T. E. Simos, G. Psihoyios, Ch. Tsitouras (Eds.)

ICNAAM 2005
International Conference on Numerical Analysis and Applied Mathematics 2005

Official Conference of the European Society of Computational Methods in Sciences and Engineering (ESCMSE)
Table of Contents

Preface 1-2
Conference Details 3-4
European Society of Computational Methods in Sciences and Engineering (ESCMSE) 5-6

INVITED SPEAKERS

George A. Anastassiou 7-10
Basic Convergence with Rates of Smooth Picard Singular Integral Operators

J. R. Cash 11

Ronald Cools and Dirk Nuyens 12-15
Structured matrices as a blueprint for integration lattices

Roland W. Freund 16-19
Krylov Subspace-Based Reduced-Order Modeling of Large-Scale Systems of Integro-DAEs

K. Gürlebeck 20-24
Characterization of monogenic Dirichlet spaces

Felice Iavernaro, Francesca Mazzia and Donato Trigiante 25-28
Stability and conditioning in Numerical Analysis

Angela Kunoth 29-30
Adaptive Methods for Stationary Variational Problems from a Wavelet Perspective

G. Vanden Berghe and M. Van Daele 31-34
Exponentially-Fitted Geometric Numerical Integration

NORMAL CONTRIBUTIONS

Manuel Abellanas, Antonio Bajuelos, Gregorio Hernández and Inês Matos 35-38
Good Illumination with Limited Visibility

Z. Akdoğan, M. Demirci and O. Sh. Mukhtarov 39-43
Green Function of Discontinuous Boundary Value Problem with Transmissions Conditions

M. U. Akhmet, G. A. Bkmukhambetova and Y. Serinağaoglu 44-46
Regular and Irregular Discontinuous Dynamics of the Systemic Arterial Pressure

Salem Al-Assadi 47-49
Numerical Computation Method For Disturbance Rejection In Linear Time-Invariant Multivariable Systems

Slireza Amirteimoori 50-53
Prioritization Method for Frontier DMUs: A Distance-Based Approach

Osacar Angulo and Juan Carlos López-Marcos 54-57
Numerical Schemes for a Size-Structured Cell Population Model

© 2005 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
B. Asady and M. Tavassoli Kajani
Dual Fuzzy Linear Systems

M. A. Bokhari
Hermite interpolating L2-Approximants: Computational Aspects

A. S. Bonfoh
Error Analysis of a Cahn-Hilliard System with Elasticity

M. H. Bordbar, V. Tanskanen and P. Zamankhan
Structural Ordering in a Bounded Dense Shear Flow of Viscoelastic Spherical Particles

Dorota Bors, Marian Jakśto and Stanislaw Walczak
On Approximate Solution of Equations With Nonsingular Roots

Mikhail Borsuk
Sharp Estimates of Solutions to the Robin Boundary Value Problem for Elliptic non Divergence Second Order Equations in a Neighborhood of the Conical Point

A. Bourchtein
Semi-Lagrangian Scale Selective Finite-Difference Scheme

W. Bożejko and M. Wodecki
Parallel Evolution Heuristic Approach for the Traveling Salesman Problem

Abdallah Bradji
Improved Convergence Order of Finite Volume Solutions And Applications in Finite Elements Methods

A. P. Brasil, J. H. Carneiro de Araujo and V. Ruas
Piecewise Linear Finite Element Approximation of a Generalized Stokes System Related to Viscoelastic Flow

A. G. Bratsos, I. Th. Famelis and K. A. Belibassakis
An Implicit Numerical Method for a Shallow Water Equation in 2+1 Dimensions

Edoardo Bucchignani
An Inexact Newton-Krylov for an Implicit Euler Flow Solver

J. Caballero, B. López, J. Rocha and K. Sadarangani
A General Integral Equation under the Banach, Schauder and Darbo’s Fixed Point Theorems

D. K. Callebaut and G. K. Karugila
Two-Dimensional Generalization of The Euler-Mascheroni Constant

Carmen Calvo-Jurado, Juan Casado-Díaz and Manuel Laynez
Asymptotic Behavior of Linear Dirichlet Problems with Varying Boundary Conditions

Jose E. Castillo and Mark Yasuda
On the Solvability of the Castillo-Grone Minetic Discretization

