Proceedings of the 2nd International Driving Symposium on Human Factors in Driver Assessment, Training and Vehicle Design

Grand Summit Resort Hotel
Park City, Utah, USA
July 21-24, 2003
TABLE OF CONTENTS

Preface ........................................................................................................................................ i
Driving Assessment 2003 Committees ......................................................................................... ii
Driving Assessment 2003 Sponsors ................................................................................................. iii
Acknowledgments .......................................................................................................................... iv
Table of Contents .......................................................................................................................... v

On the Assessment of Criteria for Driver Impairment: In Search of the Golden
Yardstick for Driving Performance Karel Brookhuis, Dick de Waard (University of Groningen
— The Netherlands) .................................................................................................................... 1

Multiple Resource Modeling of Task Interference in Vehicle Control, Hazard
Awareness and In-Vehicle Task Performance William J. Horrey, Christopher D. Wickens
(University of Illinois at Urbana-Champaign) ................................................................................ 7

Loading Drivers to Their Limit: The Effect of Increasing Secondary Task on
Driving Natasha Merat (University of Leeds — UK) ...................................................................... 13

Mental Workload as a Function of Traffic Density: Comparison of Physiological,
Behavioral, and Subjective Indices Carryl L. Baldwin, Joseph T. Coyne (Old Dominion
University) ..................................................................................................................................... 19

Fatal Distraction? A Comparison of the Cell-Phone Driver and the Drunk Driver
David L. Strayer, Frank A. Drews, Dennis J. Crouch (University of Utah) .................................... 25

Driver Navigation and Safety Errors in Alzheimer's Disease and Stroke Ergun Y. Uc,
Jennifer L. Smothers, Qian Shi, Matthew Rizzo (University of Iowa) ........................................ 31

Older and Younger Driver Performance at Complex Intersections: Implications for
Caird, A.M. Lamsdale, S.L. Chisholm (University of Calgary — Canada) ................................... 33

Can High-Risk Older Drivers Be Identified in a DMV Setting with a Brief Battery of
Functional Tests? Karlene Ball (University of Alabama at Birmingham), Daniel Roenker (Western
Kentucky University), Gerald McGwin, Jr., Virginia Wadley, Jeff Edwards (University of Alabama at
Birmingham), R. Raleigh (Maryland Motor Vehicle Administration) ......................................... 39

An Abstract Virtual Environment Tool to Assess Decision-Making Impaired
Drivers Matthew Rizzo (University of Iowa), Joan Severson, James Cremer, Kerri Price (Digital
Artefacts, LLC) ............................................................................................................................ 40
Visual Attention in Stroke Patients Returning to Driving Matthew L. Tofield, John P. Wann
(University of Reading — UK) ........................................................................................................................................ 48

Effects of Cell Phone Conversation Difficulty on Driving Performance Mick Rakauskas
(University of Minnesota), Leo Gugerty (Clemson University) ........................................................................................................................... 49

Commuter Behavioral Model for the Pilot Program of an Electronic Toll System on
Korean Express Highways Kyungwoo Kang (Hanyang University — Korea) .................................................. 51

In-Vehicle Navigation Systems: Interface Characteristics and Industry Trends
Robert E. Llaneras, Jeremiah P. Singer (Westat) ......................................................................................................... 52

Truck Driver Training Using Simulation in England Andrew M. Parkes (TRL Limited
(Transport Research Laboratory) — UK) ............................................................................................................................... 59

Effects of Cognitive Tasks on Drivers' Eye Behavior and Performance Xianjun Sam
Zheng, Yu-chi Tai, George W. McConkie (University of Illinois at Urbana-Champaign) .............................................. 64

Reliability of a Road Test After Stroke Abiodun Emmanuel Akinwuntan, Willy De Weerdt,
Hilde Feys (Katholieke Universiteit Leuven — Belgium), Guido Baten, Patricia Arno (CARA, Belgian
Road Safety Institute — Belgium), Carlotte Kiekens (Katholieke Universiteit Leuven — Belgium) .............. 65

Evaluating Workload Associated with Telematic Devices via a Secondary Task
Protocol Mustapha Mouloua, Edward Rinalducci, Peter A. Hancock, J. Christopher Brill (University of
Central Florida) ................................................................................................................................................................. 67

Driver Preference of Collision Warning Strategy and Modality Joshua D. Hoffman,
John D. Lee (University of Iowa), Elizabeth M. Hayes (Daimler Chrysler) .............................................................. 69

Szalma (University of Central Florida) .............................................................................................................................. 70

Role of a Driver Cognition Model in the Design of an Anti-Collision Warning
System P. C. Cacciabue, M. Martinetto (European Commission, Joint Research Centre — Italy), L.
Andreone, F. Tango (Centro Ricerche Fiat — Italy), A. Amditis, A. Polychronopoulos (Institute of
Communications and Computer Systems — Greece), D. Kempl, H. Widlother (Fraunhofer IAO —
Germany) ........................................................................................................................................................................ 73

Steering a Driving Simulator Using the Queueing Network-Model Human Processor
(QN-MHP) Omer Tsimhoni, Yili Liu (University of Michigan) ............................................................................................ 81

