NEUTRON RADIOGRAPHY (7)

Proceedings of the Seventh World Conference
Rome, Italy
September 15-21, 2002

Edited by

Piero Chirco
Softec S.a.s
Bologna, Italy

Roberto Rosa
ENEA

ENEA
Italian National Agency for New Technologies,
Energy and the Environment
CONTENTS

Session A
FACILITIES

Energy-selective neutron radiography and tomography with cold neutrons .................. 3
Design and simulation of neutron optical devices plus flight tube for neutron radiography ................................................................. 11
Extended study for effective energy measurements of thermal and sub-thermal neutron beams (discussions for filter effects) ................................................................. 21
Development of a new radiography facility with extended applications at the INR TRIGA reactor ................................................................. 33
Engineering solutions for the new radiography and tomography facility at FRM-II .... 41
Shielding aspects for the neutron tomography facility at FRM-II ................................. 49
The new station for fast radiography and tomography at the ILL in Grenoble .......... 65
Examples for the solution of technical problems and for material inspection by different methods of neutron radiography ................................. 77
Neutron beam design for low intensity neutron and gamma-ray radioscopy using small neutron sources ................................................................. 89
Facilities for neutron radiography in Africa: description, performance and applications ................................................................. 95
Neutron radiography at Curtin University of Technology, Australia ....................... 109
Present status and applications of neutron radiography at the Algerian Es-Salam Research Reactor ................................................................. 117
Bi filters and the changing of their monocrystal characteristic under irradiation .... 127
Applications of digital neutron imaging at BARC (India) using reactor and non reactor sources ................................................................. 135
Characteristics and evaluation for HANARO neutron radiography facility ............... 149
Performance studies of a mobile neutron source based on the SbBe reaction .......... 159

Session B
DETECTION METHODS

Fast neutron resonance radiography for elemental imaging: theory and applications . 169
Some experimental studies on time-of-flight neutron radiography at pulsed neutron sources ................................................................. 173
### Session C
**DETECTOR PROPERTIES**

- Neutron imaging using an optical stimulated luminescent material: $\alpha$-$\text{Al}_2\text{O}_3$:C$+\text{Gd}_2\text{O}_3$ ................................................................. 195
- Development of storage phosphors and image plates for neutron imaging ................................................................. 205
- Detection quantum efficiency and spatial resolution of neutron CCD detectors ......................................................... 207
- A study of microscopic sensitivity performance of imaging plate .................................................................................. 215
- Investigation of the properties of amorphous silicon flat panel detectors suitable for real-time neutron imaging .................................................................................................................. 223

### Session D
**NEUTRON SCATTERING METHODS**

- Preliminary study for an imaging technique using scattered radiations ................................................................. 233
- Intergranular strains in transforming NiTi alloys ........................................................................................................ 245
- In situ neutron diffraction studies of deformation mechanism of metals and alloys under uniaxial loading ........................................................................................................................................ 253
- First phase-contrast tomography with thermal neutrons .......................................................................................... 263
- Neutron tomography using small angle scattering data .......................................................................................... 279
- Phase contrast radiography using thermal neutrons .............................................................................................. 285
- Plastic strain estimation from neutron Bragg peaks .............................................................................................. 293
- Residual strain investigations by neutron diffraction method in single-crystal and polycrystalline materials ........................................................................................................................................ 303

### Session E
**NEUTRON TOMOGRAPHY**

- Proposed neutron tomography facility in South Africa ........................................................................................... 313
- Computed tomography with thermal neutron and gaseous position sensitive detector ......................................................... 327
- Advanced tomography algorithms ........................................................................................................................... 337
- Neutron tomographic investigations of strong absorbing materials ........................................................................... 347
- Application of discrete tomography in neutron imaging .......................................................................................... 361
- Advanced filtered backprojection algorithms ......................................................................................................... 373

### Session F
**FAST NEUTRON RADIOGRAPHY**

- Fast neutron resonance radiography in a pulsed neutron beam .................................................................................... 383
- Source design for high-energy neutron imaging ........................................................................................................ 399
- The NECTAR facility at FRM-II: status of the set-up of the radiography and tomography facility using fast neutrons ........................................................................................................................................ 401
- Neutron radiography with 14 MeV neutrons from a neutron generator ........................................................................ 411
- Development of high-energy neutron imaging techniques at LLNL ........................................................................... 419