E. W. V. Chaves
Bifurcation Analysis in Constitutive Laws

Chin-Yun Chen
Triply-Adaptive Numerical Quadrature

D. Constales, R. de Almeida and R. S. Kraußhar
Asymptotic Growth Analysis of Some PDE Related to Higher Dimensional Dirac Type Equations II

Jonathan J. Crofts and Ruslan L. Davidchack
Efficient Detection of Periodic Orbits in High Dimensional Systems

L. J. Cvetković, V. Kostić and D. Šolak
How to Improve Upper Bound for the Perron Root

© 2005 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
Roy Danchick and Mario L. Juncosa
Maximum Polynomial Degree Nordsieck-Gear \((k, p)\) Methods: Existence, Stability, Consistency, Error Estimation, Refinement, Convergence and Computational Examples

Fasma Diele, Carmela Marangi and Stefania Ragni
Numerical Solution of Infinite-Horizon Optimal Control Problems Based on Quadrature and Runge-Kutta Methods

Paweł Dłużewski
Mathematical Foundations of Anisotropic Hyperelastic Finite Elements Based on Nonlinear Strain-Stress Response

Roman Dmytryshyn
The Two-Dimensional g-Fraction with Nonequivalent Variables for Double Power Series

Q. Dong, A. Tezuka, K. Himeno and K. Matsui
Identification of Material Properties for Pavement Structures in Time Domain

M. K. El-Daou and A. Al-Kandari
Error Enclosure for Coefficients Perturbation Methods Applied to Boundary Value Problems

F. Faghihi
Numerical Solutions of Coupled Differential Equations and Initial Values Using Softwares; An Applied Program

I. Th. Famelis and A. G. Bratsos
On the Solution of the Cubic Nonlinear Schrödinger Equation

M. Farhloul and A. Zine
A posteriori Error Estimates for a Mixed Finite Element Approximation of Non-Newtonian Fluid Flow Problems

Reza Farzipoor Saen
Harmonizing Scores Growth among multiple Criteria of Excellence Model of EFQM by Goal Programming Technique

J. Felcman and K. Findejs
Higher-Order Finite Volume Method for Multidimensional Compressible Flow

Massimiliano Ferronato, Annamaria Mazzia, Giorgio Pini and Giuseppe Gambolati
Meshless Local Petrov-Galerkin Method and standard unstructured Finite Elements for the solution of 2-D elastic problems

Uwe Fladrich, Holger Brunst and Jörg Stiller
Analyzing the Memory Access Pattern of a Spectral Element Method Implementation

Francisco Ortegón Gallego
The Hydrostatic Approximation with an Arbitrary Seabottom

Fattehallah Ghadi, V. Ruas and Mohamed Wakrim
Finite Element Solution of a Generalized Stokes System in Stream Function-Vorticity Formulation

Ioan Golet
On Probabilistic 2-Normed Spaces. Applications to Random Signals

G. González and J. Aguilar
Genetic Programming and Randomized Algorithms for Estimation of Singulars Values of Large Matrices

María Teresa González Montesinos and Francisco Ortegón Gallego
An Existence Result for a Nonlinear Parabolic–Elliptic Problem

K. G. Hadjifotinou and M. Gousidou-Koutita
The Recurrent Power Series method as Integrator of Resonant Satellite Systems
A. Hannukainen and S. Korotov
On Two-Sided a Posteriori Estimates of Computational Errors for Linear Elliptic Type Boundary Value Problems
222-225

Vjeran Hari
Butterfly Matrices and the Modulus Kogbetliantz Method
226-229

Vjeran Hari, Sanja Singer and Saša Singer
Efficient Eigenvalue Computation by Block Modification of the Indefinite One-Sided Jacobi Algorithm
230-233

S. M. Hashemiparast, M. Masjed-Jamei and M. R. Eslahchi
Numerical Solution of Linear Integral Equations Using Modified Gauss-Legendre Quadrature Rules
234-239

M. M. Heydari and B. Farhanich
Bed depth Estimation in Rotary Kiln by Inverse Problem
240-243

I. Hoteit, G. Korres and G. Triantafyllou
Joint State-Parameter Estimation in Highly Dimensional Systems
244-248

I. Hoteit, G. Triantafyllou and G. Korres
Treating the Model Error in a Low-Rank Ensemble Kalman Filter
249-253

Felice Iavernaro and Donato Trigiante
On Some Conservation Properties of the Trapezoidal Method Applied to Hamiltonian Systems
254-257

