TRAFFIC AND TRANSPORTATION STUDIES

PROCEEDINGS OF THE FOURTH INTERNATIONAL CONFERENCE ON TRAFFIC AND TRANSPORTATION STUDIES

August 2-4, 2004
Swisshotel, Dalian, China

CO-SPONSORED BY
Institute of Transportation Engineers (ITE), United States
Japan Society of Civil Engineers (JSCE), Japan
China Association for Science and Technology (CAST), China
Systems Engineering Society of China (SESC), China
Beijing Jiaotong University (BJU), China
Hong Kong Society for Transportation Studies (HKSTS), China

SUPPORTED BY
National Natural Science Foundation of China (NSFC)

EDITED BY
Baohua Mao
Zongzhong Tian
Quanxin Sun

Science Press
Contents

Keynote Speeches

Optimisation of Railway Capacity Used by Stochastic Modelling ............... 1
   Ingo A. Hansen

Traffic at Urban Intersections: Stop-time-Travel-time-Relation
gained from Vehicle Probe Data ................................................................. 11
   Reinhart D. Kühne and Kai-Uwe Thiessenhusen

System and User Performance in Multi-Class Networks under
Multi-Criteria Route Guidance Systems ....................................................... 18
   Haijun Huang and Zhichun Li

Transportation Policy and Management

Taxicab, Specialized Mode or the Key to Integrated Transit? ..................... 28
   James M Cooper, Randall Claywell, Alison McCleery
   Michael Carreno and Stephen McKay

   Liquin Xu, Ying Li and Liwen Hou

Towards Successful Conditions for PFI in Toll Road Projects:
Indonesia Case ................................................................. 43
   Pradono, N.Ohmori and N.Harata

Road Tolls, Parking Fees, and Daily Morning-Evening Commutes ............ 53
   H. Michael Zhang and Xiaoning Zhang

Urban Structure and Trip Length of Journey-to-work Travel Based
on the Travel Performance Efficiency Index ............................................. 61
   Yuzo Masuya, Thoru Tamura, Kazuo Saito and John Black

New Models of Urban Transportation Planning Based on Transport
Efficiency ........................................................................ 71
   Huapu Lu and Yuanyuan Wang

“Travel” to Work by Nonmotorized Modes in the United States
and Israel ................................................................. 79
   Pnina O. Plaut
Modeling Urban Development and Travel Behavior for Assessment of Land Use, Transportation and Environmental Policies ..........................88
Hiroshi Sugita

Urban Design Principles for Vulnerable Pedestrian Groups .....................98
Michael Carreno, Steve Stradling, Tom Rye and Alexandra Willis

A Study on Pedestrian Mobility Indices Using RFID .............................107
Yasuhiro Nakajima, Kazuhiko Makimura, Yoshitaka Nishiyama, Tsutomu Yabe and Jun Oikawa

Research on Problems of Pedestrian Facilities in Dhaka City, Bangladesh ..........................................................118
Khan Rubayet Rahaman, Nobuaki Ohmori and Noboru Harata

Modeling Pedestrian's Decision at Street Crossing ...............................127
Habibollah Nassiri and Yousef Sajed Amooghin

Study on Improvement of Pedestrian Environments and Possibility of Pedestrian-Traffic Inducement ..............................138
Ki-Wook Song, Kenichi Teramachi, Chiaki Matsunaga, Qiang Li, Yoshinao Oeda and Tomonori Sumi

Understanding Time-Space Prism Constraints for Modeling Weekend Travel Behavior ..................................................147
Xin Ye and Ram M. Pendyala

Passengers’ Waiting Behavior at Bus Stops ........................................157
Nobuaki Ohmori, Takayuki Hirano, Noboru Harata and Katsutoshi Ohta

Analysis of Freeway Traffic Accidents in China ..............................165
Liyan Qin, Chunfu Shao and Ying Wang

Study of Traffic Safety Based on Traffic Mechanism ..........................173
Chong Liu, Huapu Lu and Ming Chen

Does Restricting Trucks Improve Freeway Traffic Operations? ............182
Renatus N. Mussa

A Proposal of Evaluating System for Road Improvement in Mid-Mountainous Areas ..................................................192
Ryosuke Ando