### Session G
**REAL TIME NEUTRON IMAGING**

- Neutron radioscopy: history and “future”? .................................................................................................................. 423
- Flow visualization of segregation process in a fluidized-bed by neutron radiography ................................................ 431
- Dynamic neutron radiography of a combustion engine ............................................................................................ 439
- The “perfect” neutron radiosity system ..................................................................................................................... 447
- Towards the visualization of fuel cavitation in a nozzle of a diesel engine by neutron radiography ................................... 453
- Calibration of neutron imagery for petroleum engineering applications ........................................................................ 459
- Applications for real time neutron radiography for convection driven flow pattern transition studies ......................... 469

### Session H
**QUANTIFICATION OF NEUTRON RADIOGRAPHY DATA**

- Measurement uncertainty of gas-liquid two-phase flow by neutron radiography ......................................................... 479
- Visualization and void fraction measurement of gas-liquid two-phase flow in a commercial plate heat exchanger by thermal neutron radiography ......................................................................................... 487
Radiography investigation and Monte Carlo simulation of neutron transmission of boron-alloyed steel .......................................................... 497
Quantitative investigation of the moisture distribution and movement in layers of aramide textiles used for ballistic body armor panels .............................. 511
Corrections for scattered neutrons in quantitative neutron radiography ......................................................... 521
Analyzing of segregation in mixtures of 3-methylpyridine and heavy water by dynamic neutron radiography (II) ...................................................... 529

Session I
INTEGRATION WITH OTHER NDT METHODS

Comparison of X-ray and neutron tomography investigations of geological materials .............................. 543
Current status of neutron radiography in Pakistan ......................................................................................... 551
Comparison of neutron radiography with other non-destructive methods ................................................. 561
Comparison of neutron radiography with other non-destructive techniques for the inspection of CF188 flight control surfaces ........................................... 569

Session I
APPLICATIONS

Non-destructive neutron radiography and tomography inspection of the future nuclear fusion blanket material (SiC/SiC) ......................................................... 579
The NEUTRA and NCR radiography stations at SINQ as user facilities for science and industry .......... 593
Applications of neutron radiography in archaeology ..................................................................................... 603
Helicopter rotor blade study by neutron-X-ray radiography and vibration diagnostics ....................... 613
The potential of neutrons for the study of wood properties ........................................................................... 621
Thermal neutron radiography based standard method for moisture analysis status .......................... 631
Composition of radiography pictures of whole helicopter rotor blades in Hungary ............................... 637
Determination of the capillarity coefficients of distilled water and oil in concrete by neutron radiography ............................................................................ 643
Neutron radiography studies of water migration in construction concrete and steel materials ....... 652
H/V filter measuring a ballooning gap size of irradiated fuels by the indirect method of neutron radiography .................................................................................. 663
Reliability enhancement of pyro devices using imaging plates (IP) in neutron radiography .................. 673

Color radiography ........................................................................................................................................... 679
Velocity field measurement in gas-liquid metal two-phase flow with use of PTV and neutron radiography techniques .............................................................................. 687
Determination of water variation in cut flowers with evaluated neutron cross-section of water for cold neutron radiography ..................................................... 699
Investigation of water loss through chrysanthemum leaves with the process of vacuum cooling using cold neutron radiography ...................................................... 707

POSTER SESSION

Neutron radiography and nuclear weapons inspection .................................................................................. 717
A study on boron distributions in 12" boron doped Cz-Si wafers by neutron induced autoradiography .......... 719
Application of neutron imaging plate and neutron CT methods on nuclear fuels and materials .............. 727
Neutron and photon experimental characterisation for an improved neutron radiography facility at ENEA Casaccia TRIGA reactor – Preliminary results ...................... 737
Characterization of neutron radiographic image using Dy-containing imaging plates .......................... 745
Comparison of two CCD detection systems for neutron radiography at different beam conditions .... 747
Conceptual consideration on spectroscopic analysis of radiographic image by pulse spallation neutron source ............................................................................... 751
Detectors for element sensitive fast neutron radiography ......................................................................... 753
Development of frame integral data acquisition technique for the neutron computed tomography using neutron imaging scope .................................................................. 755
Development of quantitative technique of digital neutron radiography using cooled -CCD-camera ........ 763
Evaluation of hydrogen concentration in zirconium hydride and deuteride using neutron radiography .... 765
Feasibility study of element sensitive radiography at a short-pulse neutron beam facility ..................... 775
Full Monte Carlo simulations of high-energy neutron radiographic images ............................................ 777
HANARO neutron radiography facility for KOLAS of ISO 17025 and design phase of tomography .......... 779
Image processing methods to obtain cross-sectional void fraction distribution of gas-liquid two-phase flow from a projection image by neutron radiography .......... 789
Influences of scattered neutrons and gamma rays on neutron radiography using an imaging plate for neutron detection ........................................................................ 799