L. Iliadis, F. Maris, S. Spartalis and T. Tsataltzinos
An Innovative Fuzzy Additive Algebraic Model Incorporated by a DSS for Risk Estimation (The Case of Evros Torrential Risk)
258-263

Timur Ismagilov
On Calculation of Surface Elements and Volumes
264-267

Timur Ismagilov
On Calculation of Gradients
268-271

G. A. F. Ismail, I. H. Ibrahim and F. M. Yousry
Stability Analysis of Special Class for Solving Delay Differential Equations
272-273

G. A. F. Ismail, I. H. Ibrahim and F. M. Yousry
Special Implicit-Explicit Class for Solving ODEs and DDEs
274-276

G. A. F. Ismail and A. S. Elfeshawey
A Class Of Three Implicit P-C Block For Solving Stiff Systems
277-279

Tadeusz Jankowski
Relaxation Methods for First Order Differential Equations
280-283

Christopher G. Jesudason
Equilibrium properties of a hysteresis dimer molecule from MD simulations using two-body potentials
284-286

A. Jiménez-Casas and M. Castro
Slow Motion for a Phase-Field Model
291-294

Z. Kalogiratou, Th. Monovasilis and T. E. Simos
Symplectic and Exponentially fitted Symplectic Methods of Second and Third Order
295-297

D. K. Callebaut and A. H. Khater
Stability of Universe Using Poisson Equation With Bilinear Cosmological Term
298-302

Sanjay Kumar Khattri
Alternative to the Laplacian Smoothing
303-308

© 2005 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
Sanjay Kumar Khattri
Hexahedral Mesh by Area Functional
Sanjay Kumar Khattri and Gunnar Fladmark
Functional Grid Generation and Adaptation
Valeri Kontorovich
A Statistical Analysis Applied to Strange Attractors
Kuniyoshi Abe and Shao-Liang Zhang
A Numerical Study for Effects of Inner Solvers in Variable Preconditioned GCR Method
S. M. Lacey, E. S. Benilov and S. B. G. O’Brien
Explosive Instabilities for a Three-Dimensional Liquid Film Inside a Horizontal Rotating Cylinder
R. Laister, A. T. Peplow and R. E. Beardmore
Travelling Waves in Continuum Models of Nonlinear Lattices: a DAE approach
R. Lassoued, M. Guenfoud
An Accurate Computational Procedure for Calculating Natural Frequencies of Beams and Plates
K. H. Leem and G. Pelekanos
Algebraic Multigrid Preconditioner for Solving Integral Equations in Electromagnetics
Abdelhakim Lotfi
Optimal Die Design in Extrusion Process
Yoram Louzoun, Nadav M. Shnerb and Sorin Solomon
Microscopic Noise and Survival in Hostile Environments
Jean M-S Lubuma and Kailash C Patidar
Non-standard Finite Difference Method for Singularly Perturbed Advection Reaction Equation
Jan Maes and Adhemar Bultheel
Easy Construction of Non-Uniform Biorthogonal SplineWavelets with Compact Support
Ana Mafalda Martins and Antonio Bajuelos
Some Properties of FAT and THIN grid n-ogons
Ch. Mamaloukas and S. Spartalis
An Exact Solution of a Viscous Incompressible Electrically Conducting Fluid Over an Elastic-Stretching Sheet
Z. Manussaridis, Ch. Mamaloukas and S. Spartalis
A VRS Dimension FRAMEWORK for Effective DSS Design
J. A. Manzano Lizcano and C. Sánchez Ávila
A Microcalcification Detection System for Digital Mammography using the Contourlet Transform and SVM
Th. Monovasilis, Z. Kalogiratou and T. E. Simos
Symplectic and Exponentially fitted Symplectic Methods for the Numerical Integration of Orbital Problems
N. Moráča and Lj. Cvetković
Algorithm for Checking S-SDD Matrices
R. Naidoo, S. Baboolal
Numerical Integration of the Plasma Fluid Equations with a Modification of the Third Order SD3 Kurganov-Levy Scheme
S. Nakamori, R. Caballero, A. Hermoso, J. Jiménez and J. Linares
Polynomial Estimation of Signals from Non-Independent Uncertain Observations using Covariance Information
S. Nakamori, A. Hermoso-Carazo and J. Linares-Pérez

