielva Luis, Principe José* ................................. II.289

multiple-input turbo equalization over time-varying frequency selective channels
*Laot Christophe, Lebidan Raphael, Leroux Dominique* ................................................ II.293

Semiblind Direct Equalisation using Mutually Referenced Equalisers
*Trindade Antonio, Van Der Veen Alle-Jan* ............................................................... II.297

**Special session: Applications of Particle Filtering in Communications (2/2)**
*Chaired by Petar Djuric, University of Stony Brook, New-York, USA* ........ II.301

Sequential Monte Carlo simulation of dynamical models with slow-varying parameters: An extension
*Fong William, Godsill Simon* .......................................................... II.303

Multiuser Detection with Particle Filtering
*Zhang Jianqiu, Huang Yafei, Djuric Petar* .......................................................... II.307

Particle Filters for Positioning in Wireless Networks
*Nordlund Per-Johan, Gunnarsson Fredrik, Gustafsson Fredrik* .................................. II.311

Evaluation of sequential importance sampling for blind deconvolution via a simulation study
*Ali R. Ayesha, Richardson Thomas S., Marua Alejandro, Roy Sumit* ........................ II.315

A Particle filtering Technique for Jump Markov Systems
*Davy Manuel, Andrieu Christophe, Doucet Arnaud* ................................................ II.319

**Plenary session: Plenary 3** ........................................................................ II.323

Image Processing for High Resolution Satellite and Aerial Data
*Zerubia Josiane* .......................................................... II.325
Oral session: Signal Reconstruction  
Chaired by Alfred Hero, University of Michigan, Ann Arbor, USA  II.333

An Efficient, Robust, and Fast Converging Principal Components Extraction Algorithm: SIPEX-G  
Erdogmus Deniz, Rao Yadunandana N., Principe Jose, Fontenla-Romero Oscar, Vielva Luis  II.335

Spectral widening of telephone speech using an extended classification approach  
Kornagel Ulrich  II.339

Packet Loss Concealment Using Audio Morphing  
Bouteille Franck, Scalart Pascal, Kovessi Balazs  II.343

The energy expense of superoscillations  
Ferreira Paulo, Kempf Achim  II.347

A New Speech Synthesis Based on Fractal  
Fekkai Souhila, Al-Akaidi Marwan, Blackledge Jonathan  II.351

Poster session: Telecommunications  
Chaired by Guy Lestievent, CNES, Toulouse, France  II.355

Channel prediction for adaptive coded modulation in Rayleigh fading  
Oien Geir E., Holm Henrik, Hole Kjell J.  II.357

Generalized Decision Error Probability for Linear Equalization Using M-ary PAM Transmission  
Yen Rainfield, Liu Hong-Yu, Chen Jin-Qun  II.361

Spline pulse shaping with isi-free matched filter receiver  
Ibñez Jesus, Pantaleon Carlos, Diez Jose, Santamaria Ignacio  II.365

Error Resilient Virtual SPIHT For Image Transmission Over Noisy Channels  
Khan Ekram, Ghanbari Mohammed  II.369

Uplink versus downlink wireless mobile positioning in umts cellular radio systems  
Muhammad Wrya, Grosicki Emmanuel, Abed Meraim Karim, Delmas Jean-Pierre, Desbouvries Francois  II.373

Synthesis of minimal cost nonlinear feedback shift registers  
Linardatos Dionisis, Kaloupisidis Nicholas  II.377

Double Talk Cancellation in Echo Cancelled DMT-systems  
Ysebaert Geert, Vanbleu Koen, Cuypers Gert, Moonen Marc, Van Acker Katleen  II.381

Error-Resilient Coding and Forward Error Correction for Image Transmission over Unreliable Channels  
Boulgouris Nikolaos, Thomos Nikolaos, Strintzis Michael  II.385
Oral session: Image Representation and Transformation  
Chaired by Giovanni Sicuranza, University of Trieste  II.389