Peter Breuer
Study of the Transfer Factor in Urban Bus Transit Planning
   Evaluation ................................................................. 214
   Zhihong Zhao, Xuewu Chen and Wei Wang

Development of Methodology for Analyzing Travel Patterns in the
Context of Developing Countries ........................................ 222
   Junyi Zhang and Akimasa Fujiwara

The Impact of ETC Systems on the Safety Performance of Toll
Collection Plazas .......................................................... 235
   Jian Lu, Fan Ye, Jiping Ding and Qiaojun Xiang

Traffic Safety Analysis of Intersections with Signals in China ........ 242
   Yulong Pei and Jinsong Hu

A Decision Model of Work Arrival Time and Departure Time and
Its Application in Evaluation of TDM Measures ......................... 249
   Qiang Li, Takahiro Higuchi, Yoshinao Oeda,
   Guoquan Li and Tomonori Sumi

Development of Urban Land Use Model to Compare Transit-Oriented
and Automobile-Oriented Cities ........................................ 260
   Kazuhiro Nomura, Hirotaka Koike and Akinori Morimoto

E-Commerce’s Effect on Transportation and Collaborative Logistics ..... 269
   Hualong Yang and Bin Liu

Parking in Beijing: Development History, Current Polices and
Future Strategies .......................................................... 275
   Haiyan Wu and Ronghui Liu

Transportation Planning and Optimization

The Impact of Information Technology on Travel Demand ............ 286
   Francois J. Botes

Incorporating Impacts of Accessibility on Trip Generation Using
Logistic Analysis ........................................................... 296
   Shucheng Hu and Wafaa Saleh

Strategic Equilibrium Model of Carrier and Shipper for Container
Transportation Network: a Bi-level Competitive Approach ............ 308
   Zijian Guo and Xiangqun Song
Solution Algorithm for the Bilevel Linear Programming Formulation of the Network Design Problem ........................................... 317
Maoxian Zhao and Ziyou Gao

Travel Time Computation of Link and Path Flows and First-In-
First-Out ................................................................. 326
Y. E. Ge and Malachy Carey

Hybrid Genetic Algorithm for Solving a Class of Stochastic Location-
Routing Problem ......................................................... 336
Rui Song, Shiwei He, Qiang Zhao and Hang Zhao

Study of Estimation of Dynamic Network OD Flows ............... 345
Pengpeng Jiao, Huapu Li and Shanshan Yang

Empirical Analysis of Value of Time for Non-Work Activities .... 354
Hironori Kato and Kenichi Kouch

A Stochastic Threshold Model for Estimating the Value of Travel Time ................................................................. 363
Chuan-Zhong Li and Lars Hultkrantz

Practical Issues in Traffic Prediction for Certain Toll Roads .... 374
Jing Shi

Choice Probability Problems in Stochastic Assignment ............. 384
Lin Cheng, Jingyuan Wang, Yunhong Shao and Wei Wang

Locomotive Drivers' Diatheses in China's Railways ............... 392
Long Ye, Yujing Jiang, Wensheng Jiang and Mei Shen

Analysis of Conditions Required for a Modal Shift by Trucks to Ferry Lines Using a Route Choice Model ......................... 401
Masato Okayama and Michiyasu Odani

A Route Choice Model on Multimodal Transport Network ....... 411
Shaokuan Chen, Baohua Mao, Yong Ding and Peng Du

Model and Its Algorithms for the Optimization of Loading Bulky Goods on Railways ..................................................... 420
Dingyou Lei and Zhang Jin

Optimal Location of Traffic Count Sections .......................... 431
Ernesto Cipriani, Gaetano Fusco and Stefano Gori
The Impact of Departure Time Variability on Two-Link Personal Travel ......................................................................................................................... 442
Eli Ismutulla and Upali Vandebona

Determination of Stochastic Bottlenecks Capacity on Freeways and Estimation of Congestion Probabilities ........................................................................ 451
Ning Wu

Simulation Study on the Transition between Chaos and Order Motion in Traffic Flow ............................................................................................................. 461
Lijun Liu, Guoguang He and Dongshan Wang