Smoothing Problems for Signal Estimation with Correlated Signal and Noise using Randomly Delayed Observations

S. Nakamori, R. Caballero, A. Hermoso, J. Jiménez and J. Linares

Recursive Filtering Algorithm Based on Covariances for Uncertainly Observed Signals Correlated with the Observation Noise

A. Nappi

A Kalman Filter Approach to Assess Damage in Concrete Dams

N. Mahdavi-Amiri and S. H. Nasseri

A New Method for Solving Fuzzy Variable Linear Programming Problems

Arash Navidi

Modification of Aitken's Δ2 Formula that Results in a Powerful Convergence Accelerator

Y. Y. Nie and Z. J. Yang

Error Analysis of a Numerical Determination for Matrix Stability

F. I. Dehayem Nodem, J. P. Kenne and A. Gharbi

Capacity Expansion, Production and Maintenance Planning in Stochastic Manufacturing Systems

Hidenori Ogata

Fundamental Solution Method for Periodic Plane Elasticity

R. Pascual, G. Barrientos and V. Meruane

Transient Response Analysis of Large Cable-Reinforced Conveyor Belts

G. Petihakis and G. Triantafyllou

Analysis of Fishing Effort Scenarios on Marine Pelagic Dynamics: Preliminary Results

P. Pivonka, D. Smith and B. Gardiner

Upscaling of the Poisson-Nernst-Planck Equations Using the Volume Averaging Method

JSC Prentice

Incorporation of the First Derivative of the Objective Function into the Linear Training of a Radial Basis Function Neural Network for Approximation via Strict Interpolation

Stefania Ragni, Moody T. Chu, Fasma Diele and Carmela Marangi

Estimating the Consumption Matrix in the Leontief Model

I. Relke

Special Type of Stereo-Image Processing in 3D Displays

F. Reverter, M. Calvo and J. M. Oller

Numerical computation of the Rao distance between Multivariate Normal distributions

Matthias Rupp, Wolfgang Mergenthaler, Bernhard Mauersberg and Jens Feller

Markov Mills, Reliable Rolls and Monte-Carlo Mines: Minimizing the Operating Costs of Grinding Mills

Grzegorz Rządkowski, Anna Waśko and Sławomir Łepkowski

On a Generalization of the Trapezoid Method

Hassan Safouhi and Ahmed Bouferguene

Analytical and Numerical Treatment of Spherical Bessel Integrals and Application

D. P. Sakas and T. E. Simos

A P-stable Six-Step Exponentially-Fitted Method for the Numerical Solution of the Schrödinger Equation and Related Problems

Felix C. G. Santos, José M. A. Barbosa and Eduardo R. de Brito Jr

Simulation of the Damage Evolution Problem in Elasticviscoplastic Bars Employing the Generic Interface Graph (GIG)

Parviz Sargolzaei

Some Splitting for A Square Matrix A and Convergence Iterative Methods

© 2005 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
Sandy Sefi and Fredrik Bergholm
Modeling and Extrapolating High-frequency Electromagnetic Currents on Conducting Obstacles

Sasa Singer
A Numerical Model of Cooling in Gas–Quenching Systems

A. K. Singh, M. Herty and A. Klar
Applied Optimization of Vehicular Traffic Flow Using Smoothing and Penalization

S. A. Stevens, W. D. Lakin and P. L. Penar
Modeling Steady-State Intracranial Pressures in Microgravity

G. K. Stylios, F. Han and T. Y. Wan
Reconstruction and Virtual Cloning of a Human Head

Hirotaka Tadano and Tetsuya Sakurai
A Stabilization of the CGS Method by Avoiding Near-Breakdown

M. Tadjouddine, S. A. Forth and N. Qin
Automatic Differentiation of a Time-Dependent CFD Solver for Optimisation of a Synthetic Jet

Arpad Takači and Djurdjica Takači
On the Approximate Solution of Mathematical Model of a Viscoelastic Bar