High Resolution 3D Spectral Method Estimation  
Aksasse Brahim, El Ansari Mohamed, Berthoumieu Yannick, Najim Mohamed  II.391

Evolutionary Multiresolution Matching Pursuit and its relations with the Human Visual System  
Figueras I Ventura Rosa M., Vandergeynst Pierre, Frossard Pascal  II.395

Parallelisation of the Overlap-Add Block-Filter Algorithm for Image Processing  
Aziz Mohamed, Boussakta Said  II.399

3-D Fast algorithm for the 3-D new Mersenne number transform  
Boussakta Said, Alshibami Osama  II.403

Spline Mojette transform. Applications in tomography and communications  
Guédon Jean-pierre, Normand Nicolas  II.407

Special session: Space-Time Processing / Coding for Communications (1/2)  
Chaired by Miguel Lagunas and Ana Pérez-Neira, UPC, Barcelona, Spain  II.411

Performance of Space-Frequency Coded Broadband OFDM under Real-World Propagation Conditions  
Boelcskei Helmut, Borgmann Moritz, Arogyaswami J. Paulraj  II.413

Trained Space-Time Block Decoding For Fading Channels With Frequency Offsets  
Stoica Petre, Ganesan Girish  II.417

Joint Transceiver Optimization in Wireless Multiuser MIMO-OFDM Channels based on Simulated Annealing  
Pascual Iserte Antonio, Pérez-Neira Ana I., Lagunas Hernández Miguel Ángel  II.421

Per-Tone Chip Equalization for Space-Time Block Coded Single-Carrier Block Transmission DS-CDMA Downlink  
Petre Frederik, Leus Geert, Deneire Luc, Moonen Marc, Engels Marc  II.425

Special session: Signal and Image Processing for Space Applications (1/2)  
Chaired by Catherine Lambert-Nebout and Alain Giros, CNES ,Toulouse, France  II.429

From Image Processing Concepts to Instrument Design in Remote Sensing Satellites  
Goudy Philippe, Kubik Philippe, Rougé Bernard, Latry Christophe  II.431

Advances and Prospects in SAR missions and Instruments  
Suchandt Steffen, Eineder Michael, Adam Nico, Holzner Jürgen  II.435

Information Extraction from high resolution SAR data  
Adragna Frédéric, Datcu Mihai, Hajnsek Irena, Inglada Jordi, Papathanassiou Kostas, Petit David  II.439
Oral session: Image Restoration
Chaired by Josiane Zérubia, INRIA, Nice

Selective image-sharpness enhancement by coupled nonlinear reaction-diffusion time-evolution and its practical application
Saito Takahiro, Satsumabayashi Jun, Yashiro Kentarou, Komatsu Takashi

Total variation image restoration with local constraints
Bertalmio Marcelo, Caselles Vicent, Rougé Bernard, Solé Andrés

A minimax-constrained superresolution algorithm for remote sensing imagery
Magli Enrico, Olmo Gabriella

Image Resolution-Variance Tradeoffs Using the Uniform Cramer-Rao Bound
Kragh Thomas, Hero Alfred

Improved POCS-based image reconstruction from irregularly-spaced samples
Stasinski Ryszard, Konrad Janusz

Poster session: Video Coding and Processing
Chaired by Ferran Marques, UPC, Barcelona, Spain

Improvement of the lossless compression of images with quasi-sparse histograms
Pinho Armando, Neves Antonio

Video Coding Based on Seamless Combination of Motion Compensation and Matching Pursuits
Matsuda Ichiro, Itoh Susumu

Comparison of lossless codecs for satellite and MRI medical images
Bekkouche Hocine, Barret Michel

Optical Flow Constraint Equation Exended To Transparency
Pingault Mathias, Pellerin Denis

Removing Moire from Degraded Video Archives
Sidorov Denis, Kokaram Anil

Improving lossy image compression Wavelet transform based algorithms by predicting discarded coefficients
Gil Pita Roberto, Rosa Zurer Manu, Pérez-Cruz Fernando