A Combined Optimization Model for Multiple Transport-Mode Selection and Its Solution Algorithm ................................................................................... 468
Ruhe Xie and Dezhi Zhang

Reliability Analysis of Congestion Pricing Schemes under Demand Uncertainty ........................................................................................................ 476
Xiaoning Zhang

A Cellular Automata Model for Synchronized Flow and Wide Jams .......................................................... 485
Rui Jiang and Qingsong Wu

Valuing Environmental Aspects Using Optimal Stated Preference Experiments .............................................................................................................. 492
Alejandro M. Tudela and Maria Paola Garcia

An Estimate Model on the Scale of a Logistics Center Based on the Principle of Supply-and-Demand Equilibrium ......................................................... 502
Hongzhi Guan, Hongbo Chi and Yuhong Zhang

BRAS: Generic Solutions to Traffic Problems at Intra-Urban Networks ............................................................................................................................. 507
Yu-Sen Chen, Henk Van Zuylen, Sandor Verhoeven and Theo Muller

The Effects of Raising Railway Speeds on Vehicle Performance at Track Transitions .................................................................................................. 523
Xiaoyan Lei and Quanjin Wang

An ANTS Heuristics for User Equilibrium Assignment ......................................................................................... 533
Jinghui Wang and Lianyu Wei

Modeling the Impacts of ATIS on Joint Trip Destination, Modal Split, and Route Choice Behaviors ................................................................. 541
Zhichun Li and Haijun Huang
Loading and Storage Distribution of Dangerous Goods by Means of Artificial Intelligence ........................................550
Zhiya Chen and Dingyou Lei

A Bi-level Modal for Logistics Network Design Problem Based on SPE .................................................................555
Huijun Sun and Ziyou Gao

Applications of New Technologies

Investigation of Bunched Traffic on Urban Streets ..................................565
Xiaoping Guo, Michael C.Dunne, Xiaoguang Yang and Lin Yu

Parallel Traffic Network Simulation Based on Distributed Systems........576
Liying Wei and Chunlin Tian

The Effect of Vehicle Exhaust Emissions Regulations on the Export of Used Trucks and Auto Parts .......................584
Masaaki Fuse and Shigeru Kashima

Estimation of Traffic Status in Urban Road Networks Using Taxi-Based GPS and GIS ........................................594
Xiaohua Tong and Jianyang Chen

Line Source Models to Estimate Urban Air Concentration in Different Wind Conditions ........................................602
P. Goyal and Rashmi Mittal

Study of Wheel Chair User Perception Level of Road Roughness........614
Yoshinao Oeda

The Study of Traffic Delay Based on Cellular Automation Model of Traffic Flow ..................................................625
Runping Zhai, Fengchun Han, Yingli Zheng and Sheqiang Ma

The Value of Noise Reduction Based on the Contingent Valuation Method and the Hedonic Pricing Method ........632
Thomas Bue Bjørner

Economic Analysis in a Container Terminal Simulation Study ........642
Niels Lang and Albert W.Meenstra

Train Movement Simulation System for Saving Energy .....................654
Clearance Interval for Vehicles Making Left Turn..................................................772
J. C. Pernía and J. J. Lu

Potential Demand Analysis for Bicycle Commuting in Japan: A Case Study for Takasaki Metropolitan Areas ..................................................782
Shengchuan Zhao

Signalised Intersection Capacity Reduction of Trucks ............................................ 793
Euan Ramsay, Jonathan Bunker and Rod Troutbeck

A Behavioural Driver Model for Driving on Roundabouts ......................................803
Francesco Saverio Capaldo

Effect of Transportation Facility Improvement on Residential Location Behavior .................................................................811
Akinori Morimoto, Hirotaka Koike and Kazunari Takagi

A Study on Forewarning System of Traffic Safety on Expressway .........................819
Wenlong Jiang, Feng Lu and Yulu Miao

Fuzzy Logic-Based Map Matching in Intelligent Traffic Navigation......................826
Songchun Wu, Xiaohua Tong, Dajie Liu and Dongyuan Yang

Tableland Railway Communication and Control System .......................................834
Huashen Wang and Jianchen Mu

Indexes

Subject Index.............................................................................................................840
Author Index...........................................................................................................845