Djurdjica Takači
On the Equation of Oscillation of Viscoelastic Bar

Jieqing Tan and Benyue Su
A Class of Generalized Trigonometric Polynomial Curves with a Shape Parameter

M. Tavassoli Kajani and B. ASADY
Numerical solution of system of linear integro-differential equations by using Legendre wavelets

Romeo Tirani
On The Minimization of the Defect in Continuous Runge-Kutta Methods

Giovanni Tosi and Simon S. Wang
Limit Cycles in Liénard Equations

R. Touihri, A. Soulaimani and F. Plunian
A Stabilized Finite Element Formulation Applied to the Kinematic Ponomarenko Dynamo Problem in Cylindrical Geometry

M. Hossein Alizadeh
On the Covariance of Generalized Inverses

J. C. Trillo, S. Amat and S. Busquier
Stable Biorthogonal Multiresolution in 3D

Roman Trobec, Marjan Šterk, Said AlMawed and Matjaž Veselko
Computer Simulation of Human Knee Cooling

Ch. Tsitouras, Ch. G. Massouros and M. Lambiris
A Mathematica Package Enumerating Hypergroups of Order 3

H. Van de Vyver
Exponential fitting and P-stability

V. Antony Vijesh and P. V. Subrahmaniam
A Note on a Quasi-Newton Method

D. S. Vlachos
Monte-Carlo Calculation of NaI spatial activity

D. S. Vlachos and T. E. Simos
Equivalent Circuit Approach to Interdigital Dielectrometry
D. S. Vlachos and T. E. Simos 580-583
Stability Improvement of Linear Multistep Methods

K. F. Wang, W. Li 584-587
Wavelet Neural Network and its Application to the Textile Spinning

Xing Tao Wang 588-592
Numerical Approach for Optimal Control of Time Delay Systems via Hybrid Functions

Y. Wu and A. Kumar 593-596
Interval Subdivision Strategies for Constrained Optimization

Zhihui Yang and Guiyuan Yang 597-600
Global Existence and Exponential Stability of Periodic Solutions for Recurrent Neural Networks with Functional Delays

Zhihui Yang 601-605
Periodic Solutions of Neutral Differential Models with State-Dependent Delay and Feedback Control

Y. C. Zeng, H. F. Guo and C. W. Yu 606-609
Fibre/Air Two-Phase Flow Model: Lagrangian and Eulerian Approaches

Organized by Mira Bozzi 611
Reifiable Functions and Approximation

P. Ciarlini and M. L. Lo Cascio 612-614
Stationary Wavelet Decomposition in Image Restoration: Some Experimental Results

Paolo Costantini 615-618
Generalized Tension Properties on Triangular Domains

Massimo Fornasier and Laura Gori 619-623
On Elementary Sampling Theorems on Bounded Domains

L. Gori, E. Pellegrino and E. Santi 624-627
On Certain Integral Reifiable Operators

Lopez Jaquez Francisco Javier and Noriega Morales Salvador 628-630
Generating 3D Digital Objects from 2D Bitmap Files

P. Lamberti 631-634
Cubature Formulas Based on Bivariate Quadratic Spline Quasi-Interpolants

Milvia Rossini 635-638
Detecting Discontinuities in Two-Dimensional Sampled Signals by Polyharmonic Pre-Wavelets

Professor J. R. Cash 639-640
Numerical Methods for the Solution of Two-Point Boundary Value Problems

Professor J. R. Cash 641
On the Construction of Smooth Interpolants for High Order Boundary Value Problem Solvers

J. R. Cash and D. R. Moore 642-645
MIRK Formulae for 2nd Order Two-Point Boundary Value Problems

J. R. Cash and D. R. Moore 646-649
MIRK Formulae for 2nd Order Two-Point Boundary Value Problems

Francesca Mazzia, Alessandra Sestini and Donato Trigiante 650-653
Smooth Spline Collocation for BVPs

Jeff R. Cash, Francesca Mazzia and Donato Trigiante 654-657
Hybrid Mesh Selection Algorithms, Based on Conditioning, for Two-Point Boundary Value Codes

© 2005 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
ICNAAM - 2005 Extended Abstracts

Pierluigi Amodio, Ian Gladwell and Giuseppe Romanazzi
On the Solution of General Bordered ABD Linear Systems