A Systemic Model for Driver-in-Control Erik Hollnagel (University of Linköping — Sweden),
Arne Nåbo (Saab Automobile AB — Sweden), Ian V. Lau (General Motors Corporation) ........................................... 86

Novice Driver Training Results and Experience with a PC Based Simulator
R. Wade Allen, George Park, Marcia Cook, Theodore J. Rosenthal (Systems Technology, Inc.), Dary Fiorentino (Southern California Research Institute), Erik Viirre (University of California at San Diego) ............... 165

Assessing Spare Attentional Capacity of Drowsy Drivers: Protocol Development
J. Christopher Brill, Mustapha Mouloua, Peter A. Hancock, Richard D. Gilson (University of Central Florida), Robert S. Kennedy (RSK Assessments, Inc.) ........................................................................................................................................................................ 171

Influences of Knowledge on Behavior in Automobiles
S. David Leonard (University of Georgia) ........................................................................................................................................................................ 173

Traffic Scene Related Change Blindness in Older Drivers
Sarah Batchelder, Matthew Rizzo (University of Iowa), Rick Vanderleest (Digital Artefacts, LLC), Shaun P. Vecera (University of Iowa) ........................................................................................................................................................................ 177

Aggressive Driving Is a Major Cause of Traffic Accidents and Road Rage in Jordan
Mohd R. Suliman, Wa’el H. Awad (Al-Balqa’ Applied University — Jordan) ................................................................................................................. 182

Inattentional Blindness While Driving
Chip Wood (Motorola Labs), Rob Gray, Jennifer Young (Arizona State University East), John Summers, Kari Torkkola, Noel Massey (Motorola Labs) ................................................................................................................. 188

Simulator Training Improves Driver Efficiency: Transfer from the Simulator to the Real World
David L. Strayer, Frank A. Drews (University of Utah) ........................................................................................................................................................................ 190

On the Fast Lane to Road Rage
Frank A. Drews, David L. Strayer, Bert N. Uchino, Timothy W. Smith (University of Utah) ........................................................................................................................................................................ 194

Test-Retest Reliability of Standard Deviation of Lane Position as Assessed on a PC-Based Driving Simulator
Thomas D. Marcotte, Erica Roberts (University of California, San Diego), Theodore Rosenthal (Systems Technology, Inc.), Robert Heaton, Heather Bentley, Igor Grant (University of California, San Diego) ................................................................................................................. 199

Demographic and Driving Performance Factors in Simulator Adaptation Syndrome
Matthew Rizzo, Rebecca A. Sheffield, Laura Stierman, Jeffrey Dawson (University of Iowa) ................................................................................................................. 201

Simulation Methods for Assessing Driving on Roads with Curves
John A. Molino (Science Applications International Corporation), Duoduo Liao, John M. Wink, Jason R. Williams (AAI Engineering Support, Inc.), Kenneth S. Opiela, M. Joseph Moyer (Federal Highway Administration) .... 209

An Examination of the Efficacy of a Brief Educational Program on Driver Distraction
Arthur F. Kramer, Jason S. McCarley (University of Illinois), Scott P. Geisler (General Motors Corporation) ........................................................................................................................................................................ 211

Did You See That? A Study of Change Blindness
Tara Smyser, John D. Lee, Joshua Hoffman, Robert Betts (University of Iowa) ................................................................................................................. 217
A Comparison of Traffic Sign Comprehension Using Static, Dynamic and Interactive Presentation Media  Susan T. Chrysler, James Wright, Alicia Williams (Texas Transportation Institute) .......................................................... 219

The Effects of Lead-Vehicle Size on Driver Following Behavior: Is Ignorance Truly Bliss? James R. Sayer, Mary Lynn Mefford (University of Michigan Transportation Research Institute), Ritchie W. Huang (Honda R&D Americas, Inc.) ................................................................. 221

Stimulus-Response Compatibility Effects for Warning Signals and Steering Responses Dong-Yuan Debbie Wang, Robert W. Proctor (Purdue University), David F. Pick (Purdue University Calumet) ................................................................. 226

Drivers’ Perception of and Response to Brake Failure Hamish Jamson, Paul Smith (University of Leeds — UK) ................................................................. 231

Risk of Fatal Rear-End Collisions: Is There More to It Than Attention? John Sullivan, Michael J. Flannagan (University of Michigan Transportation Research Institute) ................................................................. 239

Driver Psychological Types and Car Following: Is there a Correlation? Results of a Pilot Study  Mark Brackstone (University of Southampton — UK) ................................................................. 245

The Relationship Between Collision History and a Computerized Assessment of Visual and Cognitive Skills in a Sample of School Bus Drivers Kenneth C. Mills (Profile Associates), Robert C. Hubal, Brent T. Ward (RTI International) ................................................................. 251

Societal Violence, Driver Age, and Attained Education: Independent Contributions to Road Accidents? Michael Sivak (University of Michigan Transportation Research Institute) .... 258

A Simulation Study of Path and Speed Through Double-Lane Roundabouts Gregory W. Davis (FHWA Office of Safety, RD & T), Vaughan W. Inman, Ted Shafer, Bryan J. Katz (SAIC Transportation Research Division) ................................................................. 259

Author Index ........................................................................................................................................... 265