Lossless JPEG2000 Coding for Lossy Images and its Applications
Watanabe Osamu, Kiya Hitoshi

Improved Vector Quantization for Lossless Compression of AVIRIS Images
Mielikainen Jarno, Toivanen Pekka

Histogram packing, total variation, and lossless image compression
Ferreira Paulo, Pinho Armando

Reduction of Quantization Error With Adaptive Wiener Filter in Low Bit Rate Coding
Kuo Ching-Chih, Chang Wen-Thong

Video Object Coding and Rendering for Panoramic Video
Chan Kin-Lok, Chan Shing Chow .................................................. II.506

High Performance Coding using a Model-based Bit Allocation and EBCOT
Parisot Christophe, Antonini Marc, Barlaud Michel .................................. II.510

Parametric probability models for lossless coding of natural images
Ye Hua, Deng Guang, Devlin John .................................................. II.514

A Block-Based Predictive Lossless Coder for Quincunx Multispectral Images
Benazzza-Benyahia Amel, Pesquet Jean-Christophe .................................. II.518

Nonlinear Polyphase Image Rate Conversion
Franzen Ortwin, Schröder Hartmut .................................................. II.522

Sub-Picture Video Coding for Unequal Error Protection
Hannuksela Miska, Wang Ye-Kui, Gabbouj Moncef .................................. II.526

Oral session: Multirate and Filterbanks
Chaired by Sanjit K. Mitra, University of California, Santa Barbara, USA — II.531

The Lifting Theory and The Design of Biorthogonal Filter Banks
Fahmy Mamdouh F., El-Raheem Gamal M. ......................................... II.533

Programmable Modified Fractional Comb Decimation Filter
Babic Djordje, Renfors Markku ..................................................... II.537

A fast design method for biorthogonal modulated filter banks
Siohan Pierre, Pinchon Didier, Siclet Cyrille ..................................... II.541

Polynomial extension method for size-limited paraunitary filter banks
Domínguez Jimenez M. Elena, Gonzalez Prelcic Nuria ......................... II.545

A Class of Perfect-Reconstruction Nonuniform Cosine-Modulated Filter-Banks with Dynamic Recombination
Xie X.M., Chan S.C., Yuk T. I. .................................................... II.549

Special session: Space-Time Processing / Coding for Communications (2/2)
Chaired by Miguel Lagunas and Ana Perez-Neira, UPC, Barcelona, Spain — II.553

Bandwidth efficient SDMA multicarrier systems with frequency domain diversity
Gorokhov Alexei .......................................................... II.555

Interference Rejection in Systems Employing Transmit Diversity
Klang Göran, Ottersten Björn ..................................................... II.559

Capacity of MIMO Channels: Asymptotic Results for Correlated Fading
Mestre Xavier, Fonollosa Javier R., Pagès Alba ................................ II.563

MAP Space-Time Receivers for GSM in Subway Tunnel Environments
González-López Miguel, Dapena Adriana, Castedo Luis ..................... II.567
Special session: Signal and Image Processing for Space Applications (2/2)
Chaired by Catherine Lambert-Nebout and Alain Giros, CNES, Toulouse, France _ II.571

New concepts for Earth observation data catalogues
_Datcu Mihai, Giros Alain_ .................................................. II.573

On-Board Payload Data Processing Systems / On-board Networks for Future Missions
_Armbruster Philippe, Gasti Wahida_ ........................................ II.577

Overview And General Principles Of Source Coding, Channel Coding & Modulation In CCSDS And DVB-S Standards
_Moury Gilles, Ribes André, Lesthievent Guy_ .............................. II.581

Use of fade mitigation techniques for broadcasting and news gathering satellite applications in Ka band
_Cornet Frederic, Bazile Caroline, Duverdier Alban_ ...................... II.585

Poster session: Filter Design / Fast Algorithms
Chaired by Maurice Bellanger, CNAM ........................................ II.589

