ICSE 2005 WADS

Workshop on Architecting Dependable Systems

St. Louis, Missouri - USA
17 May, 2005

http://www.cs.kent.ac.uk/wads
ICSE 2005
Workshop on Architecting Dependable Systems (WADS)

Table of Contents

Rigorous Design

Improving System Dependability by Enforcing Architectural Intent ............................................ 1
Marwan Abi-Antoun, Jonathan Aldrich, David Garlan, Bradley Schmerl, Nagi Nahas, Tony Tseng

An Architectural Pattern for Non-functional Dependability Requirements ............................. 8
Lihua Xu, Hadar Ziv, Debra Richardson, Thomas Alspaugh

Specifying Adaptation Semantics .............................................................................................. 14
Ji Zhang, Betty Cheng

A Framework for Analyzing Exception Flow in Software Architectures .............................. 21
Fernando Castor Filho, Patrick H. S. Brito, Cecilia Mary F. Rubira

Failure Modelling in Software Architecture Design for Safety .............................................. 28
Weihang Wu, Tim Kelly

Verification & Validation

Towards Software Architecture-based Regression Testing ...................................................... 35
Henry Muccini, Marcio Dias, Debra Richardson

Fault Tolerance

Computing Optimal Self-Repair Actions: Damage Minimization versus Repair Time ....................... 42
Matthias Tichy, Holger Giese, Daniela Schilling, Wladimir Pauls

Architectural Runtime Configuration Management in Support of Dependable Self-Adaptive Software .................................................................................................................. 48
John Georgas, Andre van der Hoek, Richard Taylor

Architectural Support for Mode-Driven Fault Tolerance in Distributed Applications ....................... 54
Deepti Srivastava, Priya Narasimhan

A UAV Test and Development Environment Based on Dynamic System Reconfiguration ........................................... 61
Osamah Rawashdeh, Garrett Chandler, James Lumpp

System Evaluation

Representing Design Tradeoffs in Safety-Critical Systems ...................................................... 68
Jennifer Morris, Philip Koopman

Sensitivity Analysis for a Scenario-Based Reliability Prediction Model .................................... 73
Genaina Nunes Rodrigues, David S. Rosenblum, Sebastian Uchitel

Availability Simulation of Peer-to-Peer Architectural Styles .................................................. 78
Simon Giesecke, Timo Warns, Wilhelm Hasselbring