Annie Cuy and Brigitte Verdonk
Mini-Symposium On the Computation of Special Functions

Franky Backeljauw, Stefan Becuve and Annie Cuy
Continued Fractions for Special Functions in Maple

Joris Van Deun and Ronald Cools
Integrating products of Bessel functions using the incomplete Gamma function

Alfredo Deano and Javier Segura
On the Stability of Recurrence Relations for Hypergeometric Functions

Ana F. Loureiro, P. Maroni and Z. da Rocha
A Differential Equation of Even Order Fulfilled by the Classical Polynomials

Amargo Gil, Javier Segura and Nico M. Temme
Computing the Real Parabolic Cylinder Functions

Dirk Laurie
On the Evaluation of the Gamma Function

Annie Cuyt, Vigdis Petersen, Brigitte Verdonk and Haakon Waadeland
How Much Can a Continued Fraction Tail Estimate Influence its Evaluation?

O. Salazar Celis, A. Cuyt, R. B. Lenin and B. Verdonk
Univariate Rational Interpolation in Practical Applications

Amargo Gil and Javier Segura
On Numerical Algorithms for Real Functions of Confluent Hypergeometric Type

Nico M. Temme
Numerical Aspects of Special Functions

Annie Cuyt, Vigdis Petersen, Brigitte Verdonk and Haakon Waadeland
On the Impact of a Continued Fraction Tail Estimate on its Truncation Error Bounds

J. A. C. Weideman
Computing Special Functions via Inverse Laplace Transforms

Metin Demiralp
Computational Methodology for Optimal Control and Multivariate Problems

N. Abdülbaki Baykara and Metin Demiralp
Two Matrix Factor Approximant Optimization Via A Flexibility Function To pFp Type Generalized Hypergeometric Functions

Metin Demiralp
A Fluctuation Expansion Method for the Evaluation of a Function's Expectation Value

Hüseyin Kaya and Metin Demiralp
A New Order Reduction Method for Particle Simulations

Tülin Kaman and Metin Demiralp
Factorization of Evolution Matrix As an Approximation Scheme in the Solution of Optimal Control Problem for One Dimensional Harmonic Oscillator Via Time-Variant Weight Functions

M. Engin Kanal, Sevda Üsküplü and Metin Demiralp
Precision Increased Truncated Derivative Formulae in Terms of Forward and Backward Difference Operators

Ayşegül Kursunlu and Metin Demiralp
Weight Optimization in Segmented High Dimensional Model Representation For the Partitioning of Uniform Data

© 2005 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
Esma Meral and Metin Demiralp
An Optimized Two Factor Perturbation Based Exponential Matrix Factorization Approach to the Control Equations of Quantum Multiharmonic Oscillator With Linear Dipole Function and Linear Control Agents

Gülşen Taşkin and Metin Demiralp
Random Data Partitioning via Generalized High Dimensional Model Representation for Digital Elevation Models by Using Cubic Spline Interpolation

Sevda Üsküplü, M. Engin Kanal and Metin Demiralp
Extension of a Finite Regular Data Given To Determine A Univariate Function By Using Forward and Backward Differences

İrem Yaman and Metin Demiralp
Function Value Determination Via Asymmetric Interpolation From A Finite Regular Data Set

Organized by K. Prabhakaran Nair
Session: Application of Numerical Methods in Solving Engineering Problems

Sibi Chacko and K Prabhakaran Nair
Dynamic Analysis of Compliant Robotic Manipulator Using Finite Element Method

E. Abhilash, Prasad Krishna and M. A. Joseph
Modelling and Simulation of Solidification Microstructures in Permanent Mould Casting of Al-12%Si Alloys

N. Balasubramaniam, V. Soundararajan and K. Prabhakaran Nair
Design Optimization of Radial Active Magnetic Bearing Using Artificial Neural Network

K. Prabhakaran Nair
Static Analysis of Elastohydrodynamic Three Lobe Journal Bearing with Micropolar Lubricant Using Finite Element Method

K. K. Saju and Sibi Chacko
Three Dimensional Analysis of Solidification Process Using FEM

M. Udayakumar, R. Murugan and K. S. Umasankar
Numerical Simulation of Turbulent Pre-mixed Combustion in SI Engine

Vinay Kumar Dasari and P. K. Rajendrakumar
Stress Analysis of Layered Elastic Solids Using Finite Element Method