Iterative method for creating wavelet dictionaries
_Rautiainen Mikko, Malmivuo Jaakko_ ................................. II.591

Arbitrary Sampling Rate Conversion of Complex Signals
_Evangelista Gennaro, Gökler Heinz_ ........................................ II.595

A Causal Optimal Filter of the Second Degree
_Torokhti Anatoli, Howlett Phil, Pearce Charles_ ........................ II.599

Adaptive local polynomial Fourier transform
_Dakovic Milos, Djurovic Igor, Stankovic Ljubisa_ ................... II.603

Generation of Ultraspherical Window Functions
_Bergen Stuart, Antoniou Andreas_ ........................................ II.607

A Novel Simple Adaptive Spectral Analysis Zoom For Narrow-Band Signals
_Hossen Abdulnasir, Heute Ulrich_ ........................................ II.611

New design method of FIR filters with SP2 coefficients based on a new linear programming relaxation with triangle inequalities
_Ito Rika, Fujie Tetsuya, Suyama Kenji, Hirabayashi Ryuichi_ ................ II.615

DCT computation using real-valued DFT algorithms
_Stasinski Ryszard_ ................................................................. II.619

A new way to invert the sliding Fourier transform and its application to signal separation
_Dapena Adriana, Serviere Christine_ .................................... II.623

An Audio Motivated Hybrid of Warping and Kautz Filter Techniques
_Paatero Tuomas_ ................................................................. II.627
Oral session: Subspace Detection and Estimation  
Chaired by Jean-François Cardoso, ENST, Paris, France ____________ II.631

A unified framework for fast extraction of principal and minor components  
Ouyang Shan, Ching P.C. .................................................. II.633

Quaternion subspace method for vector-sensor wave separation  
Le Bihan Nicolas, Mars Jerome ........................................... II.637

Robust Subspace Tracking Based Blind Channel Identification In Impulsive Noise Environment  
Wen Yu, Chan S.C., Ho K.L ................................................ II.641

Subspace detectors for multichannel signals  
Olmos Salvador, Martinez Juan Pablo, Sörnmo Leif ................... II.645

Robust non-Gaussian Matched Subspace Detectors  
Desai Mukund, Mangoubi Rami ........................................... II.649

Oral session: Industrial Applications  
Chaired by Nadine Martin, LIS - ENSIEG, Grenoble, France __________ III.1

Nonstationary Methods and application to Noisy Ultrasound Doppler  
Kouamé Denis, Girault Jean-Marc, Chemla Jean-Paul, Reméniéras Jean-Pierre, Lethiecq Marc ...... III.3

Application of the overcomplete wavelet transform for underwater transitory signal characterization  
Ioana Cornel, Freza-Boin Krystel, Quinquis Andre .................. III.7

Blind detection of an elliptically polarized wave in three-component seismic measurement  
Nagano Koji ................................................................. III.11

Investigation of Digital TV-Terrestrial Signal for Radar Application  
Saini Rajesh, Cherniakov Mike ............................................ III.15

A New Matrix Method for Pulse Train Identification  
Shahhsoeini Hadi Shahrir, Naseri Ali, Naderi Madjid ................ III.19

Special session: Multi-Carrier / OFDM (1/2)  
Chaired by Ananthram Swami, Army research lab, Washington DC, USA Sergio Barbarossa, University of Rome, La Sapienza, Italy ____________ III.23

MMSE Estimation of Time-Varying Channels for DVB-T Systems with Strong Co-Channel Interference  
Schaflhuber Dieter, Matz Gerald, Flawatsch Franz, Loubaton Philippe ......................... III.25

On blind frequency-offset synchronization for OFDM communications  
Ghogho Mounir .............................................................. III.29

Optimum signaling for MIMO-OFDM systems with interference  
Ye Sigen, Blum Rick S. ..................................................... III.33

On the maximum common rate in multiple access channels  
Barbarossa Sergio, Scutari Gesualdo ................................... III.37