Susan Abraham, K. V. Narayanan and Abraham George
Automatic Mesh Generator for Arch Dams Using Three Dimensional Mapping Technique

Organizers: Dr. A. Albrecht, Assist. Prof. Ch. Makris, Dr. K. Steinhöfel and Prof. A. Tsakalidis
Minisymposium Title: “Computational Biology: Algorithms and Models”

Chris Christiansen, Thomas Mailund, Christian N. S. Pedersen and Martin Randers
Quartet Distance Between General Trees

G. Lappas
Generating Classification Circuits for Approximating Biological Decision Problems

Michal Voráček and Bořivoj Melichar
Searching for Regularities in Generalized Strings using Finite Automata

Yannis Panagis and Evangelos Theodoridis
Linear-Time Period Computation of a String with Suf_x Trees

Ch. Makris, K. Perdikuri, E. Theodoridis and A. Tsakalidis
Identification of Protein Patterns in Nucleic Acid Sequences

Fatima S. Arikat, Aris N. Bakalis, Manolis Christodoulakis, Costas S. Iliopoulos and Laurent Mouchard
Experimental Results in Pattern Matching on Weighted Sequences

© 2005 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
Yoan José Pinzón Ardila and Shu Wang
Simple Algorithm for Pattern-Matching with Bounded Gaps in Genomic Sequences
827-831

Organized by Guido Vanden Berghe
Mini-symposium “Numerical Methods for Solving Differential Equations”
832-833

L. Aceto, R. Pandolfi and D. Trigiante
Conservation of Polynomial Type and the Stability Problem for Linear Multistep Methods
834-837

A. Dhooghe, B. Sautois, W. Govaerts and Yu. A. Kuznetsov
MATCONT: Matlab Software for Bifurcation Study of Dynamical Systems
838-841

I. Cimrňák
Error Analysis of a Numerical Scheme Solving 3D Maxwell-Landau-Lifshitz System of Ferromagnetism
842-845

Wouter Hamelinck
An Operator Method for a Numerical Quadrature Finite Element Method for a Maxwell Eigenvalue Problem
846-849

J. Van lent and S. Vandewalle
Waveform Relaxation using Spectral Collocation in Time
850-853

E. Janňková and M. Slodička
Fix-Point Linearization Schemes for Nonlinear Steady-State Eddy Current Problems
854-857

V. Ledoux, M. Van Daele and G. Vanden Berghe
High order CP methods for the Numerical Solution of Schrödinger Problems
858-861

B. Malengier
Application of the Adjoint Equation Method for Parameter Identification Problems in Nonlinear Diffusion Equations
862-865

Z. A. Anastassi and T. E. Simos
A Dispersive-Fitted and Dissipative-Fitted Runge-Kutta Method for IVPs with Oscillating Solutions
866-868

M. N. Vrahatis and G. D. Magoulas
Advances in Computational Intelligence: Theory, Methods, Applications
869-871

A. V. Adamopoulos, S. Likothanassis, N. G. Pavlidis and M. N. Vrahatis
Short-Term Prediction of Complex Binary Data
872-875

Miguel Couceiro, Stephan Foldes and Erkko Lehtonen
On the Complexity of Representing Sets of Vertices in the N-Cube
876-877

G. D. Magoulas and A. Anastasiadis
A Nonextensive Probabilistic Model for Global Exploration of the Search Space
878-881

Y. G Petalas, E. I. Papageorgiou, K. E. Parsopoulos, P. P. Groumpos and M. N. Vrahatis
Interval Cognitive Maps
882-885

Aristoklis D. Anastasiadis and Allan Tucker
Comparison of Classification Methods Applied to Recent Gene Expression Datasets
886-888

W. Sprößig and K. Gürlebeck
Minisymposium on Dirac Operators and Applications
889-891

D. Constales, R. de Almeida and R. S. Kraußhar
Asymptotic Growth Analysis of Some PDE Related to Higher Dimensional Dirac Type Equations II
892-895

Leonardo Traversoni and Viviana Arteaga
Shallow Water Equations From a Vorticial Quaternionic Point of View
896-899
